GOVERNMENT OF KARNATAKA

## AGRICULTURAL CENSUS 2015-16 PART-II

## REPORT ON CENSUS OF AGRICULTURAL HOLDINGS IN KARNATAKA

Directorate of Economics \& Statistics
\&
State Agriculture Census Commissioner, Bengaluru

## PREFACE

1. The tenth quinquennial Agricultural Census in Karnataka 2015-16 conducted by two approaches viz., complete enumeration and sample survey. Information on the number of operational holdings and area operated was collected on complete enumeration basis where as in this report, data collected on important characteristics of holdings viz., land use, cropping pattern, crops irrigated etc., on a sample basis. Further, this report profiles data obtained through the sample survey and would definitely be of immense use in formulation of policies and programmes for agricultural development.
2. Findings are presented in three distinct chapters in this report. The first contains the introductory part, the second chapter deals with characteristics of holdings viz., ownership status, land utilization, holdings by irrigation status and net area sown and the third relates to the district-wise analysis of characteristics mentioned in chapter two.
3. It is my foremost duty to express my sincere gratitude to the Principal Secretary to Government, Revenue Department and Deputy Commissioners of the districts, who rendered full support and evinced keen interest in successful completion of the Agricultural Census 2015-16.
4. My sincere thanks are due to Dr. Vidya Dhar, ADG (Retired) \& Dr. Dalip Singh, DDG \& Agriculture Census Commissioner, Government of India, New Delhi and Sri. Goutam Saha, Scientist-D \& Chief Coordinator of Agriculture Census Project, National Institute of Electronics \& Information Technology, Kolkata and their team for their co-ordination and technical support in processing of the census data.
5. I wish to compliment all the District Statistical Officers \& their staff, the Technical and Administrative staff of Agricultural Census division of the Directorate for their wholehearted involvement at all stages of this mammoth work.
6. I wish to place on record my appreciation of the exemplary work turned out by Sri K. Narasimha Phani, Joint Director (I/c), Sri T.S. Govinda Rao, Joint Director (Retired), Sri A.R. Sridhar, Assistant Director, Smt. E. Pushpa and Sri. H.R. Shreenivas, Assistant Statistical Officers and Sri K.V. Ramesh, Assistant Statistical Officer (Retired) right from the stage of planning, execution, processing, analysis and report writing in accomplishing this herculean task.

Place: Bengaluru
Dated: 04-11-2019

## TEAM ASSOCIATED WITH PREPARATION OF THE AGRICULTURE CENSUS 2015-16 PART-II REPORT

| NAME | DESIGNATION |
| :--- | :--- |
| Sri. K. Narasimha Phani | Joint Director (I/c) |
| Sri. A.R. Sridhar | Assistant Director |
| Smt. E. Pushpa | Assistant Statistical Officer |
| Sri. H.R. Shreenivas | Assistant Statistical Officer |

## CONTESNTS

| Chapter | Title | Page No. |
| :---: | :--- | :---: |
| I | Introduction, Concepts and Definitions and <br> Methodology | $1-13$ |
| II | Analysis of Results on Characteristics of Holdings | $26-55$ |
| III | District Analysis of Operational Holdings in <br> Karnataka | $56-70$ |
|  | Tables | $71-165$ |

# REPORT ON CENSUS OF AGRICULTURAL HOLDINGS IN KARNATAKA 2015-16 

## SUMMARY OF FINDINGS

## STATE AT A GLANCE

## A.1. Ownership Status of the holdings:

A.1.1 The entire 86.81 lakhs holdings spread across 118.05 lakhs hectares of the operated area come under the "Wholly owned and self-operated" holdings.
A.1.2 Though wholly owned and self-operated holdings of marginal and small farmers (i.e., size holdings of 0.01 to 1.99 hectares) account for more than two thirds ( $80.41 \%$ ) of the total holdings under all categories, the area operated by them is more than one third (43.94\%) of the total area operated. (Table 2.1)
A.1.3 About $11.20 \%$ of the holdings covering $9.38 \%$ of the operated area under 'wholly-owned and self-operated' category belonged to scheduled castes and another $6.0 \%$ of the holdings covering $6.18 \%$ of the operated area to Scheduled tribes. (Tables 2.1, 2.1(A) \& 2.1 (B))
A.1.4 In case of Scheduled castes under wholly-owned and self-operated category, about $85.82 \%$ of the total number of holdings of marginal and small size holders put together cultivated about $57.58 \%$ of the total operated area. Similarly, in the case of Scheduled tribes, the corresponding values are about $80.23 \%$ of the total holdings covering $46.72 \%$ of the total operated area. (Tables $2.1(\mathrm{~A}) \& 2.1(\mathrm{~B})$ ).

## A. 2. Land Utilization:

A.2.1 The net cultivated area constituted $98.88 \%$ of the total operated area under all categories in 2015-16 as against $97.91 \%$ in 2010-11, registering a $0.97 \%$ increase. The proportion of net cultivated area was found to be similar among the semi medium, medium \& large classes of holdings than those of marginal and small size holdings confirming the greater practice of cultivation among the lower size of holdings. (Table 2.2).
A.2.2 The proportion of land unutilized for cultivation during 2015-16 was $1.12 \%$ compared to $2.09 \%$ in 2010-11 census revealing a decrease of $0.97 \%$ and more uncultivated land among the larger size of holdings. (Table 2.2)
A.2.3 Net area cultivated by Scheduled castes and Scheduled tribes formed $99.31 \%$ and $99.28 \%$ of the respective total area operated by them in 2015-16. The proportion of land unutilized by Scheduled tribes was $0.72 \%$ which is higher as compared to $0.69 \%$ for Scheduled castes during 2015-16. (Table 2.2(A)\& 2.2(B))
A.2.4 Percentage distribution of area under net cultivated, Semi-medium holdings accounted for the highest percentage of 27.03 \& large holdings recorded the lowest percentage of 7.24. In case of area under uncultivated, medium holdings accounted for the highest percentage of 30.11 \& large holdings recorded the lowest percentage of 12.33 . (Table 2.3)

## A.3. Irrigation:

A.3.1 Out of 112.27 lakh hectares of net area sown, the net irrigated area was $30.39 \%$ \&the un-irrigated area was $69.61 \%$. Out of this, about $22.70 \%$ were wholly irrigated, $7.69 \%$ were partly irrigated, $59.70 \%$ were wholly un-irrigated and $9.91 \%$ were partly un-irrigated. (Table 2.4)
A.3.2 In case of Scheduled caste, wholly irrigated area was 2.17 lakh hectares constituting about $80.67 \%$ of the net irrigated area and the remaining $19.33 \%$ is partly irrigated area and In case of Scheduled tribes, wholly irrigated area was 1.84 lakh hectares constituting about $81.06 \%$ of the net irrigated area and the remaining $18.94 \%$ is partly irrigated area.(Table 2.4(A) \&2.4(B))
A.3.3 The proportion of net irrigated area to the net area sown increased to $30.39 \%$ in $2015-16$ as compared to $29.48 \%$ in $2010-11$ for all social groups (Table 2.5).
A.3.4 The proportion of net irrigated area to net area sown was $25.35 \%$ in the case of Scheduled castes and $32.76 \%$ for Scheduled tribe category of holdings. It was increased in both categories when compared to the previous census 2010-11. (Table 2.5(A) and 2.5(B))
A.3.5 The percentage of wholly irrigated area under different categories of holdings shows increasing trend except under semi medium \& medium size classes for all social groups. Scheduled Caste category shows a decreasing trend except under medium\& large holdings and in case of Scheduled Tribes decreasing trend observed except under marginal \&large holdings when compared to previous census 2010-11.(Table 2.6, 2.6(A) \& 2.6(B))

The percentage of Wholly Unirrigated area under different categories of holdings shows decreasing trend except under marginal \& small size class for all social groups, the Scheduled Caste category shows decreasing trend except under marginal holdings and in case of Scheduled Tribes decreasing trend observed except under marginal \& small holdings when compared to previous census 2010-11. (Table 2.6, 2.6(A) \& 2.6(B))

## A. 4 cropping pattern:

A.4.1 The gross cropped area was 120.59 lakh hectares in $2015-16$ as against 125.20 lakh hectares in 2010-11, which show a decrease of 3.68\% (Table 2.7).
A.4.2 The net area sown in 2015-16 is 112.27 lakh hectares, whereas in the2010-11 census it was 110.81 lakh hectares, which show an increase of $1.32 \%$. The net area sown irrigated has risen by $4.44 \%$ and the unirrigated area has marginally increased by $0.01 \%$ when compared to the previous census 2010-11. (Table 2.7)
A.4.3 The intensity of cropping pattern, which is the ratio of gross cropped area to net area sown is 1.07 hectares in 2015-16 \& it was 1.13 hectares in the 2010-11 census. (Table 2.7)
A.4.4 The Scheduled castes farmers had a share of 9.18\%, while Scheduled tribes had $6.05 \%$ in the total gross cropped area. The intensity of the cropping pattern was 1.04 hectares for Scheduled castes and 1.05 hectares for Scheduled tribes. (Table 2.7, 2.7(A) \& 2.7(B))
A.4.5 The proportion of irrigated area to the total gross cropped area for all social groups was $30.42 \%$ compared to $31.20 \%$ in 2010-1 1 census. This percentage was $25.56 \%$ for Scheduled castes and $32.92 \%$ for Scheduled Tribes. (Table 2.8, 2.8(A) \& 2.8(B))
A.4.6 The percentage of net area sown to the gross cropped area for all social groups was $93.10 \%$ in $2015-16$ as against $88.51 \%$ in 2010-11 registering an increase of $4.59 \%$. This percentage was found to be $95.84 \%$ for Scheduled castes and $95.06 \%$ for Scheduled tribes in the 2015-16 census. (Table 2.9, 2.9(A) \& 2.9(B))
A.4.7 Food crops which accounted for $77.20 \%$ of the gross cropped area in 2015-16 has increased by $0.83 \%$ when compared to its share of $76.37 \%$ in the 2010-11 census. Whereas non-food crops have decreased from $23.63 \%$ in 2010-11 to $22.80 \%$ in 2015-16 census. (Table 2.9)
A.4.8 The proportion of food crops to the total gross cropped area was higher for Scheduled Caste (78.14\%) than Scheduled tribes (71.33\%), consequently in case of non-food crops, scheduled tribes accounted the highest $28.67 \%$ compared to Scheduled caste i.e. 21.86\%. (Table 2.9(A) \& 2.9 (B))
A.4.9 Cereals accounted for $41.65 \%$ of the gross cropped area, whereas the share of oilseeds was $12.31 \%$ and that of pulses was $21.15 \%$. (Table 2.9)
A.4.10 Among cereals, Maize accounted for the largest area of $27.86 \%$, followed by Paddy $26.37 \%$, Jowar $17.86 \%$, Ragi by $17.01 \%$, Bajra by 5.95 \& wheat contributed to $4.14 \%$ of the area during 2015-16. (Table 2.10)
A.4.11 The proportion of irrigated area to the total area of paddy was $65.26 \%$, which is maximum when compared to other major cereal crops. Wheat was the next highest with $43.27 \%$, followed by maize $23.30 \%$, Bajra $11.37 \%$, Jowar 11.26\%, other cereal crops had a share of $17.50 \%$ in the total area of cereal crops. (Table 2.11)
A.4.12 The intensity of cropping was maximum under small, semi medium and medium-size holdings at $1.08 \%$ each, marginal holdings at $1.06 \%$ and was the least in large holdings at 1.05\%. (Table 2.12)
A.4.13 The intensity of cropping under Scheduled caste, small holding was the highest i.e. $1.05 \%$ and in case of schedule tribes, marginal \& small holdings were the highest i.e., $1.06 \%$ each. (Table 2.12(A))
A.4.14 The percentage share of area under cereals and pulses was highest ( $27.97 \%$ and $30.26 \%$ ) in small holdings \& semi-medium holdings respectively. Under oilseeds, the semi medium group of holdings accounted for the highest share of $29.10 \%$ of the total area. (Table 2.13)
A.4.15 The percentage of area to the gross cropped area, among cereals, under Paddy marginal holdings, accounted for the highest share of $16.02 \%$. In the case of Pulses, under Tur, medium holdings accounted for the highest share of 13.84\%. Under oilseeds, semi medium holdings accounted for the highest share of 13.08\%. (Table 2.14)
A.4.16 The percentage share of the irrigated area to the total area, under Paddy \& Maize, large holdings accounted for the highest share of $72.93 \% \& 32.40 \%$ respectively. Marginal holdings had the least share of $60.98 \% \& 17.19 \%$ respectively. (Table 2.15)
A.4.17 Under pulses, semi-medium size holders accounted for the maximum share of $30 \%$ of the irrigated area $\& 30.28 \%$ of the unirrigated area. Marginal holders recorded the lowest share of $8.99 \%$ of the irrigated area and large holders accounted for the least share of $7.18 \%$ of the un-irrigated area. (Table 2.16)
A.4.18 Out of cent percent irrigated area under sugarcane, semi-medium size holders accounted for the maximum share of $30.60 \%$ and large holders recorded the lowest share of $5.38 \%$. (Table 2.17)
A.4.19Under Cotton, Semi-medium size holders recorded a higher proportion of $27.81 \%$ and marginal holders have the least proportion of $8.84 \%$ of the irrigated area. Under the un-irrigated category, semi-medium size holders recorded the highest share of $29.47 \%$ and large holders accounted for the least share of $7.36 \%$. (Table 2.18)
A.4.20Under Oilseeds, Semi-medium size holders recorded the highest proportion of $29.61 \%$, while large holders accounted for the least proportion of $6.13 \%$ of irrigated area. Under the un-irrigated category, semi- medium size holders had the highest share of $28.90 \%$ and the large holders had the least share of $6.83 \%$. (Table 2.19)
A.4.21The percentage share of the irrigated area to the total area, Sugarcane accounted for the highest share of cent percent followed by, Cereals $29.60 \%$, Oilseeds $28.43 \%$, Cotton $22.23 \%$ and Pulses 7.54\% (Table 2.20).
A.4.22 The percentage share of the irrigated area to the total area, cotton \& oilseeds was the highest for Scheduled caste i.e., $33.19 \%$ \& $26.02 \%$ respectively as against the corresponding percentage of $27.84 \%$ \& 22.84\% respectively for Scheduled tribes. Cereals \& pulses were the highest for Scheduled tribes i.e. $35.70 \%$ \& $12.62 \%$ respectively as against the corresponding percentage of $25.78 \%$ \& $5.95 \%$ for scheduled castes. In the case of Sugarcane, cent percent each proportion of irrigated area was recorded for both Schedule caste and Scheduled tribes categories. (Table 2.20(A) \& 2.20 (B))

## B. 1 District wise Summary Findings:

The percentage of area under operational holdings to the total geographical area was the highest in Vijapura district (88.79\%) \& lowest was in Uttara Kannada district (14.34\%) during 2015-16. Out of 30 districts, 17 have exceeded the state average of $61.97 \%$. (Table 3.1)

## B. 2 Ownership Status:

B.2.1 The percentage of holdings and operated area under whollyowned and the self-operated category was 100 percent in all 30 districts. Further, area under wholly-owned and self-operated category Belagavi, Bengaluru (Urban) \& Mandya districts showed an increasing trend. Gadag, Dharwad \& Kolar districts remain the same and remaining all other districts shows a decreasing trend in 2015-16 as compared to 2010-11 census. (Table 3.2)
B.2.2 The percentage of the number of holdings and operated area under wholly-owned and self-operated holdings by Scheduled caste and Scheduled Tribe categories was cent percent in all districts of Karnataka. (Table 3.2A \& 3.2B)

## B. 3 Land Utilisation:

B.3.1 Belagavi district stood first, accounting for $8.54 \%$ of net cultivated area in the State, followed by Vijapura $7.86 \%$ and Kalaburgi 7.77\%, whereas the lowest share of $0.67 \%$ was reported in Bengaluru (Urban) District (Table 3.3).
B.3.2 In the case of Scheduled castes, Kalaburgi district recorded the highest share of $11.85 \%$ of net cultivated area in the state and in the case of Scheduled tribes, Raichur district had this distinction with a share of $16.70 \%$ of net cultivated area. (Table $3.3 \mathrm{~A} \& 3.3 \mathrm{~B}$ )
B.3.3 The proportion of net cultivated area in the State accounted for $98.88 \%$ to the total area for all social groups, $99.31 \%$ in case of Scheduled caste and $99.28 \%$ under Scheduled tribe categories. (Table 3.4, 3.4A \& 3.4B)
B.3.4 The share of the uncultivated area worked out to $1.12 \%$ at the state level for all social groups. The corresponding percentages for the Scheduled caste category were found to be $0.69 \%$ \& for the Scheduled tribe, it was $0.72 \%$. (Table 3.4, 3.4A \&3.4B)
B.3.5 The proportion of uncultivated areas was highest i.e., $11.91 \%$ in Udupi district for all social groups. In the Scheduled caste category it was Udupi district with $9.57 \%$ and under Scheduled tribe, it was again maximum in Udupi district accounting 6.27\%.
(Table 3.4, 3.4A \& 3.4B)

## B. 4 Irrigation:

B.4.1 Belagavi district accounted for the highest share of $11.67 \%$ of holdings under the wholly irrigated category for all social groups, while in Scheduled caste and Scheduled tribe categories, Raichur district have attributed on the highest share of $13.67 \%$ and $25.14 \%$ respectively. (Table 3.5, 3.5A \& 3.5B)
B.4.2 As regards the share of partly irrigated and wholly unirrigated holdings, Udupi and Hassan districts have been accounted for the maximum share i.e., $9.32 \%$ and $7.72 \%$ respectively for all social groups. In the case of Scheduled caste, Vijapura district had the maximum share of $8.83 \%$ under partly irrigated holdings and Kalaburgi district accounted for the maximum share of $11.10 \%$ under wholly unirrigated holdings. In the case of Scheduled tribes, it was Chitradurga that had the maximum share of $11.28 \%$ under partly irrigated and $10.62 \%$ under wholly un-irrigated holdings.
(Table 3.5, 3.5A \& 3.5B)
B.4.3 The percentage of wholly and partly irrigated holdings to the total holdings of the state it was highest in Dakshina Kannada district (84.46\%), followed by Udupi district (68.96\%), whereas the proportion of wholly un-irrigated holdings was highest in Kodagu district (93.71\%), followed by Kalaburgi district (92.99\%). (Table 3.6)
B.4.4 In case of Scheduled castes \& Scheduled tribes, the maximum share of holdings irrigated was $78.05 \%$ \& $86.24 \%$ respectively in Dakshina Kannada district. The proportion of wholly unirrigated holdings was highest in Kalaburgi district (95.20\%) for Scheduled caste and for Scheduled Tribes category it was Kodagu district (96.03\%).
(Table 3.6A \& 3.6B)
B.4.5 The percentage share of the net irrigated area to the state total was highest in Belagavi district (13.56\%) and lowest in Bengaluru (Urban) (0.30\%) for all social groups. For both Scheduled caste \& Scheduled tribe categories, Raichur district accounted for the highest share of $22.13 \%$ \& $29.31 \%$ respectively and lowest in Kodagu distric $\dagger$ with $0.13 \% ~ \& ~ 0.08 \%$ respectively. (Table 3.8, 3.8A \& 3.8B)
B.4.6 The percentage share of net irrigated area to the net area sown was maximum in Dakshina Kannada district i.e. $74.30 \%$ for all social groups, $73.87 \%$ for Schedule Caste category\& $79.32 \%$ for Scheduled tribes category. (Table 3.9, 3.9A \& 3.9B)

## B. 5 Cropping Pattern:

B.5.1 The percentage share of gross cropped area to the state total was highest in Belagavi district accounting for 11.36 lakh hectares attributing $9.42 \%$ and Bengaluru (Urban) district is lowest with 0.54 lakh hectares attributing $0.45 \%$ for all social groups. (Table 3.10)
B.5.2 The percentage share of the gross cropped area to the state total under Scheduled caste category was highest in Kalaburgi distric $\dagger$ with $11.73 \%$ and lowest in Udupi district with $0.18 \%$ and in case of Scheduled tribe, it was highest in Raichur district with $16.73 \%$ and lowest in Bengaluru (Urban) district with 0.06\%.(Table 3.10(A) \& 3.10(B))
B.5.3 The percentage share of gross irrigated area to the gross cropped area, Dakshina Kannada district accounted for the maximum percentage of 74.23, followed by Shivamogga (56.35\%) \& Bagalkote (51.77\%) and it was lowest in Kalaburgi district (5.63\%) for all social group. Under the Scheduled caste \&Scheduled Tribe category, Dakshina Kannada district registered the highest proportion of $73.75 \% \& 79.29 \%$ respectively and it was lowest in Kalaburgi district i.e. $3.54 \%$ \& $9.07 \%$ respectively. (Table 3.11, 3.11 (A) \& 3.11 (B))
B.5.4 The overall intensity of cropping was maximum in Gadag at 1.400 for All social groups. In the case of Scheduled Castes \& Scheduled tribes, it was maximum in Bagalkote at $1.434 \& 1.428$ respectively. (Table 3.12, 3.12A \& 3.12B)
B.5.5 The intensity of cropping for the state for major size classes of holding was highest in Small group (1.080) and is very closely followed by semi-medium (1.079), medium (1.077), marginal (1.062) \& large group (1.054). (Table 3.13)
B.5.6 Under marginal, small, semi-medium \& medium group of holdings Gadag district had accounted for the highest intensity of cropping at $1.471,1.481,1.432 \& 1.331$ respectively. Under the large group of holdings, Dharwad district had accounted for the highest intensity of cropping at 1.271. (Table 3.13)
B.5.7 Belagavi district is accounted for the highest share of about $9.87 \%$ under all food crops \& $7.92 \%$ under Non-food crops of the state total area. While Bengaluru (Urban) district accounted for the lowest share of about $0.35 \%$ under all food crops \& Uttara Kannada district was least with $0.36 \%$ under Non-food crops of the state total area for all social groups. (Table 3.14)

In the case of Scheduled Caste\& Scheduled tribes category, Chitradurga district accounted for the highest share of about $17.62 \%$ \& $30.53 \%$ respectively of the state total area under Oilseeds\& Raichur district accounted for the highest share of about $35.47 \%$ \& $32.17 \%$ under Cotton.(Table 3.14(A)\& 3.14(B))
B.5.8 Shivamogga district is accounted for the highest share of about $94.96 \%$ of the gross cropped area under all food crops, followed by Davanagere district 92.45\%. Kodagu district scored for the highest share of about $74.66 \%$ of the gross cropped area under Non-food crops for all social groups. (Table 3.15)
B.5.9 Under cereals, Davanagere district is accounted for the highest share of about $79 \%$, while under pulses, Kalaburgi district had this distinction with $81.24 \%$ and Chitradurga district is highest with $36.77 \%$ of the gross cropped area under Oilseeds for all social groups. (Table 3.15)
B.5.10 In respect of individual crops, the distinction of the highest proportion of cropped area went to Uttara Kannada district under paddy (61.63\%), Chamarajanagar district under Jowar (23.80\%), Kalaburgi district under Tur (64.39\%) and Yadgir district under fibers (27.49\%). (Table 3.15)
B.5.11 The percentage of irrigated area to the total area, under cereals Yadgir district was highest with $70.69 \%$ which is more than twice of the state average (29.60\%) \& the state average has exceeded in 11 districts. In respect of pulses, the maximum was recorded in Shivamogga district (59.15\%), while the state average (7.54\%) was exceeded in 16 districts. (Table 3.16)
B.5.12 The entire area under sugarcane in all the districts in the State was irrigated. In the case of oilseeds, Dakshina Kannada district had the highest share of $94.72 \%$ of the area under irrigation and in 16 districts it surpassed the state average of $\mathbf{2 8 . 4 3 \%}$. (Table 3.16 )
B.5.13 In respect of cotton, Kolar \& Bengaluru (Rural) districts accounted for cent percent of irrigated area and 15 districts have reported above the state average of 22.23 \%. (Table 3.16)
B.5.14 The proportion of irrigated area under cereals was highest in Raichur district (66.57\%) in case of Scheduled caste and Yadgir district (74.57\%) in case of Scheduled tribes. In respect of pulses, Dakshina Kannada district with cent percent under Scheduled caste and Shivamogga district with $60 \%$ under Scheduled tribes are higher. (Table 3.16A \& 3.16B)
B.5.15 Under oilseeds, the percentage of irrigated areas in Bengaluru (Urban) district the highest with a share of $93.94 \%$ under Scheduled caste and with a share of $97.50 \%$ in case of Scheduled Tribe category. For cotton cultivation, Mandya and Chikkaballapur districts recorded for the highest share of cent percent under Scheduled caste and Scheduled Tribe category respectively. (Table 3.16(A)\& $3.16(B)$ )

## CHAPTER - I

## INTRODUCTION, CONCEPTS AND DEFINITIONS AND METHODOLOGY

## Introduction:

The agricultural census is conducted once in five years since 1970-71. So far nine agricultural censuses have been conducted, the tenth being a 2015-16 census.

This census is conducted with the objective of collecting different characteristics of operational holdings in three stages. In the first stage, the data on the number and size of operational holdings by cultivators are re tabulated from RTCs of all villages in Karnataka. In the second stage the details on land use pattern, cropping pattern were collected on a sampling basis with a sample size of 20 percent of villages which are covered under the timely reporting scheme. Finally as a follow-up of the survey "Input Survey" is conducted with the main objective of collection of data related to the number of parcels, multiple cropping, land use pattern, use of manures, fertilizers, agricultural implements and agricultural credits availed by cultivators selecting $7 \%$ of the total number of villages in the State.

These reports generated are of immense use to the Government of India for compiling and for taking up of policy decisions pertaining to agricultural activities in the country. Besides, its usage was also felt by Government machineries in the state, Farmers, Planners, Researchers and other data users.

## CONCEPTS AND DEFINITIONS

## 1. Operational Holding:

All land which is used wholly or partly for agricultural production and is operated as one technical unit by one person alone or with others without regard to the title, legal form, size or location.

## 2. Technical Unit:

A technical unit has been defined as that unit which is under the same management and with the same means of production such as labour force, machinery and animals.

## 3. Agricultural Production:

Agricultural production includes growing of field crops, fruits, grapes, seeds, tree nurseries (except those of afforest trees), vegetables and flowers, production of coffee, tea, cocoa, rubber, jute, oilseeds, fodder grass, etc. Growing of Grass would be treated as a crop if special efforts are made to raise it.

## 4. Operated Area:

The operated area would include both cultivated and uncultivated areas, provided part of it is put to agricultural production during the reference period. For instance, an operational holding consists, Scheduled Tribes of four survey numbers, of which one survey number is put to non-agricultural uses, the total area of the operational holding will be equal to the total geographical area of all the four survey numbers.

It would also cover the land occupied by the farm buildings, including the house of the holder, provided such buildings are within the cultivated area. If the farm buildings are located outside the cultivated area and are covered under Abadi area, such buildings would not be included.

The operated area would exclude government forest land, government wasteland, village common grazing land, Abadi area, etc. Government wasteland allotted to an individual is included in the holding.

The entire area of a holding (the area of all the survey numbers of an operational holding) put to non-agricultural use and/or is under old fallow, will not be considered as the operated area. Even the entire area of operational holding under current fallow during the reference year would still be considered an operational holding.

In some cases, the land is divided amongst all the members of a family. If it is divided between the husband, wife and minor children and husband as the head of the family is doing the cultivation, the land may appropriately be treated as one operational holding.

There might be cases wherein the records, a holding is shown jointly in the name of more than one co-sharer while in fact the land may have been privately divided and the co-sharers are independently cultivating. In such cases where there is no dispute, they should be treated as many operational holdings as the number of independent cultivators.

For cultivated Areas in the State for Scheduled Tribes, no detailed land records are prepared. In the absence of revenue records and revenue agency, such areas are excluded from the Census. The operated area may comprise of.

## a) Land owned and self-operated:

Land for which the cultivator has the right to permanent heritable possession would is owned. This would include:
i) Land held from Government or others under grant or lease or assignment with right of permanent heritable possession with or without right of transfer.
ii) Land operated under perpetual lease.

## Self-operated land would include:

i) Self-cultivation.
ii) Land cultivated through members of the family.
iii) Land cultivated with the help of hired labour.

Land owned and self-operated should not include land leased out to others.

## b) An area otherwise operated:

This would include encroachment land forcibly occupied, unauthorized or land in dispute, etc. which cannot be treated as owned as per the definitions are given above.

## 5. Operational holder:

An operational holder is a person who has the responsibility for the operation of an agricultural holding and who exercises the technical initiative and is responsible for its operation. He may have full economic responsibility or may share it with others. The operational holder may be Individual/Joint/ Institutional.

## a) Individual:

A holding being operated either by one person alone or by a group of persons who are members of the same household is considered as an individual holding.

## b) Joint:

If two or more persons belonging to different households are partners in the economic and technical responsibility for the operation of an agricultural holding, such holding would be considered as joint.

## c) Institutional:

Holdings such as government farms, sugarcane factories, cooperative farms, lands managed by the trust would be treated as institutional.

## Resident and non-resident operational holder:

All the cultivators residing in a particular village and cultivating some land are resident cultivators of that village irrespective of whether they are cultivating land within that village or outside. A resident cultivator may have (i) entire area of the holding located in the village of his residence (ii) partly within the village of residence and partly outside and (iii) entirely outside the village of residence.

An operational holder operating some area outside the tehsil in which he resides will not be treated as a resident cultivator of the village in which he resides for Agricultural Census purpose but as a resident cultivator of the village in the tehsil where his operational area falls.

If a cultivator who resides outside that village operates the area in a particular village, he is a non-resident operational holder for that area. However, an operational holder who is a resident of a village lying outside the tehsil in which the holding is located will be treated as a resident operational holder of the village where the area is located.

## Complete/part holding:

A holding is said to be complete if its entire operated area is located in one village and if it is spread over more than one village, it is called as part holding.

Taluk would be taken as the outer limit for the consolidation of part holdings.

Wholly irrigated, partly irrigated and wholly unirrigated holdings:

If the entire net area sown in an operational holding is equal to the net area irrigated, such holding is considered as wholly irrigated holding. In case part of the net sown area is irrigated, it will be partly irrigated and if the entire sown area has not received any irrigation during the year of reference, such holding would be wholly unirrigated.

## 6. Land utilization:

Operated area is classified into the following five broad categories:
a) Net area sown.
b) Current fallows.
c) Area uncultivated

## The area uncultivated, include the following:

i) Fallow land other than current fallow
ii) Other uncultivated land excluding fallow land
iii) Culturable waste; and
iv) Land not available for cultivation.

## a) Net area sown:

Total area sown with crops and orchards, counting area sown more than once in the same year, only once.

## b) Current fallows:

Cropped area, which are kept fallow during the current year but was cultivated in the previous year. For example with any seedling, area is not cropped in the same year, it may be treated as current fallow.

## c) Area uncultivated:

## 1. Fallow land other than current fallows:

All lands which are taken up for cultivation but are temporarily out of cultivation for a period of not less than one year and not more than five years. The reasons for keeping such lands fallow may be one or more of the following:
i) The poverty of the cultivator.
ii) Inadequate supply of water.
iii) Malarial climate.
iv) Silting of canals and rivers and
v) Un-remunerative nature of farming.
2. Other Uncultivated lands excluding fallow are given below:
i) Permanent pastures and other grazing lands:

All grazing lands, whether they are permanent pastures and meadows or not. Village common grazing lands would, however, be excluded.

## ii) Land under miscellaneous tree crops and groves not included in net area sown:

Cultivable land which is not included in the net area sown but is put to some agricultural use. Land under casuarinas trees, thatching, grasses, bamboo bushes and other groves for fuel which are not included under orchards would be covered under this category.

## 3. Culturable waste:

All lands available for cultivation whether not taken up for cultivation or taken up for cultivation once but not cultivated during the current year and the last five years or more in succession, for one reason or the other. Such lands may be either wholly or partly covered with shrubs and jungles which are not put to any use. Land once cultivated but not cultivated for five years in succession would also be included.

## 4. Land not available for cultivation:

This would include forest area, area put to non-agricultural use, barren and uncultivable land.

## i) Forest:

All lands classed as 'Forest' under any legal enactment dealing with Forests or administered as forests, whether State-owned or private and whether wooded or maintained as potential forest land.

The area of crops raised in the forest and grazing land or areas open for grazing within the forest would be included under the Forest area. The only private forest would be covered for the purposes of the Agricultural Census.

## ii) Area put to Non-Agricultural use:

All lands occupied by buildings and other lands put to use other than agriculture. Such lands within the cultivated holding should be covered in the Census.
iii) Barren and uncultivable Land:

All barren and uncultivated land within the cultivated holding.

## METHODOLOGY:

The data on land use, cropping pattern both in irrigated and unirrigated areas for all social groups, Scheduled castes and Scheduled tribes for the year 2015-16 (July 2015 - June 2016) were collected through re-tabulation of data from village records in respect of a 20 percent sample of villages which were selected under timely reporting scheme.

## Schedules:

The following soft instruments were used for obtaining information for the Agricultural Census.

Schedule LI: List of resident operational holders operating in the village.
Schedule L2: List of non-resident operational holders operating in the village.

Schedule L3: Village summary for area tally at the village level.
Schedule T-1: List of operational holdings arranged according to a category of holdings and social groups.

Schedule H: Essential characteristics of each operational holding such as land utilization, irrigation and crops grown, etc.

Schedule SS: Summary of the selected village for schedule - H.

## TABLES:

The data collected through the Agricultural Census was processed and presented in the form of five main tables as indicated below.

Table-1: Number and area of operational holdings.
Table-2: Number and area of operational holdings by ownership status.
Table-3: Area under different land uses.

Table-4: Distribution of the number of operational holdings by irrigation status.

Table-5: Irrigated and un-irrigated area under different crops.
This report includes the analysis of results contained in Table 2.1 to3.16B.

## SIZE CLASSES OF HOLDINGS:

Data relating to number and area of operational holdings, viz., Table-1 is presented in the following ten size-classes and five broad size-groups of operational holdings.

## Marginal Holdings (in hectares):

(1) Below 0.5
(2) $0.5-0.99$

## Small holdings (in hectares):

(3) $1.0-1.99$

## Semi-medium holdings (in hectares):

(4) 2.0.-2.99
(5) $3.0-3.99$

## Medium holdings (in hectares):

(6) 4.0-4.99
(7) $5.0-7.49$
(8) $7.5-9.99$

## Large holdings (in hectares):

(9) 10.0-19.99
(10) 20.0 and above

## GROUPS:

The analysis of data in this Report is presented according to five broad size-groups viz., Marginal, Small, Semi-medium, Medium and Large holdings.

## PROCESSING OF THE DATA AND TABULATION:

The data collected about the principal characteristics of holdings, on a sample survey basis, in the prescribed (' H ') schedules were thoroughly scrutinized before entry at the state headquarters \& sent to the National Institute of Electronics \&Information Technology, Kolkata for the generation of tables. The Government of India approved the tabulated results during May- 2019.

## ESTIMATION PROCEDURE:

(i) Table-1 Depicts the number and area of Operational holdings by different size classes on the basis of complete enumeration of all villages and is presented in Part-I of Agricultural Census.
(ii) Table 2-5 were generated on the basis of complete enumeration in 20 percent of the villages selected at random coinciding with the TRS 2015-16 sample. The principal characteristics incorporated in these tables were estimated by the `Ratio Estimate' method by using the
number of holdings/operated areas in the relevant size class as the auxiliary variate.

The estimates of primary characteristics of tables 2 to 5B were worked out using the ratio estimate method mentioned below:

$$
\begin{gathered}
\sum_{Y i(k)}^{n} Y_{\mathrm{R}}(\mathrm{~K})=\frac{\sum_{\substack{x(\mathrm{~K}) \\
i=1}}^{n}}{\sum_{x i}} X(k)
\end{gathered}
$$

where
$\wedge$
$Y_{R}(K)$ : Estimate of characteristics
$Y_{i}(k)$ : Sum total of the values of the characteristics understudy for all holdings belonging to $k^{\text {th }}$ size class in the $i^{\text {th }}$ village in the sample;

$$
k=2,3, \ldots \ldots .14, \quad i=1,2, \ldots \ldots . n
$$

$\mathrm{X}_{\mathrm{i}}(\mathrm{k})$ : Auxiliary variate i.e., the total number of operational holdings/operated area (as the case may be) in the $k^{\text {th }}$ size class in $i^{\text {th }}$ village in the sample.
$\mathrm{X}(\mathrm{k})$ : Total number of operational holdings/operated areas in the $\mathrm{k}^{\text {th }}$ size class in the stratum as available from table-1 which is based on complete enumeration.

N
$X(K)=\sum X_{i}(k)$
$i=1$

N : Number of villages in the stratum (taluk)
n : Number of villages selected in the stratum.

## CHAPTER - II

## ANALYSIS OF RESULTS ON CHARACTERISTICS OF HOLDINGS

## OWNERSHIP STATUS:

2.1 The data on the ownership status of operational holdings were collected in respect of the two main categories viz., "Wholly-owned and Self-Operated" and "Otherwise operated". Particulars of the tenancy are not collected since it was abolished in the state since 1974 by law.
2.2 'Wholly-owned' is the land on which the cultivator has permanent inheritance and `self-operated' land means the land cultivated by the cultivator himself or through members of his family or by engaging hired labour.
2.3 The land 'otherwise operated' means, the land illegally occupied or encroached as unauthorized cultivation or cultivated by tenants without the right of ownership.
2.4 In Table 2.1 the distribution of the number of operational holdings and area operated according to the two categories are displayed. It is Significant that $100 \%$ of the holdings wholly-owned were self-operated.
2.5 The average size of operational holdings under the wholly-owned and self-operated' category for all social groups was 1.36 hectares. The number of operational holdings of large farmers was found to be the average area owned by them was 15.45 hectares. The marginal farmers who account for the maximum number of operational holdings possess the lowest average area of 0.44 hectares. The medium farmers are ranked second with 5.69
hectares of average area, followed by semi-medium farmers with 2.67 hectares and small farmers with 1.40 hectares. (Table-2, Part-I)
2.6 The distribution of the number of operational holdings and their area operated according to ownership status in respect of scheduled castes are furnished in Table 2.1(A) and in the case of Scheduled tribes in table 2.1 (B). The number of operational holdings and area operated by both the scheduled castes and scheduled tribes was predominantly wholly owned and self-operated. (Table 2.1)

Agricultural Census 2015-16
Distribution of No. of Operational Holdings \& Area operated according to ownership status of wholly owned \& self operated in Karnataka for All Social Groups

2.7 Out of the 86.81 lakh operational holdings, Scheduled castes account for 9.73 lakhs ( 11.21 percent) and the scheduled tribes for 5.21 lakhs (6\%). In the total area of operational holdings of 118.05 lakh hectares, the share of scheduled castes was 11.08 lakh hectares (9.38\%) and of scheduled tribes 7.30 lakh hectares (6.18\%).(Table 2.1, 2.1 (A) \& (B))

## Agricultural Census 2015-16

Distribution of No. of Operational Holdings \& Area operated according to ownership status of wholly owned \& self operated in Karnataka for Scheduled Tribes

$\square$ No. of Holdings (in 000's) $\triangle$ Area (in 000' ha)
2.8 The average area of operational holdings of scheduled tribes was found to be 1.40 hectares, comparatively more than 1.14 hectares of scheduled castes distribution. (Table-6 of Part I)
2.9 With regard to distribution of the pattern of operational holdings of scheduled castes, the average area owned by large farmers was 15.43 hectares, followed by medium farmers with 5.53 hectares, semi-medium farmers 2.59 hectares, small farmers 1.39 hectares and marginal farmers 0.47 hectares. (Table-6 of Part I)

The pattern is similar in respect of scheduled tribes. The average area possessed by a large farmer was 16.18 hectares, followed by medium farmers 5.64 hectares, semi-medium farmers 2.65 hectares, small farmers 1.40 hectares and marginal farmers 0.49 hectares. It surfaces that, the average area of Scheduled Tribe farmer was slightly more than that of Scheduled Caste farmer in all categories of holdings. (Table-6 of Part-I)
2.10 Further, the number of operational holdings and area operated under wholly-owned and self-operated' category were found to be 100 percent for all the five categories of holdings for both scheduled castes and scheduled tribes.

## LAND UTILISATION:

2.11 Land utilization under Agricultural Census is three folds only and not nine fold as in Agricultural Statistics.

The nine-fold classification which compressed to three is indicated below.

| Land use classification as per Agricultural Census | Corresponding Nine fold classification of land use in Agricultural Statistics |
| :---: | :---: |
| 1. Net area sown | 1. Net area sown |
| 2. Current fallows | 2. Current fallows |
| 3. Area not cultivated | 3. Fallows other than current fallows |
|  | 4. Permanent pastures and other grazing lands |
|  | 5. Land under miscellaneous tree crops and groves not included in the net area sown. |
|  | 6. Forests. |
|  | 7. Area put to non-agricultural uses (Land occupied by buildings, roads, railways, etc.) |
|  | 8. Barren and uncultivable land |
|  | 9. Culturable waste. |

2.12 The percentage distribution of the area under net cultivated\& uncultivated area are shown in Table-2.2

The net cultivated area, which is the aggregate of net area sown and current fallow accounts for $98.88 \%$ of the total operated area. This is 0.97 percent more than the area operated during 201011 census ( 97.91 percent). Uncultivated lands account for 1.12 percent of the total operated area and have come down by 0.97 percent compared to the (2.09\%) 2010-11 census.
2.13 The percentage of net cultivated area, within each category of holdings, indicates the level of utilization of land for cultivation. Small holdings account for the highest percentage of $99.19 \%$ to the total operated area, followed by successively by Marginal class of holdings (99.13\%), Semi-medium holdings (98.97\%), Medium holdings ( $98.45 \%$ ) and large holdings ( $98.11 \%$ ). The land left for uncultivated, large holdings were found to be $1.89 \%$ of the total operated area is the highest and the least is $0.81 \%$ in case of small holdings, indicating better utilization of land under this category. In respect of the remaining holdings, it ranges from $0.87 \%$ to $1.55 \%$.
2.14 Tables $2.2(\mathrm{~A})$ and $2.2(\mathrm{~B})$ reflect the percentage of area under mainland uses to the total operated area for different size groups of holdings for scheduled castes and scheduled tribes.
2.15 Of the total area operated, 99.31 percent is the net cultivated area for all the Scheduled Caste holders together. Category wise the net area cultivated ranged from 98.54 percent in the case of large farmers to 99.52 percent in the case of marginal holders. Compared to the previous quinquennial census there is a slight decrease of $0.79 \%$ of holdings of the Scheduled Castes remained uncultivated and the highest non-utilization was 1.46 percent in respect of large holders and the lowest was 0.48 percent as regards marginal holders. (Table 2.2(A))
2.16 The said analyses reveal that it is the large farmers whose lands are not put to as much use as the other categories.

Proceeding to the social group of Schedule Tribes, it surfaces that the net cultivated area by these holders constitutes 99.28 percent in the total and it decreases from 99.51 percent in the case of the marginal category to 98.55 percent in the case of large category.

There is a decreasing trend observed in the uncultivated area when compared to the previous census 2010-11. (Table 2.2(B))
2.17 There is yet another component viz., the land available for cultivation which is also a pointer to the utilization of land and its share under each size group and is exhibited in Table 2.3.

A perusal of this table indicates that the percentage of land available for cultivation increases in respect of the marginal and small class of holdings during the current census from the previous one, whereas in contrast, in the case of semi-medium, medium and the large class of holdings it had decreased.
2.18 Of the total net cultivated area, semi-medium class holdings recorded the highest percentage of 27.03, but compared to the previous census it has decreased by $0.92 \%$. The lowest percentage of the net cultivated area was found to be 7.24 percent in the case of a large class of holdings, a decrease of $0.84 \%$ from the previous census. In the case of medium-class holdings, it had come down by 2.16 percent. Marginal and small classes increased by 2.44 percent and 1.48 percent respectively compared with the previous census. (Table 2.3)
2.19 Examination of the land utilization of all the social groups by major size group reveals that the net cultivated area of marginal holders was less than 20 percent. But this was more than 20 percent in the case of the small, semi-medium \& medium holders and once-again it was less than 10 percent in the case of large ones. On similar lines it is found that out of the total lands un-cultivated, the highest was by the medium farmers, which constituted 30.11 percent, followed by semi-medium 24.81 percent, 19.07 percent in respect of small farmers. (Table 2.3)

## HOLDINGS BY IRRIGATION STATUS AND AREA IRRIGATED:

2.20 Out of 112.27 lakh hectares of net area sown in the state, 34.12 lakh hectares were net irrigated \& 78.15 lakh hectares were net un-irigated. (Table 2.4)

Out of 34.12 lakh hectares of net irrigated area in the state, 25.48 lakh hectares were wholly irrigated \& 8.64 lakh hectares were partly irrigated. Out of 78.15 lakh hectares of net un-irrigated, 67.02 lakh hectares were wholly un-irrigated \&11.13 lakh hectares were partly un-irigated. (Table 2.4)

## IRRIGATION STATUS OF SCHEDULED CASTES AND SCHEDULED TRIBES HOLDINGS:

2.21 The situation in respect of Scheduled Castes and Tribes as far as the irrigation status is concerned is not very much different from the overall perspective. In respect of Scheduled Castes, out of the 10.61 lakh hectares of net area sown, wholly irrigated was only 2.17 lakh hectares, wholly un-irrigated was as much as 7.25 lakh hectares. The picture in respect of Scheduled Tribes is not very different as can be seen from table $2.4(\mathrm{~B})$. In this aggregate 6.93 lakh hectares of the net area sown, the wholly unirrigated was the highest at 4.07 lakh hectares and the wholly irrigated was a mere 1.84 lakh hectares. All these are evidence of the fact that much needs to be done to improve the irrigation infrastructure in the state to bring more and more land of all social groups under irrigation to realize better productivity on the one hand and to improve the economic condition of the tillers of the soil.
2.22 The net area is sown under the scheduled castes category was estimated to be 10.61 lakh hectares and in the case of scheduled tribes, it was 6.93 lakh hectares. Compared to the previous census
the corresponding increase was found to be 7.38 percent among scheduled castes and 7.44 percent for scheduled tribes.
(Table 2.4(A) and 2.4(B))
2.23 The net irrigated area in case of scheduled castes was 2.69 lakh hectares and that of scheduled tribes it was 2.27 lakh hectares and when compared to the 2010-11 census, the corresponding Increase in percentage figures were $26.29 \%$ and $37.58 \%$ for scheduled castes and scheduled tribes respectively.
(Table 2.4(A) and 2.4(B))
2.24 The percentage share of net area sown under wholly \& partly irrigated holdings for scheduled castes was $20.45 \& 4.90$ respectively and that of scheduled tribes it was $26.55 \& 6.21$ respectively. (Table 2.4(A) and 2.4(B))
2.25 The percentage share of net area sown under wholly \& partly unirrigated holdings for scheduled castes was 68.33 \& 6.32 respectively and that of scheduled tribes it was $58.73 \& 8.51$ respectively.(Table 2.4(A) and 2.4(B))

## PERCENTAGE OF IRRIGATED AREA TO NET AREA SOWN:

2.26 In Table 2.5 the percentages of net area irrigated to net area sown by major size groups of holdings are furnished. Between 2010-11 and 2015-16 this has gone up by 0.91 percent.
2.27 The percentage share of net irrigated area to net area sown by size class, semi-medium holdings has the highest percentage (31.12\%), followed by large holdings (31.07\%), medium (30.82\%), marginal holdings (30.06\%) and small holdings (29.34\%) being the least. (Table 2.5)
2.28 In Table 2.5A and 2.5B the distribution of net area irrigated and net area sown and its percentage for scheduled castes and scheduled tribes are furnished.

The percentage of net area irrigated to net area sown was higher in respect of scheduled tribes 32.76 percent than of scheduled castes 25.35 percent significantly. Also compared to the previous census, there was an increase of 3.79 percent in respect of Scheduled caste, while it was 7.33 percent in the case of Scheduled Tribes.
2.29 The large holdings reported the highest percentage of the irrigated area among Scheduled Castes at $60.98 \%$ \& $50 \%$ in the case of Scheduled Tribes. The lowest was under small holdings for Scheduled castes $22.63 \%$ and $29.06 \%$ for scheduled tribes.

## DISTRIBUTION OF HOLDINGS BY IRRIGATION STATUS:

2.30 Under wholly irrigated categories, marginal holdings accounted for as much as 58.58 percent of the total holdings is the highest and it was a mere 0.51 percent in case of large holdings is the lowest. With regard to wholly irrigated area, small holdings registered the highest percentage of 27.55 , while once again the large holdings had the least share ( $6.69 \%$ ). These data show insight into the shortfalls in irrigation in the state. (Table 2.6)
2.31 Under partly irrigated category, the highest percentage share of the number of holdings was 30.99 percent in case of small holdings which is the highest and large holdings was least with $1.83 \%$. With regard to partly irrigated area, semi-medium holdings registered the highest percentage of 33.16 and marginal holdings were least with 6.71\%. (Table 2.6)
2.32 Under wholly un-irigated category, the highest percentage share of the number of holdings was $55.69 \%$ in case of marginal holdings, while the lowest i.e., $0.52 \%$ was in case of large holdings. The share of the net unirrigated area of small class holdings recorded 28.77 percent which is the highest and the lowest share of 6.06 percent was in case of large holdings (Table 2.6).
2.33 In the case of both Scheduled Castes and Scheduled Tribes, marginal holders held the highest share of $62.03 \%$ \& $54.08 \%$ respectively, while large holders held the lowest share of $0.69 \%$ and $0.85 \%$ respectively in the wholly irrigated holdings. The net area irrigated under the wholly irrigated category, small holdings once again recorded the highest share of 30.31 percent of the total area for scheduled castes \& $26.70 \%$ for scheduled tribes. The least percentage of 10.81 and 10.29 are scored by large holdings of Scheduled castes and Scheduled tribes respectively.(Table 2.6(A) and 2.6(B))
2.34 In the case of both Schedule Caste \& Schedule Tribes, small holders held the highest percentage shares in partly irrigated holdings respectively and the figures were $37.68 \%$ \& $32.43 \%$. Under the partly irrigated category, semi-medium holdings recorded the highest share of 36.43 percent of the total area for scheduled castes \& $35.52 \%$ for scheduled tribes. The least share was reported in large holdings for Scheduled castes i.e. 2.99 percent and 6.11 percent under marginal holdings in case of Scheduled tribes. (Table 2.6(A) and $2.6(B))$.
2.35 As regards the distribution of unirrigated holdings of Scheduled Castes, marginal holdings had the largest share (58.31\%) and the large holdings had the least ( $0.15 \%$ ). The difference between the largest and smallest was more than 100 times. About Scheduled Tribes also, the same pattern of marginal and large farmers
accounting for the largest (52.77\%) and smallest ( $0.32 \%$ ) shares was noticed. The net un-irrigated area was highest in small holdings in respect of both Scheduled Castes and Scheduled Tribes i.e. 35.88\% \& $33.10 \%$ respectively (Table 2.6(A) and $2.6(\mathrm{~B})$ ).

## AREA UNDER PRINCIPAL CROPS:

2.36 The estimated gross cropped area as per agricultural census for 2015-16 was 120.59 lakh hectares and according to the Annual Season and Crop Report (ASCR), it was 120.08 lakh hectares. Thus there is a difference of 0.51 lakh hectares in the estimated area between the two. With regard to gross cropped area under an irrigated category, the estimated area as in the Agricultural census was 36.68 lakh hectares and as per ASCR, it was 37.42 lakh hectares showing a $1.97 \%$ shortfall. For the unirrigated category, the estimated area under agricultural census was 83.91 lakh hectares and according to ASCR 82.66 lakh hectares showing a $1.51 \%$ percent increase (Table 2.7 \& ASCR report).
2.37 The gross cropped area in 2015-16 which was 120.59 lakh hectares compared to the 2010-11 census figures of 125.20 lakh hectares, indicating a decrease of $3.68 \%$. The gross cropped area under irrigated \& un-irrigated conditions showed a decrease of 6.09 percent\& 2.58 percent respectively compared to the 2010-11 census. (Table 2.7)

The total net area sown was 112.27 lakh hectares as against the previous census figure of 110.81 lakh hectares. (1.32 percent increase). The net area sown was 34.12 lakh hectares under irrigated conditions against 32.67 lakh hectares of 2010-11 census increased by 4.44 percent. Pertaining to the un-irrigated condition it was 78.15 lakh hectares in the current census against 78.14 lakh
hectares during the 2010-11 census \& increased by 0.01 percent. (Table 2.7)
2.38 Further, the intensity of cropping pattern, the indicator revealing the extent of area sown more than once for multiple cropping is calculated by working out the ratio of gross cropped area to net area sown.

The intensity of cropping in 2015-16 has arrived at 1.07 while the corresponding figure for the 2010-11 census was 1.13. In the case of the irrigated area it was 1.08 and for unirrigated 1.07 in the current census. (Table 2.7)

Agricultural Census 2015-16
Area under major principal crops in Karnataka for All Social Groups

2.39In Tables $2.7(A)$ and $2.7(B)$, the area irrigated and unirrigated under principal crops for Scheduled castes and Scheduled tribes are furnished.

The share of gross cropped area of Scheduled castes was around 9.18 percent in the total area under all social groups and for Scheduled tribes, it was 6.04 percent. The net area sown for Scheduled castes was 10.61 lakh hectares and compared to the corresponding period of 2010-11 census of 9.87 lakh hectares, it had registered an increase of 7.50 percent and in case of Scheduled tribes the net area is sown was 6.93 lakh hectares and compared to 2010-11 figures of 6.45 lakh hectares, it had increased by over 7.44 percent. The intensity of cropping pattern for Scheduled castes was 1.04, while it was marginally higher at 1.05 for Scheduled tribes. Under irrigated conditions, the intensity of cropping for Scheduled castes \& Scheduled Tribes was 1.05\& 1.06 respectively. In the case of unirrigated conditions, the corresponding figures for Scheduled castes \& Scheduled Tribes were 1.04 \& 1.05 respectively.
(Tables 2.7(A) and 2.7(B))

Agricultural Census 2015-16
Area under major principal crops in Karnataka for Scheduled Tribes

2.40 Area under all food crops for Scheduled tribes which were 5.20 lakh hectares has registered a decrease of 1.14 percent compared to the previous 2010-11 census figure of 5.26 lakh hectares. The decrease in the irrigated area was 3.06 percent and in the unirrigated area, it is constant. In the case of scheduled castes, the estimated area of food crops was 8.65 lakh hectares and compared to 8.59 lakh hectares in 2010-11, there is an increase of 0.70 percent. Irrigated crops showed a 4.82 percent decrease and the area under unirrigated crops showed an increase of 2.69 percent between the two census periods. Thus, the coverage of food crops by Scheduled castes was more compared to Scheduled tribes.

With regard to non-food crops, for the Scheduled castes former as against 2.29 lakh hectares in 2010-11, the estimated area for 2015-16 was 2.42 lakh hectares, showing an increase of 5.68 percent and in case of Scheduled tribes, the estimated area for 2015-16 was 2.09 lakh hectaresas against 2.10 lakh hectares in 2010-11, showing a decrease of 0.48 percent. (Tables 2.7(A) and 2.7(B))
2.41 In Table 2.8 the percentage area under principal crops by irrigation status is made available.

All other crops the percentage of area under un-irrigated was much higher than under irrigation except for Sugarcane, Spices, Fruits\& vegetables, Fodder and green Manure \& Floriculture crops. (Table 2.8)

Aromatic Plants reported the highest 93.42 percent under unirrigated, followed by plantation crops $92.61 \%$, pulses $92.47 \%$, Drug \& Narcotics 90.91\%. The remaining crops recorded less than 80\%. The percentage of an irrigated area next to sugar crops was floricultural crops ( $84.21 \%$ ), spices ( $73.43 \%$ ), fodder \& green manure ( $64.29 \%$ ), and Fruits \& vegetables ( $54.81 \%$ ) and the remaining crops recorded less than 30\%. (Table 2.8)
2.42 About 30.42 percent of the gross cropped area was irrigated during the current census compared to 31.20 percent during 2010-11, a decrease of nearly $2.50 \%$.

The percentage of net area sown under irrigated condition was 30.39 in 2015-16 compared to 29.48 in 2010-11 showing an increase of $3.09 \%$. Under un-irrigated conditions, it was 69.61 percent during $2015-16$ and $70.52 \%$ during 2010-11, showing a decrease of $1.29 \%$. (Table 2.8)
2.43 In case of Scheduled Castes \& Scheduled Tribes under irrigation, the gross cropped area was $25.56 \%$ and $32.92 \%$, the net area sown was $25.35 \%$ and $32.76 \%$, all food crops were $25.09 \%$ \& $36.54 \%$, undernon-food crops, the percentages were $27.27 \%$ and $23.92 \%$ respectively.

Among the major groups area under irrigation for Scheduled castes, after sugar crops and floriculture, spices stood second with $80.77 \%$, fruits \& vegetable third with $59.52 \%$ and for Scheduled tribes after sugar crops and floriculture, spices stood second with 86.36\%, fruits \& vegetables stood third with $64.52 \%$ area. (Tables 2.8(A) and 2.8(B)).
2.44 Table 2.9, profiles the distribution of the area under principal crops to the gross cropped area.

The conspicuous finding is that $77.20 \%$ of the gross cropped area or more than three-fourths were under food crops. The percentage of irrigated area under food crops was $81.52 \%$ which is higher compared to the unirrigated area of $75.32 \%$. In the case of nonfood crops, the percentage of the un-irrigated area i.e. $24.68 \%$ is higher when compared to the irrigated area of $18.48 \%$. Also, the percentage of net area sown to the gross cropped area had increased by 5.18 percent between 2010-11 and 2015-16 censuses. (Table 2.9)
2.45 Cereals accounted for the highest about $41.65 \%$ of gross cropped area, followed by pulses $21.15 \%$ and oilseeds $12.31 \%$. The shares of sugar crops, spices, fruits \& vegetables and fibers were below $7 \%$ each. The above analysis indicates a perceivable shift in cropping patterns from food crops to non-food crops. (Table 2.9)
2.46 In Tables $2.9(A)$ and $2.9(B)$ the percentage distribution of the area under principal crops for Scheduled castes and Scheduled tribes is furnished.

Cultivation of food crops by Scheduled castes accounts for 78.14\% and that of Scheduled tribes $71.33 \%$. The irrigated area under food crops to the total gross irrigated area was 76.68 percent for Scheduled castes and 79.17 for Scheduled tribes. Under non-food crops, in respect of Scheduled castes and Scheduled tribes when compared to the situation of 2010-11 census, the area irrigated has increased \& the area un-irrigated has decreased.
(Tables 2.9(A) and 2.9(B))
2.47 Among the major crop groups, the contribution of area under cereals was the maximum 43.45 percent, followed by area under pulses was $25.84 \%$, oilseeds was $12.20 \%$ for Schedule caste and in case of Scheduled tribes cereals were the maximum 47.46\%, followed by oilseeds had percentage of $17.42 \%$, pulses area was 14.68\%. In the case of the remaining crops viz., sugar crops, spices, fruits and vegetables, fibers and other non-food crops it was all below 10 percent in both the categories. (Tables 2.9(A) and 2.9(B))

## AREA UNDER CEREAL CROPS:

2.48 In Table 2.10, the area under cereal crops by irrigation status is furnished.

Out of the 6 principal cereal crops, maize occupied the first place with 13.99 lakh hectares out of the total area of 50.21 lakh hectares. Compared to 2010-11 area under this crop has increased by 1.32 lakh hectares. Paddy and Jowar come next with 13.24 and 8.97 lakh hectares respectively.

The irrigated area under Paddy was 8.64 lakh hectares and is the highest as balanced with other cereal crops and the 2010-11 census figure of 14.26 lakh hectares. Maize stood second with 3.26 lakh hectares of the irrigated area compared to 3.88 lakh hectares in the 2010-11census (15.98\% decrease), followed by jowar which was increased i.e., 0.78 lakh hectares to 1.01 lakh hectares of the irrigated area compared to the 2010-11 census. It is interesting to note that the irrigated area under Ragi has increased by 39.13percent. While Bajra \& Wheat came down by $33.33 \%$ \& $7.22 \%$ percent between the two censuses.
2.49 Table 2.10, depicts the area under individual cereals in terms of percentages to the total cereals. Maize was the leading crop with a $27.86 \%$ area in the total. Under irrigation, obviously, paddy occupies the first place with 58.14\%. Wheat as an individual crop was the least under the total as well as in unirrigated conditions.
2.50 In Table 2.11 the percentage of the area of individual cereal crops by irrigation status is furnished.

The irrigated area of all cereal crops together was 29.60 percent in the total area and compared to 2010-11 figures of $36.19 \%$, this was a decrease of about $18.21 \%$. The unirrigated area has increased correspondingly by 10.33\%. Paddy among the cereal crops has registered $65.26 \%$ of the area under irrigation, followed by Wheat $43.27 \%$, Maize $23.30 \%$. It was less than 12 percent each in the case of Jowar, Ragi \& Bajra. Ragi was the highest under unirrigated (92.51 percent), followed by Jowar (88.74 percent) and Bajra (88.63 percent).

## INTENSITY OF CROPPING BY SIZE GROUPS:

2.51 The overall distribution of both gross cropped area and net area sown are indicated in table 2.12.
2.52 The intensity of cropping pattern is the highest for the Small, Semimedium \& medium holdings with 1.08 each, very closely followed by marginal holdings 1.06 and large holdings are 1.05. (Table 2.12.)

2.53 Among Scheduled Cates holders, the crop intensity was 1.04 and for Scheduled tribe, it was 1.05 for all sizes of classes. On the other hand, the cropping-intensity for Scheduled caste varied from a low of 1.00 in case of large holdings to 1.05 in small holdings \& in the case of Scheduled Tribe holdings varied from a low of 1.00 in case of large holdings to 1.06 in respect of marginal \& Small category each. This proves that crop intensity among Scheduled Tribe is decreased by increasing in size of holdings. (Table 2.12(A) \& 2.12(B))

## Agricultural Census 2015-16

Intensity of cropping in different size groups holdings for Scheduled Castes in Karnataka

Agricultural Census 2015-16
Intensity of cropping in different size groups holdings for Scheduled Tribes in Karnataka

## Cropping Pattern of Cereals by Size of holdings:

2.54 The small, semi-medium and medium holdings together brought 75.81 percent of the area under food crops and 76.12 percent under non-food crops in the total. Among the major size groups, semi-medium holdings cultivated a higher proportion of area under pulses, oilseeds \& fibers. The large holdings accounted only for 5.94 percent and the marginal size class for 18.25 \% of the area under total food crops. Thus it is inferred that more than three-fourths of the area under food crops and non-food crops related to those of the small, semi- medium and medium-size classes. (Table 2.13)

As far as paddy is concerned the large holdings brought only about 5.71 percent of the area and the rest was distributed among the remaining four categories ranging from 18.42 percent in case of medium to 26.31 percent in case of small holdings. (Table 2.13)

One significant finding that surfaces are the large holdings had comparatively the lowest area in almost all major crops under cereals. Proceeding to the pulses one can notice that approximately 56 percent of the area together is reported by semi-medium and medium holdings, followed by 25.66 percent by small and then by 10.63 percent by Marginal holdings. In this respect, the large holders were at the bottom with only 7.33 percent of the total area under total pulses. An important finding that emerges from this exercise is that a major part of the area under all crops is contributed by the three middle-size classes namely, Small, Semi-medium and medium. Between them, they covered approximately 76 percent or more than three fourths, while the large holdings accounted less than one-tenth under all the crops together. (Table 2.13)

Proceeding to the social groups of schedule castes we find that the large holdings account only for about 2.63 percent of the total food crops and 7.64 percent of non-food crops. Together, the large Scheduled Caste holdings cover only 3.73 percent of all the crops. This means that it was the other four size classes which brought a considerable area under different crops both in food crops as well as in non-food crops. (Table 2.13(A))

Moving on to the Scheduled Tribes one can notice a slightly different situation. In their case, the marginal holdings also accounted for the considerable area under different crops ranging from 11.97 percent in the case of Tur to 20.68 percent in respect of paddy. Large holding however, reported only 2.41 percent under Gram, 4.38 percent under Jowar, 6.51 percent under Tur \& 8.77 percent under total non-food crops and 6.06 percent under all crops. However, in their regard, also bulk of the area under major crops was brought by the small, semi-medium and medium-size classes which enveloped approximately more than 75 percent area under all the crops together. (Table 2.13(B))

## Distribution of area under selected crops to gross cropped area

2.55The marginal holders had to bring as much 81.38 percent of their gross cropped area under food crops, particularly 54.87 percent under cereals and 13.52 percent under other food crops and 12.99 percent under pulses. They could devote only about 18.62 percent of their gross cropped area under Non-food crops, particularly 3.78percent of the area to fibers, 4.42 percent to other non-food crops \& 10.42 percent under oilseeds.

The small, semi-medium and medium holders also had to earmark approximately 76 percent their gross cropped area to food crops leaving the rest for non-food crops.

On the other hand, large holders reported only 67.38 percent of their gross cropped area under food crops \& 32.62 percent under non-food crops. Particularly about 8.54 percent for fibers, 11.98 percent for oilseeds \& 12.09 percent for other non-food crops. The purpose of this analysis is to show that the lesser the holding size class, the lesser is the scope for cultivating cash crops, oilseeds or non-food crops. (Table 2.14)

Moving on to schedule castes it is noticed that there is an insignificant difference in the cropping pattern from the overall for all social groups together. The Scheduled Caste marginal holders brought as much as 81.31 percent of their gross cropped area under food crops \& 18.69 percent under non-food crops. On the other hand, the large size holders could earmark 55.24 percent of their gross cropped area under food crops\& 44.76 percent under non-food crops. In this 19.36 percent under oilseeds, 25 percent under fibers and 0.41 percent under other non-food crops. (Table 2.14A)

As we proceed to the social groups of schedule tribes we do not notice any situation of considerable variation. In their case also the large holders could bring as much as 41.55 percent of their gross cropped area under non-food crops. The marginal holders have devoted only 23.28 percent of their gross cropped area under non-food crops. Similarly, the large holders could manage to bring 58.45 percent of their gross cropped area under food crops, whereas the marginal size class had to earmark as much as 76.72 percent. A very remarkable observation from the data is that just as the percent share of fibers gradually increases from marginal to large holders. The share of food crops gradually decreases from 76.72 percent in the case of marginal holders to 58.45 percent in the case of large holders. The objective of this angle of analysis is to
show that limited available land for cultivation confines the holders to food crops not leaving much for non-food or commercial crops. (Table 2.14(B))

## Distribution of Irrigated area under Cereals:

2.56 The Percentage of area irrigated for total cereals was about 29.60 a decrease of 6.59 percent compared to the 2010-11 Agricultural Census. Obviously, under cereals, paddy reported the highest percentage of 65.23 percent, maize 23.28 percent and other cereals 12.92 percent under irrigation. (Table 2.15)

Area irrigated for total cereals under major size classes, marginal holdings was the least ( 25.69 percent) and large holdings were the highest ( 38.39 percent) during 2015-16. All this goes to show that irrigation is yet to benefit the marginal farmers compared to large holders. (Table 2.15)

The Percentage of area irrigated for total cereals in the case of Scheduled castes \& Scheduled tribes was about $25.78 \%$ \& $35.70 \%$ respectively. Under cereals, paddy reported the highest percentage in both the categories about 73.74\% \& 80.17\% respectively. (Table 2.15(A) \& 2.15 (B)).

## Distribution of area under pulses by irrigation status:

2.57 In Table 2.16 the percentage distribution of the area under pulses by irrigation status for major size groups is furnished.
2.58 Bulk of the area, under total pulses, was cultivated by the small, semi-medium and medium farmers. It may be observed from the table that, the percentage of the total area semi-medium size holdings was the highest 30.25 percent, followed by medium-size holdings 26.13 percent, small holdings 25.66 percent, marginal holdings 10.63 percent and large holdings 7.33 percent. (Table 2.16 )

In the case of an irrigated area, the marginal size holdings had the lowest proportion of 8.99 percent. While with the increase in the size of the holdings, the percentage of area irrigated was also increasing except in medium \& large holdings. In the case of un-irrigated area, large size holdings registered the lowest percentage of 7.18 percent, while semi-medium holdings registered the highest proportion of 30.28 percent. (Table 2.16 )
2.59 In Tables $2.16(\mathrm{~A})$ and $2.16(\mathrm{~B})$, the percentage distribution of the area under pulses by major size groups for Scheduled castes and Scheduled tribes are furnished.

Moving to the social group of Scheduled Castes we can notice that the situation is not very different from the aggregate for all social groups. Large Scheduled Caste\& Scheduled Tribes holders reported the least percentage of 2.94 \& 4.79 respectively under total pulses. The distribution was identical both in respect of irrigated and unirrigated area under this crop in both the categories.
2.60 The proportion of area under small holdings showed the highest percentage of $33.89 \& 30.99$ respectively for Scheduled castes and Scheduled tribes. There is a decreasing trend observed from small holdings to large size holdings under both schedule caste and scheduled tribes category. (Tables 2.16(A) and 2.16(B))

Under irrigated area, semi-medium holdings had the maximum share of $32.32 \%$ \& $24.43 \%$ respectively for Scheduled castes and Scheduled tribes. While under the unirrigated area, small holdings had the maximum share of $34.02 \%$ \& $32.52 \%$ respectively for Scheduled castes and Scheduled tribes. (Tables 2.16(A) and 2.16(B))

## Distribution of Irrigated area under Sugarcane:

2.61 Sugarcane is an important commercial crop deserves specific mention in the overall analysis, as being grown normally under irrigated conditions. For every 100 hectares of sugarcane grown, the large holders have a share only of 5.38 percent, the marginal holders have 13.26 percent. The shares of these two size classes together form only about 18 percent of the area under this crop. Naturally, the remaining 3 size classes account for as much as 82 percent. The Semi-medium and medium farmers together brought more than half ( 54.87 percent) of the total area under irrigation. (Table 2.17)
2.62 Both in the case of Scheduled Castes and Scheduled Tribes, more or less the same pattern of distribution is noticed with the large holders reporting the lowest share. In the case of Scheduled Castes, small holdings accounted for the highest share of $36.40 \%$, followed by semi-medium with $29.43 \%$. In respect of Scheduled Tribes, semi-medium holdings accounted for the highest share of 30.91\%, followed by small holders with $29.70 \%$. (Table 2.17(A) \&2.17(B))

## Distribution of area under Cotton by irrigation status:

2.63 Cotton is another important commercial crop and as in the case of sugarcane, its cultivation is an indirect indication of a better source of income to the growers.

At the aggregate level for all the social groups, the least share was held by large holders by $9.35 \%$ and the highest semi-medium categories by $29.11 \%$, followed by medium holdings $25.88 \%$. This is combined for irrigated and unirrigated. If the irrigated area is accounted separately it could once again be observed that bulk is
covered by three size classes (small, semi-medium \& medium size classes) to the extent of about $74.86 \%$ leaving only $25.14 \%$ share by the marginal \& large holders. (Table 2.18)
2.64 Considering the data in respect of Scheduled Castes, we could find that large holders reported a share of about 13.70 percent only and the small holders to account for as much as around $29.34 \%$. Adverting to the Scheduled Tribes, once again there is a repeat pattern with the large Scheduled Tribe holders recording lowest share of the area by about 10.61 percent and the small holders account for as much as around 27.79 percent. (Table 2.18(A) \& 2.18(B))

## Distribution of area under Oilseeds by irrigation status:

2.65 The third and one of the most important commercial crops which promotes the economy of farmers is the Oilseeds. Hence, an analysis of the information available about this crop is most important. Not much difference can be seen in the distribution by size class between irrigated and unirrigated areas under Oilseeds. Overall, marginal farmers reported a share by about $14.67 \%$ in the total and the large category around 6.63\%. Nearly $4 / 5^{\text {ths }}$ of the Oilseeds area, both irrigated and unirrigated is carried away by the middle 3 size classes, i.e. small, semi-medium and medium size classes. Another interesting highlight is that semi-medium classes approximately account for $30 \%$ of the area. (Table 2.19)
2.66 While the status of the social groups together is as stated above, that in respect of Scheduled castes is slightly different. In their case, the least share was held by the large Scheduled Caste holders and this was as low as about 5.90\%. The marginal Schedule Caste
holders account for about $19.61 \%$ of the total area of Schedule Castes. Moving to the other social group Scheduled Tribes, the emergence of a different situation is noticed. Here, under irrigated conditions, large Scheduled Tribes holders recorded the lowest share of $5.72 \%$, followed by the marginal holders with $17.28 \%$. Correspondingly, under the un-irrigated situation, large holders had the lowest share of about $6.86 \%$, followed by marginal holders once at 13.03\%. (Table 2.19(A) and 2.19(B)).
2.67 The sum and substance of study of cropping pattern of commercial crops lead to the important finding that small, semi-medium and medium-size classes combined account for the largest share both under irrigated and unirigated conditions. (Table 2.19(A) and 2.19(B)).

## PERCENTAGE DISTRIBUTION OF IRRIGATED AREA TO THE TOTAL AREA UNDER PRINCIPAL CROPS IN MAJOR SIZE GROUP OF HOLDINGS:

2.68 The area under sugarcane was irrigated as per the 2015-16 census was 100 percent. The percentage of irrigated area for cereals was $29.60 \%$, followed by $28.43 \%$ for oilseeds, $22.23 \%$ for cotton, pulses a mere $7.54 \%$ under all social groups. Compared to the corresponding figures of the 2010-11 census, pulses, oilseeds \& cotton shows an increasing trend, the decrease was observed in cereals and sugarcane remains the constant.(Table 2.20)
2.69 Under cereals, large holdings had the highest percentage of irrigated area with $38.39 \%$, followed by medium $33.78 \%$, semi-medium $31.02 \%$, small $27.06 \%$ \& Marginal $25.69 \%$. In the case of pulses, it varied between 9.41 percent under large holdings to 6.38
percent under marginal holdings. In respect of oilseeds, it varied between 31.55 percent under marginal holdings to 25.67 percent under medium holdings and in the case of cotton, the lowest percentage of 17.90 was from small size holdings to the highest percentage of $38.75 \%$ under large size holdings. Under cotton, an increasing trend was observed when compared to the previous census 2010-11. (Table 2.20)
2.70 The maximum area under sugarcane was irrigated for both Scheduled castes and Scheduled tribes. The percentage of area irrigated under cereals \& pulses in the case of Scheduled tribes was $35.70 \%$ \& $12.62 \%$ respectively which was higher compared to $25.78 \%$ \& $5.95 \%$ percent for Scheduled castes. The percentage of area irrigated for Scheduled caste under oilseeds and cotton was $26.02 \%$ and $33.19 \%$ respectively which was higher compared to $22.84 \%$ \& $27.84 \%$ respectively for Scheduled tribes during 2015-16. (Table 2.20(A) \& 2.20(B)).
2.71 For both scheduled castes \& Scheduled tribes, the large size holdings registered the highest percentage of irrigated areas of $64.14 \%$ \& $59.68 \%$ respectively under cereals, $7.32 \%$ \& $51.69 \%$ under pulses and $89.93 \%$ \& $69.33 \%$ respectively under cotton. In the case of oilseeds, the lowest share of 21.15 percent was from semimedium size holdings and the highest was 71.37 percent under large size holdings for Scheduled castes. For Scheduled Tribes, the large ones registered the lowest share of 19.78 percent \& marginal holdings registered the highest share of 28.18 percent. (Table $2.20(A)$ and $2.20(B)$ )

## CHAPTER - III

## DISTRICT ANALYSIS OF OPERATIONAL HOLDINGS IN KARNATAKA

3.1 About 55 percent of the labour force in Karnataka is engaged in the agriculture sector, therefore, it may be useful to analyse the distribution of land holdings across the districts. An attempt has been made in this chapter to analyse important agricultural characteristics such as Operational Holdings, Ownership Status, Land Utilisation, Irrigation Status, Net Area Sown, Cropping Pattern and Intensity of Cropping across the districts. The extent of operational holdings by the Scheduled Caste and Scheduled Tribes across the districts have also been covered in the analysis.

## Geographical Area and Area under Operational Holdings:

3.2 The district wise proportion of area under operational holdings to the total geographical area of the district is given in Table 3.1.

The proportion of area under operational holdings to the total geographical area in the state which was 63.84 percent during 2010-11 has decreased to 61.97 percent during the 2015-16 Census registering a marginal decrease of 2.93 percent. There is a wide gap in the proportion of operational land holdings to the geographical area among 30 districts, in Vijapura district, it is as high as 88.79 percent, whereas, in Uttar Kannada district it is as low as 14.34 percent. The High proportion of area under landholdings is also seen in Yadgir (83.91\%), Gadag (83.69\%), Kalaburgi (83.36\%), Bidar ( $80.63 \%$ ), Dharwad ( $80.33 \%$ ). The districts which are either highly urbanized or with forest coverage have relatively low proportion of area under operational land holdings, these districts are Chikkamagalur (43.21\%), Kodagu (40.15\%), Bengaluru(Urban)
(38.25\%), Udupi (37.36\%), Dakshina Kannada (35.64\%), Chamarajanagar (35.61\%), Shivamogga (30.66\%).
3.3 Belagavi district with 10.10 lakh hectares has the distinction of possessing the highest area of operational holdings, whereas, Bengaluru (Urban) district with just 0.83 lakh hectares has the least area of operational holdings. More than $1 / 4$ th of the total land holdings are found just in four districts viz., Belagavi, Vijapura, Kalaburgi and Tumakuru. On the other hand, Uttara Kannada, Udupi, Bengaluru (Urban), Bengaluru (Rural), Dakshina Kannada, Kodagu\& Ramanagar districts relatively less area of operational holdings overall these districts accounting for less than 10 percent of the total area of operational holdings in the state. (Table 3.1)

## Operational Holdings in the Districts:

3.4 The district analysis on the distribution of operational holdings has already been presented in Part-I of Report on Census of Agricultural Holdings. However, to recapitulate, it was observed that Belagavi district with 6.20 lakhs has the highest number of land holdings and Kodagu district with 0.68 lakhs has the least number of land holdings. Further, it was observed that Belagavi has a large number of operational holdings with more than six lakh accounting for about $7 \%$ percent of total land holdings. On the other hand, Kodagu district has a small number with less than one lakh land holdings accounting for less than $1 \%$ percent of total land holdings. (Table 3.2)
3.5 The average size of land holding in Karnataka was 1.36 hectares, it varies from 0.57 to 2.58 hectares across districts. Vijapura district has the highest average size of 2.58 hectares, whereas, Mandya distric $\dagger$ has the lowest average size of 0.57 hectares. The districts which have more than two hectares of average size are Vijapura (2.58
ha), Kodagu ( 2.41 ha ), Gadag (2.18 ha), Kalaburgi (2.16 ha), Dharwad ( 2.12 ha ) \& Raichur ( 2.06 ha ). The districts which have less than one hectare of average size are Chamarajaanagar ( 0.94 ha ), Hassan ( 0.83 ha ), Chikkaballapur ( 0.83 ha ), Dakshina Kannada ( 0.81 ha ) Bengaluru (Urban) ( 0.78 ha ), Kolar ( 0.77 ha ), Bengaluru (Rural) ( 0.76 ha ), Mysuru ( 0.76 ha ), Uttara Kannada ( 0.74 ha ), Udupi ( 0.70 ha ), Ramanagar ( 0.68 ha ) \& Mandya ( 0.57 ha ). (Part-I, Table -18)

## Ownership Status:

3.6 The district-wise number and area of land holdings according to ownership status are given in Table 3.2 which shows that nearly entire the area is 'wholly-owned and self-operated' in all the districts. The 'otherwise operated' land holdings are negligible in the state. This is as per the information available in the records. (Table 3.2)
3.7In the case of land holdings operated by Scheduled Caste and Scheduled Tribes, the entire area is 'wholly-owned and selfoperated' in all the districts (Table 3.2A and 3.2B).

## Land Utilisation:

3.8 The percentage distribution of the area to the state total under mainland uses by districts is portrayed in Table 3.3. Two important indicators viz., net cultivated Area (net area sown and area under current fallow) and uncultivated area are considered for comparison among 30 districts.

Percentage of Uncultivated area is highest in Vijapura (13.08\%), followed by Udupi (11.99\%), Tumakuru (10.85\%), whereas, it is less than one percent in Kolar ( $0.97 \%$ ), Ramanagar ( $0.94 \%$ ), Haveri
(0.93\%), Raichur (0.63\%), Davanagere (0.62\%), Koppal (0.55\%), Bengaluru (Rural) (0.43\%), Ballari (0.37\%), Hassan (0.36\%), Mandya (0.32\%), Chamarajanagar (0.32\%), Chikkamagalur (0.28\%), Chikkaballapur (0.14\%), Mysuru (0.04\%) and least in Kodagu (Negligible). (Table 3.3)
3.9 The share of net area cultivated which is one of the indicators to measure irrigation intensity. Belagavi (8.54\%) tops the list followed by, Vijapura (7.86\%) and Kalaburgi (7.77\%), whereas, Bengaluru (Urban) district with just $0.67 \%$ is at the bottom. (Table 3.3)
3.10 In case of a share of uncultivated area for Scheduled Caste \& Scheduled Tribes, Vijapura district with 17.62 percent \& Chitradurga district with $40.36 \%$ respectively stands the first place. The share of net area cultivated was highest in Kalaburgi (11.85\%) for Scheduled Caste and in the case of Scheduled Tribes, it was in Raichur district (16.70\%). (Table 3.3(A) and 3.3(B))

## District-wise distribution of mainland uses to the total operated area:

3.11 In the previous paragraphs from 3.8 to 3.10 the district-wise percentage of net area cultivated and uncultivated area to the state total has been compared. The proportion of these two indicators to the total operated area within the respective district shows a different result, it can be seen from Table 3.4 that the net area cultivated across the districts in the state varies from 88.09 percent to cent percent. This proportion was above the state average of 98.88 percent in 20 districts, below in 9 districts and it remains the same in one district. (Table 3.4)
3.12 The complementary, i.e. proportion of uncultivated area in the state was 1.12 percent which has reduced by 46.41 percent compared previous Census 2010-11, The proportion of uncultivated area was highest in Udupi district (11.91\%), followed by Dakshina Kannada (7.25\%). (Table 3.4)
3.13 In Tables 3.4(A) and 3.4(B) the district-wise percentage of area under mainland use to the total operated area for Scheduled Caste and Scheduled Tribes are furnished. The percentage of net area cultivated in the state for Scheduled Caste and Scheduled Tribes was at 99.31 percent and 99.28 percent respectively. Land un-cultivated was higher for Scheduled tribes i.e., 0.72 percent, while it was 0.69 percent for Scheduled caste.
3.14 The net cultivated area, within their operated extent was higher than the state average of 99.31 percent in respect of 19 districts with regard to Scheduled Castes and 21 districts for Scheduled Tribes compared to 99.28 percent of state average.(Tables 3.4(A) and 3.4(B))

## Irrigation Status:

3.15 The wholly irrigated holdings in the state have increased from 19.82 lakhs in 2010-11 to 20.95 lakhs in 2015-16 registering an increase of 5.70 percent. It is heartening to note that the increase has occurred in 14 districts out of 30 districts, Kodagu district has the distinction of registering the highest percentage of increase (234 percent) from 1204 wholly irrigated holdings during 2010-11 to 4,022 during 2015-16, followed by Mandya (70\%). Belagavi district with 2.45 lakhs has the highest number of wholly irrigated holdings during 2015-16. The percentage increase of partly irrigated holdings was highest in Raichur with 341 percent, followed by Dharwad with 144 percent
and in the majority of districts the percentage of partly irrigated holdings has increased compared to the previous census. Under wholly un-irigated category, most of the districts have shown an increasing trend in 2015-16 compared to 2010-11 census (Table 3.5).
3.16 Out of the total number of wholly irrigated holdings in the State, Belagavi District has the highest share of 11.67 percent, followed by Mandya 11.56 percent, Raichur 7.21 percent, Bagalkote 6.57 percent and the lowest was in Bidar district with just 0.18 percent. In the case of partly irrigated holdings, Udupi district has the highest 9.32 percent, followed by Tumakuru 8.69 percent and the lowest was in Kodagu district 0.03 percent. The number of holdings that were cultivated without irrigation, Hassan district accounted for the highest percentage of 7.72 percent, followed by Kalaburgi with 7.34 percent and the least was in Dakshina Kannada with 0.61 percent. (Table 3.5)
3.17 In Tables 3.5(A) and 3.5(B), the district-wise percentage distribution of the number of holdings by irrigation status for Scheduled Caste and Scheduled Tribes are given. Raichur district accounted for the highest share of $13.67 \& 25.14$ percent of the total number of wholly irrigated holdings in the case of Scheduled Caste and Scheduled Tribes respectively. With regard to partly irrigated holdings, Vijapura district stood first with 8.83 percent for schedule caste and Chitradurga district accounted for 11.28 percent for schedule tribe category. With regard to the distribution of wholly unirrigated holdings, Kalaburgi district recorded the highest share of 11.10 percent for Scheduled Caste and Chitradurga district with $10.62 \%$ in case of Scheduled Tribes.
3.18 About 25.46 percent or one-fourth of total holdings were wholly irrigated in the state and another 10.27 percent were partly irrigated, whereas, 64.27 percent were completely unirrigated. The proportion of wholly irrigated holdings was above the state average in 11 districts and of these, Dakshina Kannada accounted highest for 57.45 percent of the holdings, followed by Bagalkote with 55.96 percent. The lowest proportion of 1.53 percent was in Bidar district. In the case of partly irrigated holdings, 16 districts were above state average i.e., the highest observed in Udupi 44.43 percent, followed by Dakshina Kannada 27.01 percent, Uttar Kannada 19.69 percent. Kodagu recorded for the lowest proportion of 0.37 percent. As regards the number of holdings under the wholly unirrigated category, 17 districts were found to be above the state average. Among these Kodagu accounted for the highest proportion of 93.71 percent, followed by Kalaburgi 92.99 percent and Bidar 87.38 percent, Chikkaballapur district 87.02 percent. It was lowest i.e. 15.54 percent in Dakshina Kannada district. (Table 3.6)
3.19 In Tables $3.6(\mathrm{~A})$ and $3.6(\mathrm{~B})$, the percentage distribution of holdings district wise according to irrigation status for Scheduled Castes and Scheduled Tribes are furnished. At the macro level in the State, the proportion of wholly irrigated holdings was 26.62 percent among Scheduled Tribes higher as compared to the proportion of 20.84 percent for Scheduled Castes. The proportion of partly irrigated holdings was also higher in their case of Scheduled Tribes with 8.55 percent as compared to 6.49 percent for Scheduled Castes, but the proportion of wholly unirrigated holdings was higher in case of Scheduled caste with 72.68 percent as compared to 64.83 percent for Scheduled tribes.
3.20 The proportion of wholly irrigated holdings was above the state average in 14 districts among Scheduled Caste. They are Raichur (54.35\%), Bagalkote (53.63\%), Dakshina Kannada (53.62\%), Shivamogga (43.09\%), Mandya (41.90\%), Uttara Kannada (37.02\%), Belagavi (35.99\%), Ballari (32.31\%), Davanagere (27\%), Koppal (25.46\%), Udupi (23.72\%), Chamarajanagar (23.69\%), Yadgir (22.53\%) \& Vijapura (21.64\%). \& In the case of Scheduled Tribes, 11 districts were found to be above the state average. They are Dakshina Kannada (56.05\%), Raichur (54.92\%), Mandya (53.28\%), Shivamogga (51.99\%), Ballari (44.96\%), Bagalkote (44.10\%), Uttara Kannada (37.81\%), Yadgir (36.29\%), Koppal (34.73\%), Udupi (30.24\%) \& Davanagere (29.14\%) \& In respect of partly irrigated holdings the proportion was more than the state average in 16 districts for both Scheduled Caste and Scheduled Tribes. The proportion of completely unirrigated holdings was found to be above the state average of 72.68 percent in 17 districts for Scheduled Castes and 18 districts for Scheduled Tribes against the state the average of 64.83 percent. (Tables 3.6(A) and 3.6(B))

## Net Area sown According to Irrigation Status:

3.21 The net area sown was the highest in Belagavi (9.40 lakh hectares), followed by Vijapura (9.08 lakhs hectares), Kalaburgi (8.99 lakh hectares), Raichur ( 6.11 lakh hectare), Tumakuru (5.30 lakh hectares) and the lowest being Bengaluru (Urban) district ( 0.54 lakh hectares). The wholly irigated area was found to be the highest in Belagavi district with 3.76 lakh hectares and lowest in Bidar district ( 0.06 lakh hectares). The overall net irrigated area was found to be the highest in Belagavi district (4.63 lakh hectares), followed by Raichur (3.11lakh hectares), Bagalkote ( 2.58 lakh hectares), Vijapura (2.37 lakh hectares), Ballari (2.35 lakh hectares) and lowest being Bengaluru Urban district ( 0.10 lakh hectares). (Table3.7)

The net area sown was highest in Kalaburgi district (1.29 lakh hectares), followed by Vijapura district ( 0.92 lakhs hectares) for Scheduled castes. In the case of Scheduled tribes, it was highest in Raichur district (1.19 lakh hectares), followed by Chitradurga district (0.81 lakhs hectares). The overall net irrigated area was found to be the highest in Raichur district with 0.59 lakh hectares \& 0.66 lakh hectares respectively for Scheduled castes and Scheduled tribes. The lowest is in Kodagu district for both Scheduled castes and Scheduled tribes.(Table $3.7(\mathrm{~A}) \& 3.7(B)$ )
3.22 Belagavi stood first accounting for 14.77 percent of the area as wholly irrigated in the state, followed by Raichur with 11.82, Bagalkote with 9.30 percent and the lowest was in Bidar district with 0.22 percent. With regard to the distribution of net area sown under the partly irrigated category, Belagavi once again was in top position (10.01\%). Pertaining to the share of net irrigated also Belagavi occupied the first place (13.56\%), followed by Raichur (9.10\%). About the status of wholly unirrigated conditions, Kalaburgi district occupied the first place with 12.19 percent, followed by Vijapura (8.06\%), Belagavi (5.39\%) and Uttara Kannada, Udupi, Bengaluru (Urban) \& Dakshina Kannada are at the bottom with less than 1\%. (Table 3.8)
3.23 It is a matter of gratification that the backward Raichur district occupied the first place in the state for both Scheduled Caste and Scheduled Tribes registering $27.05 \%$ and $34.62 \%$ respectively in the proportion of wholly irrigated category. As regards partly irrigated category, the percentage of the net area sown was the highest in Vijapura district (11.70\%) for Scheduled Caste and in Chitradurga district (12.45\%) for Scheduled Tribes. The share of the net irrigated
area was the maximum in Raichur district for Scheduled Caste and Scheduled Tribes with $22.13 \%$ \& $29.31 \%$ respectively. In case of distribution under the wholly unirrigated category, Kalaburgi occupied the first place (16.81\%) for Scheduled Caste and Chitradurga (14.52\%) for Scheduled Tribes. (Table 3.8(A) and 3.8(B))
3.24 The percentage of wholly irigated area to the net area sown in the state has decreased to 22.69 percent in the 2015-16 census compared to 22.96 percent in the 2010-11 census. The percentage of the partly irrigated area has increased to 17.61 in the 2015-16 census compared to $14.17 \%$ in the 2010-11 census. The percentage of wholly unirrigated area to the net area sown has declined by 3.18 percent, it was 62.87 percent in the 2010-11 census, whereas, it is 59.69 percent in the 2015-16 census. (Table 3.9)
3.25 Bagalkote district with 51.40 percent reported the highest proportion of wholly irrigated area to the net area sown. In19 districts it was below the state average. The lowest share of 1.36 percent was in Bidar district. The percentage of partly irrigated areas to the net area sown was the highest in Udupi district (32.47\%). It was above the state average in 17 districts. The proportion of net area irrigated to net area sown was the maximum once again in Dakshina Kannada ( 74.30 percent) and minimum in Kalaburgi district ( 5.66 percent). It was exceeded the state average of $30.39 \%$ in 11 districts. The percentage of wholly unirrigated area to net area sown was the highest in Kalaburgi (90.92\%) and the least in Dakshina Kannada ( 9.98 percent). It surpassed the state average of $59.69 \%$ in 17 districts. (Table 3.9)
3.26 The shares of wholly irrigated as well as the partly irrigated areas to the net area sown were higher for Scheduled Tribes than Scheduled Caste at the state level, while that of the wholly unirrigated was the other way, higher for Scheduled Caste than Scheduled Tribes. Compared to the state average share of 20.51 percent of wholly irrigated to net area sown for Scheduled Caste, 10 districts were above the state average with Raichur (60.47\%) on top of the list. In the case of Scheduled Tribes, 11 districts were above the state average share of 26.49 percent with Dakshina Kannada (55.39\%) at the top (Table 3.9(A) and 3.9(B)).
3.27 The proportion of net irrigated area at the state level for Scheduled Castes was $25.39 \%$. Dakshina Kannada reported the highest proportion of 73.87 percent followed by, Raichur (61.26\%), Bagalkote (48.92\%), Shivamogga ( $46.78 \%$ ), Mandya ( $45.69 \%$ ) and in 17 districts it was below the state average. In case of Scheduled Tribes, the proportion was 32.72 percent at the state level, Dakshina Kannada district on top with the highest percentage (79.32\%), followed by Shivamogga (61.52\%), Raichur (55.75\%), Uttara Kannada (53.04\%) and in 18 districts it was below the state average. (Table 3.9 (A) \& 3.9 (B)).
3.28 The proportion of wholly unirrigated area to net area sown for Scheduled Caste at the state level was 68.34 percent, which is higher than for Scheduled Tribes at 58.66 percent. As many as 17 districts for Scheduled Caste and 16 districts for Scheduled tribes exceeded the state average. For both Scheduled Caste and Scheduled Tribes category Kalaburgi district stood first with94.36\% \& $87.81 \%$ respectively under the wholly unirrigated area. (Table 3.9(A) and $3.9(\mathrm{~B})$ )

## Gross cropped Area:

3.29 The percentage of Gross cropped area to the State total was highest in Belagavi district with $9.42 \%$ followed by, Vijapura district with $7.71 \%$, Kalaburgi district with $7.50 \%$ and lowest in Bengaluru (Urban) district with $0.45 \%$. Belagavi district stood first with $14.33 \%$ \& Bengaluru (Urban) district was least with $0.28 \%$ under Gross irrigated area and Kalaburgi district was highest with $10.17 \%$ \& Dakshina kannada district was least with $0.48 \%$ under Gross un-irrigated area. (Table 3.10)

Under Scheduled caste, the percentage of Gross cropped area to the State total was highest in Kalaburgi district with $11.73 \%$ followed by Raichur district with $9.04 \%$ and lowest in Udupi district with $0.18 \%$. Under Scheduled tribes, Raichur district stood first with $16.73 \%$ \& Bengaluru (Urban) district was least with $0.06 \%$. (Table 3.10(A) \& 3.10(B)).

## Cropped Area Irrigated:

3.30 The proportion of irrigated area to gross cropped area at the state level was 30.42 percent during the 2015-16 census which has marginally decreased by 0.78 percent compared to the 2010-11 census figure of 31.20 percent. Among the districts, Dakshina Kannada accounted for the highest proportion of 74.23 percent, followed by Shivamogga (56.35\%), Bagalkote (51.77\%), Raichur (50.16\%), Mandya (50.15\%), Ballari (46.73\%), Belagavi (46.26\%), Udupi (44.11\%), Davanagere (41.63\%), Yadgir (37.31\%) \& Tumakuru (36.67\%). It was below 30 but above 15 percent in 15 districts viz., Vijapura, Koppala, Gadag, Uttara Kannada, Haveri, Chitradurga, Chikkamagular, Kolar, Bengaluru (Urban), Bengaluru (Rural), Hassan, Mysuru, Chamarajanagar, Ramanagar \& Chikkaballapur
and it was below 15 percent in the remaining 4 districts, the lowest being in Kalaburgi district (5.63\%). (Table 3.11)
3.31 The percentage of irrigated area to the gross cropped area was 32.95 percent for Scheduled Tribes, which is higher than that of Scheduled Castes which has registered 25.56 percent. Among the districts, Dakshina Kannada accounted for the highest share of $79.29 \%$ \& $73.75 \%$ percent for Scheduled Tribes and Scheduled Caste respectively. As many as 13 districts in the case of Scheduled Caste and 11 districts for Scheduled Tribes had a higher share than the state averages. (Table $3.11(A)$ and $3.11(B)$ ).

## The Intensity of Cropping by Major size Class of Holdings:

3.32The intensity of cropping i.e. the ratio of net area sown to the gross cropped area is shown in Table 3.13. Gadag district has the distinction of scoring maximum ratios in respect of all size classes except large size class. It can be seen that the intensity of cropping is relatively low in the districts where the dependence of agricultural operations to a considerable extent still on the rainfall, for example, Kalaburgi, Ballari, Chitradurga, Tumakuru, Kolar, Bengaluru (Urban), Bengaluru (Rural), Mandya, Dakshina Kannada, Chamarajanagar, Chikkaballapur have relatively fewer ratios. (Table 3.13)

## Cropping pattern

3.33 A large number of crops are grown in Karnataka and the cropping pattern differs widely across the districts depending upon agro-climatic conditions prevailing in the state. An attempt has been in this section to highlight the wide variations observed in the cropping pattern across districts. The analysis of agricultural census
data shows that Kalaburgi district alone accounts for nearly half (43.40\%) of the area under Tur crop in the State. The next district is Vijapura with a share of 23.80 percent which is far away from the share of Kalaburgi district. (Table 3.14)

Interestingly just six districts of Bagalkote, Vijapura, Kalaburgi, Bidar, Gadag and Yadgir together account for about 74 percent of the area under pulses in the State, whereas, remaining 24 districts account for another 26 percent. (Table 3.14)

On the other hand, the area under cereals is distributed consistently in most of the districts. The districts with more than 5 percent share in the area under cereals are Belagavi (10.04\%), Davanagere (6.50\%), Ballari (6.24\%), Raichur (6.05\%), Koppal (5.87\%), Hassan (5.57\%) \& Vijapura (5.27\%. (Table 3.14)

The coverage of area under Jowar is predominant in the districts of Vijapura (17.68\%), Belagavi (16.34\%), Bagalkote (10.08\%), Raichur (6.71\%), Gadag (6.70\%), which together account for about 58 percent of the area under this crop in the State. (Table 3.14)

The 10 districts of Belagavi, Raichur, Koppal, Uttara Kannada, Ballari, Davanagere, Shivamogga,Mandya, Mysuru \& Yadgir together account for 78 percent of the area under paddy. (Table 3.14)
3.34 The percentage of area under selected crops to the gross cropped area by the district is given in Table 3.15. A comparison of the percentage of area under food crops and non-food crops shows that in 11 districts the area under food crops is more than 80 percent, these districts are Belagavi (80.84\%), Bagalkote (85.65\%), Vijapura (93.31\%), Kalaburgi (89.93\%), Koppal (87.58\%), Uttara Kannada (92.43\%), Davanagere (92.45\%), Shivamogga (94.96\%), Mandya (88.27\%), Ramanagar (81.44\%), Chikkaballapur (87.94\%).

On the other hand, in Kodagu (74.66\%), Chitradurga (39.90\%), Bengaluru (Urban) (39.08\%) and Tumakuru districts (38.02\%) the percentage of area under non-food crops is widespread. (Table 3.15)

## The Irrigated area under important crops:

3.35 The entire area covered under sugarcane crop is irrigated, whereas, the coverage of area under irrigation for cereals is only 29.60 percent, oil seeds 28.43 percent, cotton 22.23 percent and pulses only 7.54 percent. Across districts, the percentage of area covered under irrigation for these major crops varies significantly. There is a high percentage of area covered under irrigation for cereals in the districts Yadgir (70.69\%), Raichur (63.31\%), Ballari (50.86\%), Mandya (46.20\%), Shivamogga (44.61\%), Bagalkote (42.35\%). whereas, in Kolar \& Bengaluru (Urban) the coverage is less than 5 percent. Shivamogga district with 59.15 percent has the highest percentage of the area under irrigation for pulses, whereas, Kodagu has the least i.e. Nil. Coverage of oilseeds under irrigation is predominant in Dakshina Kannada (94.72\%), Uttar Kannada (90.86\%), Bengaluru (Urban) (81.88\%), Udupi (75.82\%), Bengaluru (Rural) (63.87\%), Raichur (63.41\%) and Shivamogga districts (62.74\%). Under Cotton, Kolar \& Bengaluru (Rural) districts accounted the highest i.e. cent percent of the area covered under irrigation. (Table 3.16)
