REPORT ON POOLING OF CENTRAL AND STATE SAMPLE DATA NSS 68TH ROUND

HOUSEHOLD CONSUMER EXPENDITURE (TYPE 1 & 2) & EMPLOYMENT & UNEMPLOYMENT

DIRECTORATE OF ECONOMICS AND STATISTICS
BANGALORE.

REPORT ON

HOUSEHOLD CONSUMER EXPENDITURE (TYPE 1 & 2)

&

EMPLOYMENT & UNEMPLOYMENT

IN KARNATAKA

NSS 68TH ROUND

2011-12

CENTRAL AND STATE SAMPLE POOLED DATA

DIRECTORATE OF ECONOMICS AND STATISTICS

GOVERNMENT OF KARNATAKA

BANGALORE.

PREFACE

The 68th round (July 2011-June 2012) of NSS was earmarked for survey on 'Household Consumer Expenditure' and 'Employment and Unemployment'. The survey on 'household consumer expenditure' and 'employment and unemployment' is the ninth quinquennial survey in the series, the last one being conducted in the 66th round (2009-2010) of NSS. Karnataka State is a partner in these surveys since the 18th round(1963), on equal matching basis.

National Statistical Commission constituted a professional committee under the Chairmanship of Prof. R.Radhakrishna, to identify the preconditions for pooling of Central and State Sample NSS data, to suggest appropriate methodology for pooling the data and to bridge the data gaps and in turn strengthen the database for decentralized planning and governance.

Accordingly the NSC professional committee has suggested certain poolability tests and the methodologies for pooling of Central and State sample data.

DES, Karnataka State has undertaken the exercise of pooling of Central and State sample data from 66th round and the 68th round being the third in the series. This report is prepared by a team of officers in the CNL Division dealing with NSS work.

The work done by the supervisors and field staff who worked tirelessly to make the survey a success, the devoted services of the report writers and all other who may have contributed in diverse ways to the success of the survey and subsequent production of the report are duly acknowledged. I also thank National Sample Survey Office for their support in all levels of survey and also in supplying the unit level data of central samples for pooling of central and state sample data.

I hope this report will be useful to the planners, policy makers, academicians and researchers. Comments and Value Suggestions from the Researchers and Scholars on this report are most welcome.

Bangalore *Dr.C.H.VASUNDHARA DEVI*
Date: 31.3.2018 *DIRECTOR*

ANNEXURE-1 Sample size for 68th round of each district in the state

APPENDIX-A Sample Design and Estimation Procedure of NSS 68th Round

Executive Summary

- *This report is based on the Household Consumer Expenditure and Employment & Unemployment Survey conducted in the 68th round of National sample Survey during July 2011- June 2012.*
- *A stratified multi-stage design has been used in 68th round survey. The first stage units(FSU) were the census villages in the rural sector and urban frame survey (UFS) blocks in urban sector. The ultimate stage units (USU) were households in both the sectors.*
- *The survey in Karnataka was conducted in 256 villages and in 256 urban frame survey blocks by the Directorate of Economics and Statistics* ***(State Samples).*** *The same number of samples* ***(Central Samples)*** *were surveyed by Field Operation Division of National Sample Survey Office(NSSO).*
- *Information was collected from about 24,574 households in Karnataka by both the agencies of which 12,288 households by DES and 12,286 by NSSO.*
- *In this report an attempt has been made to obtain district level estimates for rural and urban sector of Karnataka by pooling Central and State sample data.*

Household Consumer Expenditure:

- *Three different methods of measurement of* ***Monthly Per Capita Consumer Expenditure (MPCE)*** *at household level namely URP, MRP and MMRP were used in 68th round of survey based on the reference period of data collection.*

LEVEL OF CONSUMPTION

- *Using the URP(Uniform reference period) method, average Monthly Per Capita Consumer Expenditure(MPCE) was estimated as Rs.1322.44 in rural Karnataka and Rs.2709.20 in Urban Karnataka.*
- *Using the MRP(Mixed reference period) method, average Monthly Per Capita Consumer Expenditure(MPCE) was estimated as Rs.1356.54 in rural Karnataka and Rs.2701.49 in Urban Karnataka.*
- *Using the MMRP(Modified Mixed reference period) method, average Monthly Per Capita Consumer Expenditure(MPCE) was estimated as Rs.1497.96 in rural Karnataka and Rs.2793.28 in Urban Karnataka.*
- *The State average MPCE based of MMRP method was higher than URP and MRP methods both in rural and urban areas.*
- *Among the Districts, Bangalore Rural (Rs.2628.23) had the highest rural Monthly Per Capita Consumer Expenditure (Modified Mixed Reference Period)- MPCE(MMRP)*

followed by Bangalore Urban (Rs.2560.83), Dakshina Kannada (Rs.2557.82), Kodagu (Rs.2374.85) and Udupi (Rs.2153.53). In all other districts, average rural MPCE(MMRP) was between Rs.1098 and Rs.1830.

- *Average rural MPCE(MMRP) was lowest in Gulbarga(Rs.1097.53), followed by Chitradurga(Rs.1153.42) and Koppal(Rs.1191.45) districts.*
- *Bangalore Urban (Rs.4141.75), Dakshina Kannada (Rs.3845.78) and Udupi (Rs.3237.38) were three districts with highest Monthly Per Capita Consumer Expenditure (Modified Mixed Reference Period) i.e. above Rs.3000 in urban sector.*
- *In Urban Karnataka Monthly Per Capita Consumer Expenditure (Modified Mixed Reference Period) was lowest in Gadag (Rs.1374.44) preceded by Gulbarga(Rs.1405.95) and Bagalkote(Rs.1429.34) districts.*

PATTERN OF CONSUMPTION

- *Food accounted for 52.66% share of expenditure for MPCE(MMRP) in rural Karnataka during 2011-12. This included 9.8% for cereals and cereal substitutes, 8.6% for beverages & refreshments etc., 6% for Egg, fish & meat, 5.6% each for vegetables and Sugar, salt & spices.*
- *For the urban Karnataka, 40.94% of the value of household consumption was accounted for by food, including 9.3% by beverages & refreshments etc, 6.5% by cereals and cereal substitutes and 4.7% by Milk and Milk Products.*
- *In rural areas of Ramanagara and Mysore districts, the share of expenditure for MPCE(MMRP) on food items were 63.05% and 61.09% respectively. In all other Districts, share of food items was between 39% to 59%.*
- *In the urban Karnataka the share of food in consumption expenditure varied from 36% in Bangalore Urban and 38% in Dakshina Kannada districts to 55% in Gadag.*
- *The share of most of the food item groups in total consumption expenditure was higher in rural Karnataka than in urban Karnataka.*
- *Average cereal consumption per person per month(MPCE-MMRP) was 9.03 Kg in rural Karnataka and 8.29 Kg in urban Karnataka.*
- *The share of non-food in consumption expenditure was higher in urban Karnataka than in rural Karnataka. The same picture depicted in most of the districts.*

EMPLOYEMENT & UNEMPLOYMENT

LABOUR FORCE PARTICIPATION RATE(LFPR)

- ***Labour Force:*** *Refers to the population which supplies or seeks to supply labour for production of goods and services and therefore, includes both the employed and unemployed.*
- ***Labour Force Participation Rate(LFPR):*** *Labour Force Participation Rate is defined as the number of persons/person-days in the labour force per 1000 persons/person-days. The labour force indicators have been obtained based on three approaches viz usual status(ps) approach, current weekly status(CWS) approach and current daily status(CDS) approach.*
- *About 46% of rural and 39% of urban population in Karnataka belonged to labour force.*
- *Rural LFPR is higher than Urban at State level and in almost all districts in all the three approaches.*
- *Kolar district had the highest LFPR(PS+SS) with 536 and lowest in Shimoga with 338 (persons per 1000) in Rural areas.*
- *Mandya district had highest LFPR(PS+SS) with 496 and lowest in Gulbarga with 290 (persons per 1000) in Urban areas.*
- *The LFPR(CWS) was estimated at 45% and 39% in rural and urban areas respectively.*
- *Under current weekly approach, LFPR(persons per 1000) varied from 338(shimoga district) to 533(Kolar district) in rural areas, and from 290(Gulbarga district) to 479(Mandya distrct) in urban areas.*
- *The LFPR(CDS) was estimated at 44% and 38% in rural and urban areas respectively.*
- *Kolar district had the highest LFPR(CDS) with 523 and lowest in Shimoga with 333 (persons per 1000) in Rural areas.*
- *Mandya district had highest LFPR(CDS) with 467 and lowest in Gulbarga with 290 (persons per 1000) in Urban areas.*
- *About 62% of the rural males, 29% of the rural females, 59% of the urban males and 18% of the urban females were in labour force in usual status(PS+SS)*

WORKER POPULATION RATIO(WPR)

- ***Worker population ratio(WPR):*** *WPR is defined as the number of persons/person-days employed per 1000 persons/person-days.*
- *Worker population ratio(WPR) in usual status(PS+SS) was about 45% in rural areas and 38% in urban areas. The WPR in usual status(PS+SS) was 62% for rural males, 29% for rural females, 58% for urban males and 17% for urban females.*
- *WPR in current weekly status(CWS) was about 45% in rural areas and 38% in urban areas.*
- *WPR in current daily status(CDS) was about 43% in rural areas and 37% in urban areas.*

Unemployment Rate(UR)

- ***Unemployment Rate(UR):****UR is defined as the number of persons/person-days unemployed per 1000 persons/person-days in labour force(which includes both employed and unemployed)*
- *The unemployment rate(UR) in usual status(PS+SS) was about 1% in rural Karnataka and about 2% in urban Karnataka. It was about 1% for both males and females in rural areas, 1.4% for urban males and 2.6% for urban females.*
- *The unemployment rate(UR) in Current weekly status(CWS) was about 1% in rural Karnataka and 2% in urban Karnataka*
- *The unemployment rate(UR) in Current daily status(CDS) was about 3% in rural as well as in urban Karnataka*

CHAPTER-1

Introduction and Background

1.1 Background

The National Sample Survey Office (NSSO) conducts nationwide household consumer expenditure survey at regular intervals as part of its "rounds", each round normally of a year's duration. The NSS surveys are conducted through interviews of a random sample of households selected through a scientific design, and cover practically the entire geographical area of the country.

The household consumer expenditure survey (CES) is generally covered as one of the main subjects of the NSS survey at quinquennial intervals. This provides a series of CES's. The 68th round survey (July 2011 - June 2012) was the ninth such survey of this quinquennial series, the eighth having been conducted during the 66th round (July 2009-June 2010).

1.2 State's participation in NSS surveys

Karnataka state has been participating in the NSS surveys from 18thround onwards using the same concepts, definitions, procedures and adopting the same sample design, as that of NSSO, based on independently drawn sample called as the state sample. The size of the state sample in Karnataka is equal to that of central sample.

One of the objectives of states participation in the NSS programme is to provide a mechanism by which sample size will be increased and the pooling of the two sets of data would enable better estimates at lower sub state level, particularly at district level. At the State level, this will result in increased precision of the estimates and at disaggregated level, estimates will be more stable. But the major benefit will be derived in the case of estimates generated at sub-state level like NSS regions/districts.

1.3 Emerging need for pooling of Central and State samples

The 73rd and 74th constitutional amendment (1992) has brought into existence the democratically elected grassroots institutions of local self governance, both in rural and urban areas, with respective delegated functions. This has enhanced the demand for local level statistics and necessitated requirement of developing basic capabilities at grass root levels to organize such statistics in a harmonious

manner. In this context, it is envisioned that the survey resources in overall NSS programme both by Central and State Agencies can be more effectively utilized to generate lower level estimates of key indicators at district level. 13th Finance Commission, in Para 12.99 of its report, noted that "Comparable estimates of district income are extremely relevant for measuring intra-state income disparities. This will enable State Governments to effectively plan policy and programme interventions. They could also be used as a parameter for horizontal distribution of fiscal transfers". The Commission also recommended for granting finance to State Governments, which should be utilized by the State for strengthening statistical infrastructure at the district level. These requirements are subsequently brought in institutional framework in the implementation of the 13th Finance Commission.

1.4 National Statistical Commission's (NSC) Recommendation

The National Statistical Commission in its reports has observed the importance of pooling in the statement:

> ***"The statistical agencies of different State Governments have been participating in the NSS programme and canvassing the same questionnaires in matched samples of households in their respective States following identical concepts, definitions and procedures. Results from the central samples and state sample(s) have occasionally been compared. The main purpose of the programme is to pool the two samples and obtain dependable estimates for regions within the States."***

1.5 Constitution of committee on pooling

National Statistical Commission (NSC) constituted the committee on pooling of central and state samples in National Sample Surveys (NSS) under the chairmanship of Prof. R. Radhakrishna vide order no. 8(64)/2010-NSC, 30th July, 2010. The terms of reference of the committee are as follows:-

- ☐ ***Conditions to be fulfilled for pooling of Central and State Sample NSS data***
- ☐ ***Methodology for pooling***
- ☐ ***Time frame by which the exercise needs to be completed by each State***
- ☐ ***Generating weighting diagrams from the pooled data at sub-state level for the purpose of consumer price indices (Rural and Urban) including occupation specific indices such as CPIAL, CPIIW etc., from the NSS data on consumer expenditure surveys (quinquennial & thin sample)***

1.5.1 Recommendations of the committee on Pooling

The committee Constituted by NSC on pooling has made recommendations regarding

a) ***Indicators to be pooled at sub-state level***
b) ***Scope of poolability and measures to improve the poolability of Central and State data***
c) ***Methodology for pooling***
d) ***Preparation of weighting diagram for construction of CPI at sub-State level.***

1.6 Assistance of NSSO (DPD) for processing of NSS State Sample Data

Since NSSO develops its own in-house software for processing the central sample data, in the deliberations of COCSSO held in the recent past, it was recommended that NSSO should assist the States in terms of providing common Data Entry Software, Tabulation Software, Instructions Manual and Training and Hands on Practice to DES personnel. NSSO has already started providing this assistance to States. Karnataka is using the Data Entry Software, Validation Software, Tabulation Software supplied by the NSSO (DPD) for data entry, validation and processing of data.

The harmonization of data processing process is one of the key essences for pooling the different sets of data. The state sample data should be processed using the same set of validation rules as in the case of central sample data. Accordingly, it is essential that the State sample data is processed, ensuring the use of same data entry layout as in the case of Central sample. If the States are evolving their own data layout, as per their convenience, then the state data should be put in the layout, harmonized with that of the Central data for using the same software developed for central samples. Since Karnataka is using the software supplied by the NSSO (DPD), the question of harmonization of data processing process does not arise.

CHAPTER-2

Conceptual Framework of 68th Round

2.1 Overview

The 68th round (July 2011-June 2012) of NSS was earmarked for survey on "Household Consumer Expenditure" and "Employment and Unemployment". The last survey on these subjects was conducted in 66th round of NSS(2009-10) which was the eighth quinquennial survey in the series on "Household Consumer Expenditure" and "Employment and Unemployment".

2.2 Objective of the Survey

2.2.1 Consumer Expenditure Survey (CES):

Monthly Per Capita Expenditure (MPCE) as an indicator of level of living is both simple and Universally applicable. Average MPCE of any sub-population of the State (any region or population group) is a single number that summarises the level of living of that population. It is supplemented by the distribution of MPCE, which highlights the differences in level of living of the different parts of the population. Detailed analysis of the distribution of MPCE reveals the proportion and absolute numbers of the poor with respect to a given poverty line. The data is collected not only on consumption level but also on consumption pattern. Another important use of CES is to work out consumer price indices(CPIs) which measures the general rise in consumer prices. One needs to know not only the price rise for each commodity group but also the budget shares of different commodity groups(used as weights). The budget shares as revealed by the NSS Consumer Expenditure Survey are being used to prepare what is called the weighting diagram for official compilation of CPIs.

2.2.2 Employment and Unemployment

The basic objective of the employment and unemployment survey of NSSO is to get estimates of employment and unemployment characteristics at National and State level. The Statistical indicators on labour market are required for planning, policy and decision making at various levels, both within government and outside. Some of the important uses of these indicators include a) by the Planning Commission in evolving employment strategy, b) by National Accounts Division in estimating gross domestic product using sector wise work fore participation, and c) by various researchers to analyse the condition of the labour market. Using the data collected from employment and unemployment surveys, indicators will be generated on labour force participation rate, worker population ratio, unemployment rates, employment in informal sector, informal employment, wages of employees etc.

2.3 Participation of State:

Karnataka State is participating in this survey on equal matching basis by adopting the same methodology of NSSO. The sample size of the State sample in Karnataka is equal to that of Central samples. The sample list of the state sample is drawn and supplied by the NSSO. District wise sample size of 68th round is given in Annexure-1.

2.4 Period of Survey

The period of survey was of one year duration starting on 1st July 2011 and ending on 30th June 2012. The survey period of this round was divided into four sub-rounds of three months duration.

2.5 Schedule of enquiry

The following Schedules of enquiry were canvassed;

Schedule 0.0 : List of Households

Schedule 1.0 : Consumer Expenditure

Schedule 10 :Employment and Unemployment

2.6 Sample Design

The features of sample design and estimation procedure are explained in Appendix-A

2.7 Concepts and Definitions

2.7.1 House: Every structure, tent, shelter etc. is a house irrespective of its use. It may be used for residential or non-residential or both purpose or even may be vacant.

2.7.2 Household: A group of persons normally living together and taking food from a common kitchen will constitute a household. It will include temporary stay away (those whose total period of absence from household is expected to be less than 6 months) but exclude temporary visitors and guests (expected total period of stay less than 6 months)

2.7.3 Household size: The size of a household is the total number of persons in the household.

2.7.4 Household type: he Household type is based on the sources of the household's income during the 365 days preceding the date of survey. For this purpose, only the household's income (net income not gross income) from economic activities is to be considered; but the income of servants and paying guests are not to be taken into account.

In **rural** areas, a household will belong to any one of the following six household types:

Self-employed in agriculture
Self-employed in non-agriculture
Regular wage/salary earning
Casual labour in agriculture
Casual labour in non-agriculture
Others

In **urban** areas, the household type are:

Self-employed
Regular wage/salary earning
Casual labour
Others

2.7.5 Household consumer expenditure:

Household consumer expenditure is measured as the expenditure incurred by a household on domestic account during a specified period, called reference period. It also includes the imputed values of goods and services, which are not purchased but procured otherwise for consumption. In other words, it is the sum total of monetary values of all items(i.e., goods and services) consumed by the household on domestic account during the reference period.

2.7.6 Value of consumption: For items of food, pan, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item, and the following rules of valuation are specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex-factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.7.7 Uniform Reference Period MPCE (or $MPCE_{URP}$): This is the measure of MPCE obtained by the NSS consumer expenditure survey (CES) when household consumer expenditure on each item is recorded for a reference period of "last 30 days" (preceding the date of survey).

2.7.8 Mixed Reference Period MPCE (or $MPCE_{MRP}$): This is the measure of MPCE obtained by the CES when household consumer expenditure on items of clothing and bedding, footwear, education, institutional medical care and durable goods is recorded for a reference period of "last 365 days", and expenditure on all other items is recorded with a reference period of "last 30 days".

2.7.9 Modified Mixed Reference Period MPCE (or $MPCE_{MMRP}$): This is the measure of MPCE obtained by the CES when household consumer expenditure on edible oil, egg, fish & meat, vegetables, fruits, spices, beverages, refreshments, processed food, pan, tobacco and intoxicants is recorded for a reference period of "last 7 days", expenditure on items of clothing & bedding, footwear, education, institutional medical care and durable goods is recorded for a reference

period of "last 365 days", and expenditure on all other items is recorded with a reference period of "last 30 days".

2.7.10 Economic Activity: Any activity that results in production of goods and services that adds value to national product is considered as an economic activity. The economic activities have two parts – market activities and non-market activities. Market activities are those that involve remuneration to those who perform it, i.e., activity performed for pay or profit. Such activities include production of all goods and services for market including those of government services, etc. Non market activities are those involving the production of primary commodities for own consumption and own account production of fixed assets.

2.7.11 Activity status: It is the activity situation relating to participation in economic or non-economic activities in which a person is found engaged during a reference period. Determination of activity status is the first and foremost step in the employment-unemployment surveys. Each person of the selected households is assigned a unique activity status for which further detailed information is collected.

2.7.12 Usual principal Activity status: The activity status on which a person spent relatively longer time (Major time criterion) during the 365 days preceding the date of survey is considered the usual principal activity status(PS) of the person.

2.7.13 Subsidiary Activity status: A person whose usual principal status is determined on the basis of major time criterion may have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person.

2.7.14 Current weekly activity status (CWS): Current weekly activity status(CWS) of a person is the activity status obtaining for a person during a reference period of 7 days preceding the date of survey. It is decided on the basis of certain priority cum major time criterion.

2.7.15 Current daily activity status(CDS): Current daily activity status(CDS) for a person is determined on the basis of his/her activity status on each day of the reference week using a priority cum major time criterion(day to day labour time disposition).

2.7.16 Labour Force participation rate: Labour force, or in other words, the 'economically active' population, refers to the population which supplies or seeks to supply labour for production and therefore, includes both 'employed' and 'unemployed' persons. The labour force participation rate (LFPR) is defined as the number of persons/person-days in the labour force per 1000 persons/person-days.

2.7.17 Workforce participation ratio (WPR): WPR is defined as the number of persons/person-days employed per 1000 persons/person-days.

CHAPTER-3

Testing poolability and Methodology for pooling

3.1 Introduction

Though the central sample and state sample are drawn independently following identical sampling design with same concepts, definitions and instructions to collect the state sample data unit level data in some cases are not properly validated. There is also expected agency bias in the two sets of data generated by different agencies. As such they cannot be merged for generating pooled estimate without testing that the samples are realized from identical distribution function. Since the parametric distribution of the sample mean is unknown one may adopt non-parametric tests such as Run test, Median test, chi-square test etc to test the samples that are coming from identical distribution function.

3.2 Testing poolability of central and state sample

3.2.1 Median test

In statistics, the median test is a special case of Pearson's Chi-square test. It tests the null hypothesis that the medians of the populations from which two samples are drawn, are identical. Observations in each sample are assigned in to two groups, one consisting of data whose values are higher than the median value in the two groups combined, and the other consisting of data whose values are at the median or below. A Pearson's Chi-square test is used to determine whether the observed frequencies in each group differ from expected frequencies derived from a distribution combining the two groups.

Let m^* be the median of the pooled sample data. Construct 2 X 2 contingency table as below and use chi-square test if State sample and Central sample have identical median.

Sample-type	no of sample observation		Total
	<= m^*	> m^*	
State Sample	N_{11}	N_{12}	$N_{1.}$
Central Sample	N_{21}	N_{22}	$N_{2.}$
Total	$N_{.1}$	$N_{.2}$	$N_{..}$

Observed frequency of each cell
$O_{ij}= N_{ij}$ where i= 1 to 2, j= 1 to 2.
Expected frequency of each cell
$E_{ij}=(N_{i.} * N_{.j})/N_{..}$ where i= 1 to 2, j= 1 to 2.

χ^2 **Value=** $\sum_{i=1}^{2}\sum_{j=1}^{2}(O_{ij}-E_{ij})^2/O_{ij}$

with degrees of freedom = (2-1)*(2-1) = 1

The statistical power of this test may sometimes be improved by using a value other than the median to define the groups say quintile classes– that is, by using a value which divides the groups into more nearly equal groups than the median would.

3.2.2 Multinomial distribution test or χ^2 test

For discrete data such as status of activity, educational level and categorical variable such as land possed etc, standard tests of equality of sample proportions of two sets of data based on multinomial distributions, relevant chi-square tests may be used after grouping the attributes/categorical variables in to a suitable number of classes so that each class contains adequate number of sample observations. Construct 2 X k contingency table for k classes at the domain where two sets of data are to be pooled as below and use chi-square test if State sample and Central sample have identical distribution.

Sample-type	no of sample observation				Total
	Class-1	Class-2	Class-k-1	Class-k	
State Sample	N_{11}	N_{12}	N_{1k-1}	N_{1k}	$N_{1.}$
Central Sample	N_{21}	N_{22}	N_{2k-1}	N_{2k}	$N_{2.}$
Total	$N_{.1}$	$N_{.2}$	$N_{.k-1}$	$N_{.k}$	$N_{..}$

Observed frequency of each cell $O_{ij}= N_{ij}$ where i= 1 to 2, j= 1 to k.

Expected frequency of each cell $E_{ij}= (N_{i.} * N_{.j})/N_{..}$ where i= 1 to 2, j= 1 to k.

χ^2 **Value** = $\sum_{i=1}^{2}\sum_{j=1}^{2}(O_{ij}-E_{ij})^2/O_{ij}$

with degrees of freedom = (2-1)*(k-1) = k-1

3.2.3 Wald-Wolfowitz run test

Suppose X and Y are independent random samples with cumulative distribution function (CDF) as $F_s(x)$ and $F_c(y)$. Null Hypothesis to be tested is H_0: $F_s(x) = F_c(x)$ for all x against alternative Hypothesis is H_1: $F_s(x) <= F_c(x)$ for all x and $F_s(x) < F_c(x)$ for some x. Let $x_1,x_2,\ldots,x_m$ be iid observation from state sample with distributive function F_s and $y_1,y_2,\ldots,y_n$ be iid observation from central sample with distributive function F_c. Pool the data and order them with respect to comparable characteristic under consideration say monthly per capita expenditure (MPCE). In the pooled order sequence put "1" for X and "0" for Y. Let U be the total runs observed where 'run' is a sequence of adjacent equal symbols. For example, following sequence: 11110001110011111110000 is divided in six runs, three of them are made out of "1" and the others are made out of "0". The number of runs U is a random variable whose distribution for large sample can be treated as normal with:

mean: $\frac{2mn}{m+n}+1$

variance: $\frac{2mn(2mn-m-n)}{(m+n)^2(m+n-1)}$

After normalizing the variable U one may use one sided z-test for testing the Null hypothesis. In extreme case the value of U will be 2 meaning by observed characteristic of all the observation of one sample is less than the other samples.

One of the limitations of this test is when there is a tie between two samples in the observed value. One has to resolve ties in usual manner. However if there is large number of ties which is bound to occur specially for qualitative attributes like education level, activity status etc, this test is not recommended. This test can be well applied for a continuous variable such as MPCE which are less prone to ties. For discrete variable chi-square test is recommended.

3.2.4 Parametric test

Aggregate estimate: Let t_{yc} and t_{ys} be the estimate of Y at domain level of pooling based on central and state sample respectively with corresponding variances $V(t_{yc})$ and $V(t_{ys})$. For large sample, making all assumption of parametric test, one may use Z-Statistic to test the null hypothesis H_0 $E(t_{yc}) = E(t_{ys})$ where E stands for expectation.

$$\mathbf{Z=}\ \frac{(t_{yc}-t_{ys})}{\sqrt{(V(t_{yc})+V(t_{ys}))}}$$

$V(t_{yc})$ and $V(t_{ys})$ could be estimated as

$\hat{V}(t_{yc}) = \sum_{l} (t_{yc1}-t_{yc2})^2/4$,

$\hat{V}(t_{ys}) = \sum_{l} (t_{ys1}-t_{ys2})^2/4$ based on sub-sample 1 & 2 estimates where $\sum_{l}$ stands for

summing over stratum x sub-stratum level variance at the domain of pooling.

Estimate of rate: Let r_c and r_s be the estimate of population rates R_c and R_s ie Y/X based on central and state sample respectively with corresponding mean square error MSE(r_c) and MSE (r_s). For large sample, making all assumption of parametric test, one may use Z-Statistic to test the null hypothesis H_0 $E(r_c)=E(r_s)$ where E stands for expectation.

$$\mathbf{Z}= \frac{(r_c - r_s)}{\sqrt{(MSE(r_c) + MSE(r_s))}}$$

MSE(r_c) and MSE(r_s) are estimated as follows:

$mse(r_c) = (\hat{V}(t_{yc}) - 2 * r_c \hat{Cov}(t_{yc}, t_{xc}) + r_c^2 * \hat{V}(t_{xc}))/ t_{xc}^2$

$mse(r_s) = (\hat{V}(t_{ys}) - 2 * r_s \hat{Cov}(t_{ys}, t_{xs}) + r_s^2 * \hat{V}(t_{xs}))/ t_{xs}^2$

where

$$\hat{V}(t_{yc}) = \sum_l (t_{yc1} - t_{yc2})^2 / 4,$$

$$\hat{V}(t_{ys}) = \sum_l (t_{ys1} - t_{ys2})^2 / 4$$

$$\hat{V}(t_{xc}) = \sum_l (t_{xc1} - t_{xc2})^2 / 4,$$

$$\hat{V}(t_{xs}) = \sum_l (t_{xs1} - t_{xs2})^2 / 4$$

$$\hat{Cov}(t_{yc}, t_{xc}) = \sum_l (t_{yc1} - t_{yc2})(t_{xc1} - t_{xc2}) / 4$$

based on sub-sample 1 & 2 estimates.

where $\sum_l$ stands for summing over stratum x sub-stratum level variance, covariance at the domain of pooling.

3.3 Methodology for pooling

Pooling by inverse weight of the variance of the estimates

3.3.1 Aggregate estimate: For any characteristic, consider the state sample [s] in the form of two independent sub- sample s1 and s2 and the central sample [c] in the form of two independent sub- sample c1 and c2. Based on this, the respective estimates for state and central can be computed as:

$t_s = \sum_l (t_{s1} + t_{s2})/2$ and $t_c = \sum_l (t_{c1} + t_{c2})/2$

Pooled estimate leading to optimum combination of these two estimates is given by weighing with inverse of the variance of the estimate. Thus the pooled estimate is given by:

$$T_p = \frac{V(t_c)t_s + V(t_s)t_c}{V(t_c) + V(t_s)}$$

With $V(T_p) = \frac{V(t_c)V(t_s)}{V(t_c) + V(t_s)}$

In general $V(t_c)$ and $V(t_s)$ are unknown and can be estimated as

$$\hat{V}(t_c) = \sum_l (t_{c1} - t_{c2})^2 / 4,$$

$$\hat{V}(t_s) = \sum_l (t_{s1} - t_{s2})^2 / 4$$

where $\sum_l$ stands for summing over stratum x sub-stratum level variance at the domain of pooling.

Thus pooled estimate and estimate of pooled variance is given by

$$t_p = \frac{\hat{V}(t_c)t_s + \hat{V}(t_s)t_c}{\hat{V}(t_c) + \hat{V}(t_s)},$$

$$\hat{V}(t_p) = \frac{\hat{V}(t_c)\hat{V}(t_s)}{\hat{V}(t_c) + \hat{V}(t_s)}$$

3.3.2 By virtue of weighing the two estimates at the domain level at which two estimates are pooled, the pooled estimate will always lie between the central and state sample estimates.

3.3.3 Estimate of rate: Let r_c and r_s be the estimate of R_c and R_s ie Y/X based on central and state sample respectively with corresponding estimated mean square error mse(r_c) and mse(r_s). The pooled estimate and estimate of variance of pooled ratio estimate may be given by:

$$r_p = \frac{mse(r_c)r_s + mse(r_s)r_c}{mse(r_c) + mse(r_s)},$$

$$mse(r_p) = \frac{mse(r_c)\,mse(r_s)}{mse(r_c) + mse(r_s)}$$

Where mse(r_c) and mse(r_s) are calculated using formula given in para 1.5.2 above. Alternatively one can generate the pooled estimate of aggregate by inverse weight of estimate of variance obtained from central and state sample using formula given in para 2.1.1 for the characteristics x as well as y and obtain the pooled estimate of ratio as ratio of pooled estimate of aggregate. This will ensure consistency between pooled estimates of aggregate and the pooled estimate of ratio.

Let t_{xp} and t_{yp} be the pooled estimate of aggregate for the parameter X and Y. The pooled estimate of R (i.e Y/X) is given by

$r_p = t_{yp}/t_{xp}$

where $t_{yp} = at_{yc} + bt_{ys}$ and $t_{xp} = ct_{xc} + dt_{xs}$ and (a, b), (c, d) are the estimated inverse variance weight pair of the characteristic x and y respectively.

The estimated mse of pooled ratio estimate r_p is given by:

mse(r_p) = ($\hat{V}(t_{yp}) - 2\, r_p\, \hat{Cov}(t_{yp}, t_{xp}) + r_p^2\, \hat{V}(t_{xp})$)/ t_{xp}^2

where $\hat{V}(t_{yp}) = \frac{ab}{a+b}$, $\hat{V}(t_{xp}) = \frac{cd}{c+d}$

and

$\hat{Cov}(t_{yp}, t_{xp}) = ac\,\hat{Cov}(t_{yc}, t_{xc}) + bd\,\hat{Cov}(t_{ys}, t_{xs})$.

$$\hat{Cov}(t_{yc}, t_{xc}) = \sum_l (t_{yc1} - t_{yc2})(t_{xc1} - t_{xc2})/4$$

based on sub-sample 1 & 2 estimates.
Similarly,

$$\hat{Cov}(t_{ys}, t_{xs}) = \sum_l (t_{ys1} - t_{ys2})(t_{xs1} - t_{xs2})/4$$

where $\sum_l$ stands for summing over stratum x sub-stratum level covariance at the domain of pooling.

Method laid down in para 2.1.1 and 2.1.2 requires calculation of estimate of variance of the estimates before pooling them. Reliability of estimate of variance should be ascertained with due consideration of sample size. Besides the complex calculations of variances and covariances for each cell of the table, one needs to address the issue of non-additivity of the component estimates with the estimate of marginal total. For e.g. pooled estimate of MPCE of FOOD and NON-FOOD may not add up to MPCE of TOTAL. To obviate this problem one may generate the pooled estimates of components first and then derive the estimate of total as sum of estimates of components.

3.3.4 Pooling by simple average of the estimates

Many of the States are not fully equipped with complex calculation of estimate of variance especially when cells of the table contains ratio of two characteristics which is usually presented in the NSS reports. When the State's participation is equal matching of central samples, the simple average of two estimates may be a way of combining the estimates considering central and state samples as independent samples. The pooled estimate will always lie between the estimates based on central and state sample separately.

When the State's participation is of unequal matching of central samples, the weighted average of two estimates with weights being matching ratio of central and state sample may be a better way of combining the estimates considering central and state samples as independent samples. For any characteristic, consider the state sample [s] in the form of two independent sub-sample s1 and s2 and the central sample[c] in the form of two independent sub- sample c1 and c2. Let matching ratio of state and central sample be m : n. Based on this, the respective estimates for state and central can be computed as:

$t_s = \sum_l (t_{s1} + t_{s2})/2$ and $t_c = \sum_l (t_{c1} + t_{c2})/2$

Pooled estimate of these two estimates is given by weighing with matching participation rate m:n. Thus the pooled estimate is given by:

$t_p = \frac{mt_s + nt_c}{m+n}$ with $V(t_p) = \frac{m^2 V(t_s) + n^2 V(t_c)}{(m+n)^2}$

In general $V(t_c)$ and $V(t_s)$ can be estimated as

$\hat{V}(t_c) = \sum_l (t_{c1} - t_{c2})^2 / 4$,

$\hat{V}(t_s) = \sum_l (t_{s1} - t_{s2})^2 / 4$ and thus

$\hat{V}(t_p) = \frac{m^2 \hat{V}(t_s) + n^2 \hat{V}(t_c)}{(m+n)^2}$

The pooled estimate will always lie between the estimates based on central and state sample separately.

3.4 Conclusion: For those characteristics which are known to be distributed as Normal, poolability of the two sets of central and state data may be tested by standard parametric tests such as Z-test. For those characteristics for which transformation makes them Normal, such methodology may be adopted. In most of the situations where the distribution is non-normal and unknown, the two sets of data may be tested through various non-parametric tests such as those laid down in para 1 of above. For discrete data, Standard tests of equality of proportions based on binomial distribution may be used and for multinomial distributions relevant chi-square tests may be used.

CHAPTER-4
Household Consumer Expenditure

4.1 Introduction

The main objective of Household Consumer Expenditure is to know the level of living and disparities, consumption pattern, inter temporal changes in the consumption and nutrition intake, among the states and districts. The main aim of this survey is to generate estimates of average household Monthly Per capita Expenditure(MPCE), which is an effective tool to study the prevalence of Poverty and Inequality.

4.2 Sample Size of Karnataka:

Totally the sample size in rural areas is 512, of which 256 pertains to NSSO and 256 to DES. Similarly, in urban areas of the 512 samples, 256 pertains to NSSO and the other 256 to DES. The district wise and agency wise sample size is given in Annexure-1.

4.2.1: Number of Villages/blocks, households and persons surveyed for Schedule 1.0 Type 1 and Type 2.

Schedule	Central Sample			State Sample		
	FSU Surveyed	Households Surveyed	Persons Surveyed	FSU Surveyed	Households Surveyed	Persons Surveyed
1.0 Type -1	256	2048	9591	256	2048	9684
1.0 Type -2	256	2048	9804	256	2048	9820

URBAN

Schedule	Central Sample			State Sample		
	FSU Surveyed	Households Surveyed	Persons Surveyed	FSU Surveyed	Households Surveyed	Persons Surveyed
1.0 Type -1	256	2046	8679	256	2048	9043
1.0 Type -2	256	2048	8641	256	2048	8797

4.3 Parameters Considered for Pooling

The following broad parameters were considered for pooling of Central and State sample data keeping in view the limitation of sample size at district level and nature of Indicators.

1. Household size, sex, age.
2. MPCE of Food, Non-Food and total MPCE derived from detail item for URP,MRP and MMRP.
3. District level quintile class computation

4.4 Testing Poolabilty of Central and State sample

Though the central sample and state sample are drawn independently following identical sample design with same concepts, definitions and instructions to collect the state sample data, different non-sampling errors may occur due to different reasons like lack of adequate training to field staff and data processing staff, agency bias etc. As such they cannot be merged for generating pooled estimates without testing that the sample are realised from identical distribution function.

Run test (one sided Non-parametric Wald-Wolfowitz) and Mean test (Parametric Z-test) was done over MPCE (URP, MRP, MMRP) for testing the poolability of central and state sample data for urban and rural. Number of districts for which poolability was rejected by both the above mentioned tests are given below.

The district wise results of run test and mean test are given in **Tables 0.1(R)/(U) and 0.3(R)/(U)** respectively in Chapter 6.

4.4.1:Run Test: We can glance through the statement-4.4.2, run test at 1% critical error the null hypothesis is rejected in the

rural area of Bidar and Bellary districts and accepted in all urban areas for $MPCE_{URP.}$ In the case of $MPCE_{MRP}$ the test rejected only in rural area Bellary. Run test of $MPCE_{MMRP}$ rejected in the rural areas of Gulbarga, Haveri, Bellary, Chikmagalur, Dakshina Kannada and Chikballapur districts and urban areas of Shimoga, Tumkur, Bangalore Urban and Dakshina Kannada districts.

4.4.2: Number of districts for which Poolability was rejected over MPCE by run test using Z-Statistics (one sided) and Mean test.

Type (MPCE)	Sector		
	Rural	Urban	Total Districts
Run test			
URP	2	0	29
MRP	1	0	29
MMRP	6	4	29
Mean test			
URP	2	1	29
MRP	2	1	29
MMRP	0	2	29

4.4.3:Mean Test: In the mean test at 0.5% critical error the null hypothesis is rejected in rural areas of Bellary and Kodagu and Urban areas of Bellary district for $MPCE_{URP.}$ In the case of $MPCE_{MRP}$ the mean test rejected in rural areas of Uttara Kannada & Kodagu, urban areas of Dakshina kannada. $MPCE_{MMRP}$ rejected only in urban areas of Bangalore Rural and Mysore districts.

4.5 Methodology of Pooling

Two alternate methods are used in pooling the central and state sample data.

a) **Weighting by Matching ratio:** Building aggregate estimate of pooled sample in proportion matching ratio m:n of central and state sample aggregate estimate where m and n are the allotted sample for central and state sample separately for rural and urban sector. Building ratio estimate of pooled sample as ratio of aggregate estimates.

b) **Weighting by inverse of variance:** Ratio estimates are built by weighting the ratio estimate of central and state sample in proportion to inverse of variance of ratio of the central and state sample.

4.6 Following Tables were generated pertaining to the estimation of different parameters and their RSEs;

a) District wise estimated number of households and their RSEs for Central, State and pooled samples (Matching ratio) for rural and urban sectors for schedule type-1 and schedule type-2

b) District wise estimated number of persons and their RSEs for Central, State and pooled samples (Matching ratio) for rural and urban sectors for schedule type-1 and schedule type-2

c) District wise estimated sex ratio and their RSEs for Central, State and pooled samples (Matching ratio) for rural and urban sectors for schedule type-1 and schedule type-2

d) District wise and quintiles class wise estimate of MPCE (URP, MRP, MMRP) for food, non-food and total of rural and urban sectors for Central, State and pooled samples (Matching ratio & Inverse variance methods).

e) District wise RSE of estimate of MPCE (URP, MRP, MMRP) for food, non-food and total for Central, State and pooled samples (Matching ratio & Inverse variance methods) for rural and urban sectors.
(These tables are presented in Chapter-7)

4.7 Uniform Reference Period MPCE ($MPCE_{URP}$)

Uniform Reference Period MPCE ($MPCE_{URP}$) is measured, based on household Consumer Expenditure on each item of schedule Type 1 for the reference period of *'last 30 days' (preceding the date of survey).*

4.7.1: District wise Rural and Urban $MPCE_{URP}$ in Karnataka (68^{th}round-2011-12-Pooled-Maching-ratio)

(in Rs)

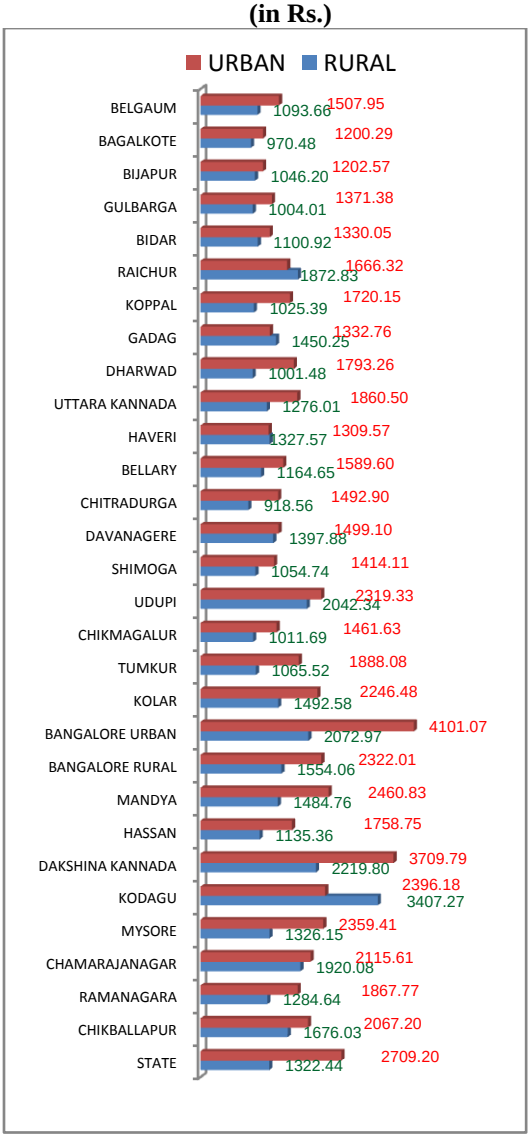
CHIKBALLAPUR	**1676.03**	**2067.20**
STATE	**1322.44**	**2709.20**

The State Average $MPCE_{URP}$ was Rs.1322.44 for rural and Rs.2709.20 for urban areas.

Average rural $MPCE_{URP}$ was lowest in Chitradurga (**Rs.918.56)** and Bagalkote **(Rs.970.48)** districts i.e below Rs.1000 and Kodagu district record the highest MPCE i.e Rs. **3407.27,** Out of 29 districts 15 districts have the $MPCE_{URP}$ below State average.

Average urban$MPCE_{URP}$ was lowest in Bagalkote and Bijapur districts **(around Rs.1200).** Bangalore Urban record the highest $MPCE_{URP}$**(Rs.4101.07),** followed by Dakshina kannada District(Rs. **3709.79**) and only these two districts have the MPCE above state average.

Graph-1: Monthly Percapita Expenditure (URP) (in Rs.)



4.8 Mixed Reference Period MPCE ($MPCE_{MRP}$)

The $MPCE_{MRP}$ is measured based on household Consumer Expenditure on items of clothing and bedding, footwear,

education, institutional medical care and durable goods recorded in schedule Type 1 for the reference period of '*last 365 days'* and expenditure on all other items is recorded with a reference period of '*last 30days'*.

4.8.1: District wise Rural and Urban $MPCE_{MRP}$ in Karnataka (68th round-2011-12-Pooled-Maching-ratio) (in Rs.)

DISTRICT	RURAL	URBAN
BELGAUM	1257.24	1625.65

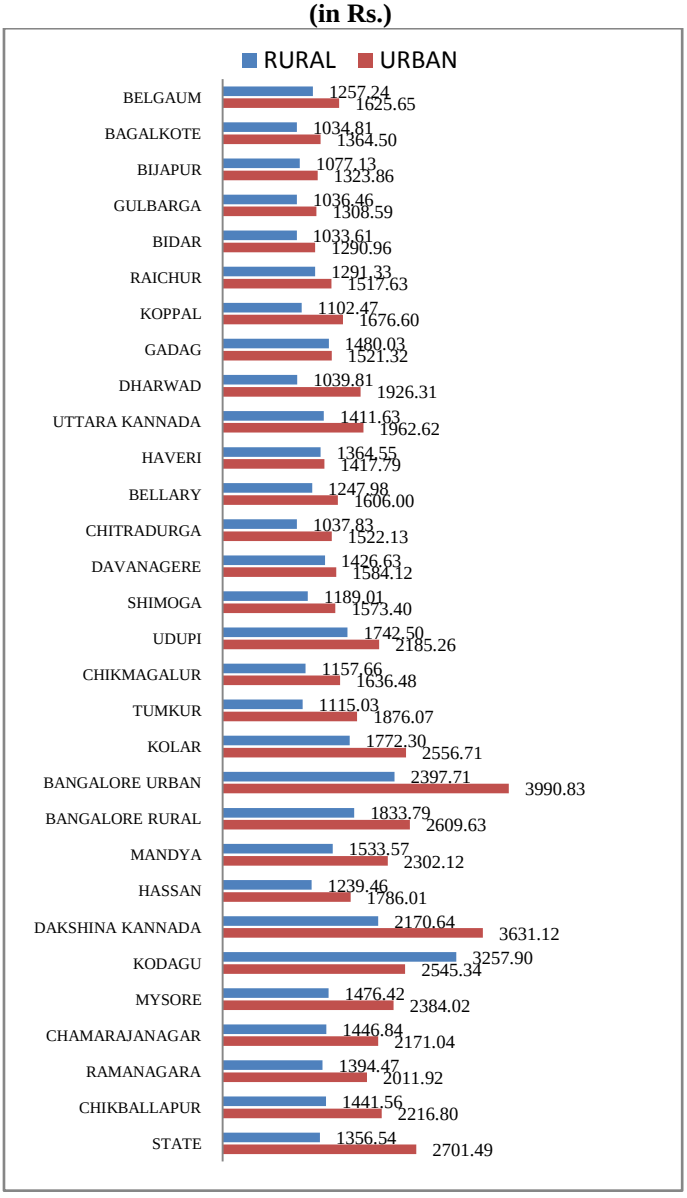
CHIKBALLAPUR	1441.56	2216.80
STATE	**1356.54**	**2701.49**

The average $MPCE_{MRP}$ of the Karnataka State was Rs.1356.54 for rural and Rs 2701.49 for Urban.

In rural Karnataka $MPCE_{MRP}$ was highest in Kodagu district (Rs. **3257.90),** almost 2 ½ times more than the state average. $MPCE_{MRP}$ was lowest in Bagalkote, Gulbarga, Bidar, Dharwad and chitradurga districts (around 1035). Out of 29 districts 14 districts had the $MPCE_{MRP}$ below State average.

Bangalore Urban had highest urban $MPCE_{MRP}$ (**Rs.3990.83**) followed by Dakshina Kannada and lowest in Bidar district **(Rs.1290.96).** It can be seen from the statement-4.8.1 that two districts have urban $MPCE_{MRP}$ more than State average.

Graph-2: Monthly Percapita Expenditure (MRP) (in Rs.)



4.9 Modified Mixed Reference Period MPCE ($MPCE_{MMRP}$)

The Modified reference period MPCE($MPCE_{MMRP}$) is measured based on Household consumer expenditure of

schedule type-2 for the reference period of last 7 days for the items edible oil, fish and meat, vegetables, fruits, spices, beverages, refreshments, processed food, pan, tobacco and intoxicants, and for all other items, the reference periods used are same as in the case of Mixed reference period MPCE(MPCE$_{MRP}$).

4.9.1: District wise Rural and Urban MPCE$_{MMRP}$ in Karnataka (68th round-2011-12-Pooled-Maching-ratio)

(in Rs.)

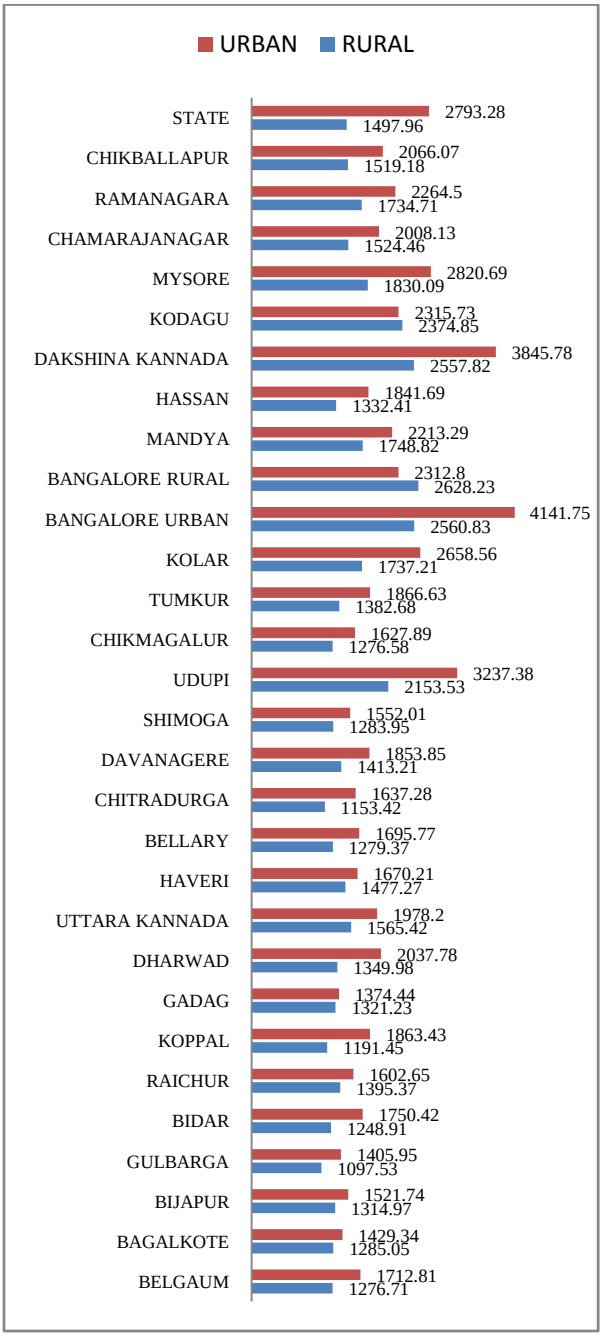
RAMANAGARA	1734.71	2264.5
CHIKBALLAPUR	1519.18	2066.07
STATE	**1497.96**	**2793.28**

District level estimates of MPCE$_{MMRP}$ are presented in statement-4.9.1. The average MPCE$_{MMRP}$ of Karnataka in 2011-12 was **Rs.1497.96** in rural and **Rs.2793.28** in urban. Thus the per capita expenditure level of urban population was nearly double that of rural population. Among the districts, in rural areas of the State, Bangalore Rural **(Rs.2628.23)** had highest and Gulbarga had the lowest **(Rs.1097.53)** MPCE$_{MMRP.}$ In urban areas, as usual MPCE$_{MMRP}$ was highest in Bangalore urban **(Rs.4141.75)** and lowest in Gadag**(Rs.1374.44).**

It can be seen from the statement 4.9.1 that in rural 17 districts and in urban 25 districts have MPCE$_{MMRP}$ less than state average.

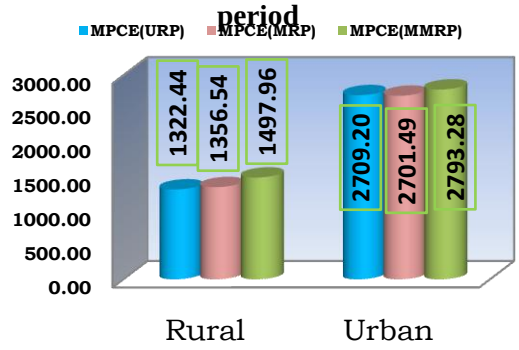
Graph-3:Monthly Percapita Expenditure (MMRP) (in Rs.)



4.10 Comparison of URP, MRP and MMRP estimates (MPCE)

Karnataka state rural and urban MPCE according three reference period have been presented in graph-3 for the purpose of comparison.

Graph -4 Average MPCE (in Rs) obtained using different reference period



It is clear from graph-3 that the state average MPCE based on MMRP was higher than URP and MRP both in rural and urban areas.

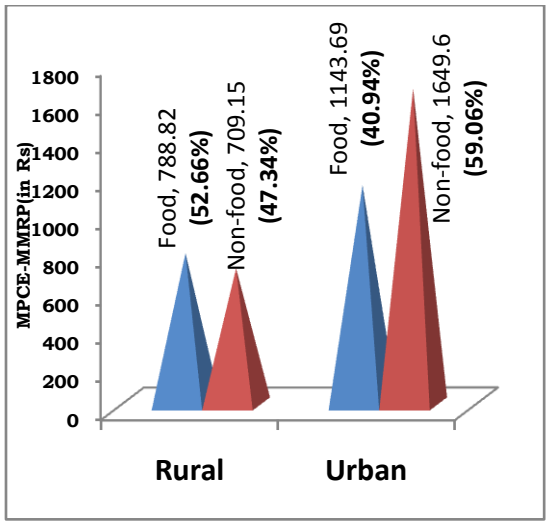
It is also observed that there was only slight variation between MPCE obtained by URP and MRP methods both in rural and urban areas of the State.

4.11 Expenditure pattern of Food and Non food. ($MPCE_{MMRP}$)

Estimates of per capita food expenditure and per capita non-food expenditure in rural and urban areas of Karnataka as per MMRP method is shown in the graph below. The district wise estimates are depicted in the detailed tables.

At state level the Per capita expenditure on food items under $MPCE_{MMRP}$ was Rs. 788.82(52.66%) and Rs.1143.69 (40.94%) and the per capita expenditure on non-food were Rs. 709.15(47.34%) and Rs.1649.60(59.06%) in rural and urban areas respectively. It is also seen that per capita food expenditure was higher than non-food expenditure in rural areas and reverse is the case in urban areas.

Graph-5: MPCE of food and non-food items in rural and urban areas of Karnataka



4.11.1: District wise $MPCE_{MMRP}$(in Rs.) on Food and Non-food in Rural areas of Karnataka State-Pooled-Matching-ratio

STATE	**788.82**	**52.66**	**709.15**	**47.34**

Statement depicts that, the expenditure on food is more than non-food in 22 districts except Raichur, Haveri, Kolar, Bangalore Urban, Bangalore Rural, Dakshina Kannada and Kodagu in rural area of Karnataka.

The expenditure on food is below the state average (788.82) in 17 districts and the expenditure on non-food is below the state average (709.15) in 19 districts.

4.11.2: District wise $MPCE_{MMRP}$ on Food and Non-food in Urban area of Karnataka State-Pooled-Matching-ratio

(in Rs)

DISTRICTS	FOOD	%	NON-FOOD	%
BELGAUM	853.52	49.83	859.32	50.17
BAGALKOTE	726.07	50.80	703.33	49.20

BANGALORE URBAN	1492.87	36.04	2648.87	63.96
BANGALORE RURAL	1084.11	46.87	1228.75	53.13
MANDYA	1025.52	46.34	1187.74	53.66
HASSAN	848.41	46.07	993.31	53.93
DAKSHINA KANNADA	1459.96	37.96	2385.82	62.04
KODAGU	1149.80	49.65	1165.99	50.35
MYSORE	1153.22	40.88	1667.47	59.12
CHAMARAJANAGAR	1024.13	51.00	984.09	49.00
RAMANAGARA	1124.81	49.67	1139.69	50.33
CHIKBALLAPUR	1102.04	53.34	963.99	46.66
STATE	**1143.69**	**40.94**	**1649.60**	**59.06**

From the above Statement, it can be seen that the expenditure on non-food is more than the expenditure on food in 19 districts, in urban areas of Karnataka.

4.12 Divergence between the estimates of Central and State samples.

Percentage difference between Central and state sample estimates of MPCE for URP, MRP and MMRP reference periods are depicted in the following table.

4.12.1 Divergence between Central and State sample estimates.

% Level	URP		MRP		MMRP	
	Rural	Urban	Rural	Urban	Rural	Urban
<=5%	8	3	7	6	5	4
5-10%	5	2	9	4	8	4
10-15%	2	7	7	7	4	9
15-20%	7	6	4	5	5	4
20-25%	2	4	1	3	3	2
25-30%	1	1	0	0	2	1
>30%	4	6	1	4	2	5
Total Districts	29	29	29	29	29	29

It is noticed that divergence between Central and State sample estimates in rural areas of 13 districts under $MPCE_{URP,}$ 16 districts under $MPCE_{MRP,}$ 13 districts under $MPCE_{MMRP}$ were below 10%. In urban areas 5, 10 and 8 districts shows below 10% divergence in $MPCE_{URP,}$ $MPCE_{MRP}$ and $MPCE_{MMRP}$ respectively. In rural areas more than 30% divergence observed in 4, 1, and 2 districts in URP, MRP and MMRP reference periods respectively. In case of urban areas, divergence is more than 30% in 6 districts under $MPCE_{URP}$, in 4 districts under $MPCE_{MRP}$ and in 5 districts under $MPCE_{MMRP}$.

4.13 RSE of Estimates

The lower the Relative Standard error(RSE) more precise is the data since it has proportionately less sampling variation around the mean. Distribution of districts by range of relative standard error(RSE) of $MPCE_{MMRP}$ of Central, State and Pooled sample estimates is presented in Statement 4.13.1.

4.13.1: Distribution of districts by range of (RSE) of MPCE by MMRP Method.

Range		<=5%	5-10%	10-15%	15-20%	20-25%	25-30%	>30%
Rural	Central	7	12	6	1	2	1	0
	State	5	17	5	1	0	0	1
	Pooled	10	14	3	2	0	0	0
Urban	Central	9	9	5	4	0	1	1
	State	5	18	4	1	1	0	0
	Pooled	12	10	5	1	1	0	0

RSE of estimates of MPCE in rural areas was found to be within 10% for 19 districts, within 10 to 20 percent for 7 districts and above 20% for three districts for Central sample.

For State samples, there were 22 districts for which RSE of rural MPCE was less than 10%, 6 districts found to be within 10 to 20 percent. Only in one district RSE was above 30%.

In the urban area, RSE were found to be more in Central samples, exceeded 25 percent in 2 districts. In the case of State sample, RSE were found to be less compared to rural areas and in one district RSE was found to be more than 20%. It may be noted that RSE of State estimates were better than central estimates.

From the distribution of districts by RSE level, it can be seen that the pooled estimate of MPCE have relatively lower RSE when compared to Central or State sample estimates. RSE of pooled estimate was found to be within 10 percent for 24 districts in rural & 22 districts in urban areas respectively, where as it exceeded 10 percent in 5 districts of rural area and 7 districts of urban area. It may be seen from the above table that the estimated RSE of MPCE at district level has shown improvement by pooling the central and state samples compared to either of them taken individually. Thus, it can be concluded that pooling the two samples increase precision of the MPCE estimate.

4.14 Estimates of per capita monthly consumption (quantity and value) of detailed items.

Per capita expenditure estimates are presented for 344 different items of consumption, including 142 items of food, 15 items of energy (fuel, light and household appliances), 28 items of clothing, bedding and footwear, 19 items of educational and medical expenses, 51 items of durable goods and 89 other items. These estimates are given separately for rural and urban areas.

In statements 1 & 2, the district wise estimates of detailed item level consumption of all items of food group for URP/MRP and MMRP are given. Similarly statements 3 to 5 gives the district wise estimates of detailed item level consumption of all items of non-food group for URP, MRP and MMRP. Statement 6 gives monthly per capita value of consumption at Sub-group level for URP, MRP and MMRP presented in chapter-8 are in enclosed CD.

The discussion here after in this Chapter is focused primarily on the MMRP estimates as it uses the reference periods recommended by the Expert Group on Non-Sampling Errors after suitable experimentation.

4.15 Shares of different food and non-food groups in consumption

4.15.1: Absolute and percentage break-up of $MPCE_{MMRP}$ by item group in 2011-12: Karnataka, Rural and Urban

Item Group	Monthly per capita Expenditure.(Rs.)		Percentage to Total MPCE	
	Rural	Urban	Rural	Urban
Cereal & cereal substitutes	147	181	9.8	6.5
Pulses & pulse products*	48	62	3.2	2.2
Milk & milk products	81	132	5.4	4.7
Edible oil	59	69	3.9	2.5
Egg fish & meat	90	119	6.0	4.3

Medical	89	108	6.0	3.9
Conveyance	76	205	5.1	7.3
Consumer services	68	168	4.5	6.0
Misc.goods, entertainment etc.	100	201	6.7	7.2
Rent	11	270	0.7	9.7
Taxes and cesses	8	36	0.5	1.3
Durable goods total	61	107	4.1	3.8
Non-Food Total	**709**	**1650**	**47.3**	**59.1**
TOTAL EXPENDITURE	**1498**	**2793**	**100.0**	**100.0**

Statement 4.15.1 gives absolute and percentage break-up of all Karnataka Rural and Urban $MPCE_{MMRP}$ in 2011-12, for broad groups of 9 food and 11 non-food items.

About 53% of the value of the average rural Karnataka's household consumption accounted for Food during 2011-12.This included 10% for Cereal & cereal substitutes, 9% on Beverages & refreshments etc., 6% on Egg , fish & meat, another 6% on Vegetables.

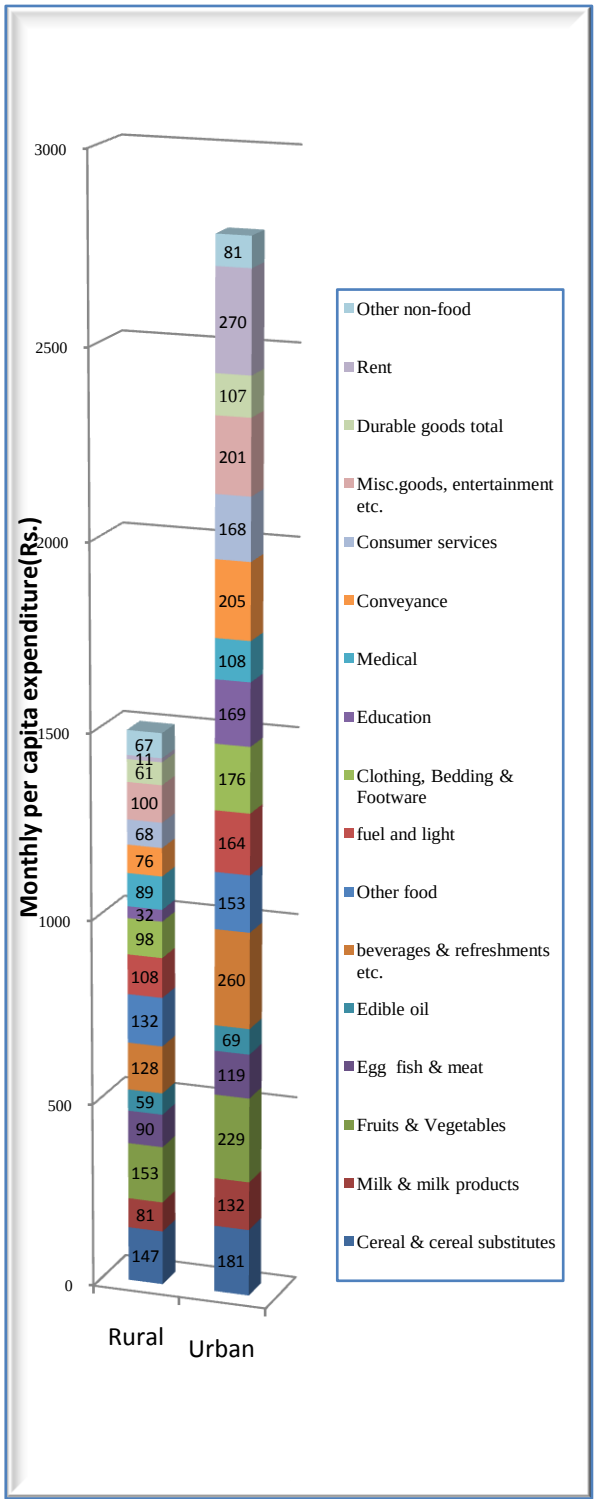
Among non-food item categories, Fuel and lighting accounted for about 7.2%, Misc. goods &, entertainment etc 6.7%. Clothing, bedding and foot ware for 6.6% , Medical expenses for about 6%, conveyance 5.1%, consumer services for 4.5%, consumer durables for 4.1% and education for 2.1%.

For urban Karnataka, 40.9% of the value of household consumption was accounted for by food, including 9.3% by beverages & refreshments etc., 6.5% by Cereal & cereal substitutes, 4.7% by Milk & milk products, while fish & meat and Fruits (fresh & Dry) each accounted for about 4.3%, and Vegetables3.9%.

Expenditure among non-food item categories, Rent accounted for nearly 10%, Conveyance 7.3%, Misc. goods, entertainment etc. about 7.2%, Clothing, Bedding & Foot ware about 6.3%, Education 6.1% and Consumer services 6% and fuel and lighting 5.9%.

While the percentage share of most of the food item groups in total consumption expenditure was higher in Rural Karnataka than in Urban Karnataka, beverages & refreshments etc. were exceptions. For non-food item groups, the share of Education, Conveyance, Consumer services, Misc. goods, entertainment etc. and Rent have higher share in urban Karnataka. The most noticeable rural-urban differences were in case of cereals(urban share: 6.5%, rural share: 9.8%), rent(urban:9.7%, rural:0.7%) and education (urban:6.1% , rural:2.1%)

Graph-6: MPCE of food and non-food items in rural and urban areas of Karnataka for MMRP method.



Statement 4.15.2 presents the average monthly per capita expenditure of broad groups of food and non-food items for a period of 30 days for different reference Periods.

4.15.2:Value of consumption (Rs.0.00) of broad groups of food and non-food items per person for a period of 30 days for different reference Period.

Imputed rent (urban only)	0.00	429.49	0.00	429.49	0.00	428.57

From the Statement 4.15.2, it can be observed that under food groups, for both rural and urban areas of Karnataka the MPCE towards the consumption of cereals was highest in URP/MRP method i.e., Rs.151.76 and Rs.186.93 respectively, and in MMRP method with Rs.146.67 and Rs.181.25.

On the non-food items under rural sector, the maximum monthly per capita expenditure was towards fuel and light with an expenditure of Rs.116.45 under URP/MRP method and Rs. 107.97 under MMRP. In urban areas of Karnataka, the maximum MPCE was towards rent in all methods URP, MRP, MMRP and was Rs. 288.94,288.94 and Rs.270.36 respectively.

4.15.3: Quantity and Value of monthly average consumption of different cereals per person.

(Pooled –Matching Ratio)

Items		Reference Period			
		URP		MMRP	
		Rural	Urban	Rural	Urban
rice	Qty(Kg.)	5.72	5.29	5.40	5.14
	Value(Rs.)	83.39	116.69	79.28	113.33
wheat	Qty(Kg.)	1.29	1.72	1.21	1.65
	Value(Rs.)	22.14	40.25	20.57	38.00

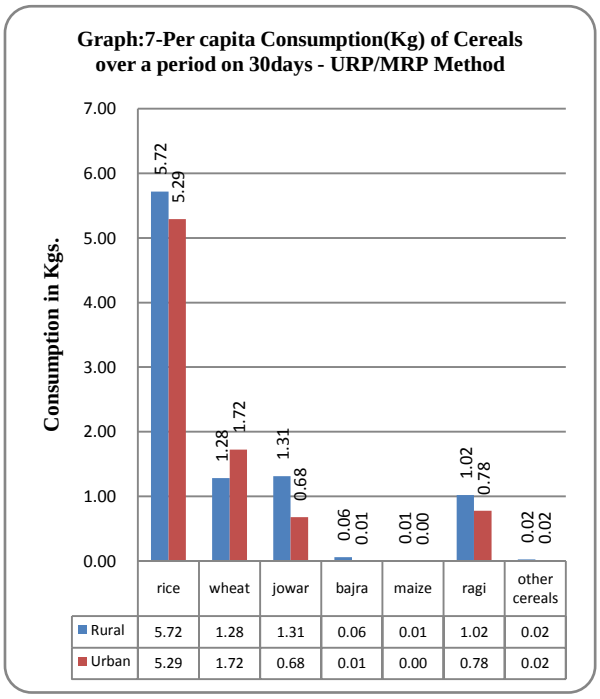
	Value(Rs.)	11.60	10.82	11.68	10.70
other cereals	Qty(Kg.)	0.02	0.02	0.03	0.02
	Value(Rs.)	0.40	0.49	0.55	0.62
total cereals	Qty(Kg.)	9.43	8.49	9.03	8.29
	Value(Rs.)	151.76	186.93	146.67	181.25

The above statement shows per capita quantity and value of monthly consumption of cereals, the stable food for per person of any community, for rural and urban areas by UPR and MMRP method. The total average monthly consumption of cereals per person in rural sector under URP/MRP was 9.43 Kgs. and under MMRP was 9.03Kgs. In Urban Karnataka it was 8.49 Kgs. and 8.29 Kgs. under URP/MRP and MMRP respectively.

The average monthly value of consumption of total cereals per person in Rural Karnataka was Rs.151.76 and Rs. 146.67 under URP/MRP and MMRP respectively, whereas for Urban Karnataka it works out to Rs.186.93 and Rs. 181.25 under URP/MRP and MMRP respectively. The person residing in the rural areas has got the benefit of getting the cereals at the subsidised price resulting in the less value in their monthly consumption expenditure. Here also, the average monthly value a person who pays more towards the maximum consumed cereals viz., rice was Rs.83.39/- and Rs.79.28/- under URP and MMRP in rural areas and Rs.116.69/- and Rs.113.33/- under URP and MMRP in urban areas respectively.



Estimates of per capita monthly consumption (quantity and value) and proportions of households incurring consumer expenditure on detailed items, based on the information collected under URP, MRP and MMRP for the 29 districts of the state, are presented in chapter-8 are in enclosed CD.

CHAPTER-5
Employment and Unemployment

5.1 Introduction

The Employment and Unemployment surveys of National sample survey are primary sources of data on various indicators of labour force and related characteristics of the population.

The basic objective of the employment & Unemployment survey is to get estimates of employment & Unemployment characteristics at National and State level. The statistical indicators on labour market are required for planning, policy and decision making at various levels both within the Government and outside. Some of the important uses of these indicators include a) by the Planning Commission in evolving employment strategy, b) by National Accounts Division in estimating gross domestic product using sector wise work force participation, and c) by various researchers to analyse the condition of the labour market.

This chapter deals with district level estimates of Employment& Unemployment derived from pooled Central and State sample data, measured in terms of the three basic approaches of usual status, current weekly status and current daily status. The detailed tables, related to Employment & Unemployment characteristics, derived from the pooled data are presented in the chapter.

5.2 Parameters Considered for Pooling

The following broad parameters were considered for pooling of Central and State sample data .

- Principal and subsidiary activity status combined(PS+SS).
- Weekly activity status(CWS).
- Daily activity status(CDS).

5.3 Testing Poolabilty of Central and State sample

Though the central and state samples are drawn independently following identical sample design with same concepts, definitions and instructions to collect the state sample data, different non-sampling errors might have been occurred due to different reasons like lack of adequate training to field staff and data processing staff, agency bias etc. As such they cannot be merged for generating pooled estimates without testing that the sample are realised from identical distribution function.

Chi-square Test:

Chi-square test was done over activity status for testing the poolability of central and state sample data for urban and rural. The district wise results of Chi-square test are given in **Tables 0.2(R)/(U)** in Chapter 6.

Statement-1 :Number of districts for which poolability rejected by the Chi-square test of LFPR(Labour Force Participation rate)

Type	Sector		
	Rural	Urban	Total Districts
Chi-Square test			
PS + SS	1	3	29
CWS	3	3	29
CDS	4	5	29

The above statement provides rejection of poolability of total labour force at district level at 1% critical error of Chi-square test for rural and urban in PS+SS, CWS and CDS.

From the statement we can see that the test suggests poolability of two sets of sample data for most of the districts. Test rejects poolability in Gulbarga, Chikmagalur, Udupi, Tumkur and Mandya districts of rural sector and Belgaum, Chikmagalore, Bangalore Urban, Udupi and Dakshina Kannada districts of urban sector.

5.4 Estimates of Activity Status.

Two alternate methods used in pooling the central and state sample data are

1.Weighting by matching ratio

2. Weighting by inverse of variance

(The methods explained in chapter-4)

Following are the key findings of employment and unemployment estimates, at district level, based on pooled data.

5.5 Labour Force Participation Rate(LFPR)

Labour Force refers to the population which supplies or offers to supply labour for pursuing economic activities for the production of goods and services and therefore, includes both 'employed' and 'unemployed' persons/person days. Labour Force Participation Rate (LFPR) is defined as the proportion of persons/person days in the labour-force to the total persons/person-days. These ratios are given in per 1000 of persons/person-days. The estimates of LFPR have been discussed here in usual status(PS+SS), CWS and CDS. The labour force indicators measured in PS+SS and CWS are in persons and in CDS in person-days.

5.5.1 Labour Force Participation Rate(LFPR) for all Persons (Derived from Pooled data).

Lobour Force Participation Rate						
District	PS+SS		CWS		CDS	
	R	U	R	U	R	U
BELGAUM	464	416	453	414	438	401

RAMANAGARA	498	389	487	389	481	384
CHIKBALLAPUR	421	383	421	383	415	343
ALL	**458**	**388**	**451**	**386**	**436**	**382**

According to the usual status(PS+SS), 46% of rural and 39% of urban population in Karnataka belonged to the labour force. It is observed from the above table that, Rural LFPR is higher than Urban at State level and in almost all districts in all the three approaches. Among the districts of Karnataka highest LFPR(PS+SS) estimated in Kolar(536) followed by Haveri(533), Udupi(512), Raichur(510) and Chamarajanagara(510) in rural areas and totally in 8 districts LFPR is above 50%.

In Urban areas estimated LFPR(PS+SS) is highest in Mandya(496) followed by Bagalkote(428), Bangalore Rural(426) and Bangalore Urban(420) and totally in 8 districts LFPR is above 40%. Estimated LFPR is lowest in shimoga(338) among rural and Gulbarga (290) among urban areas.

In CWS approach, LFPR is about 45% and 39% respectively in rural and urban areas, in Karnataka. Under the current weekly approach, LFPR varied from 338(Shimoga) to 533(Kolar) in rural areas, and from 290(Gulbarga) to 479(Mandya) in urban areas.

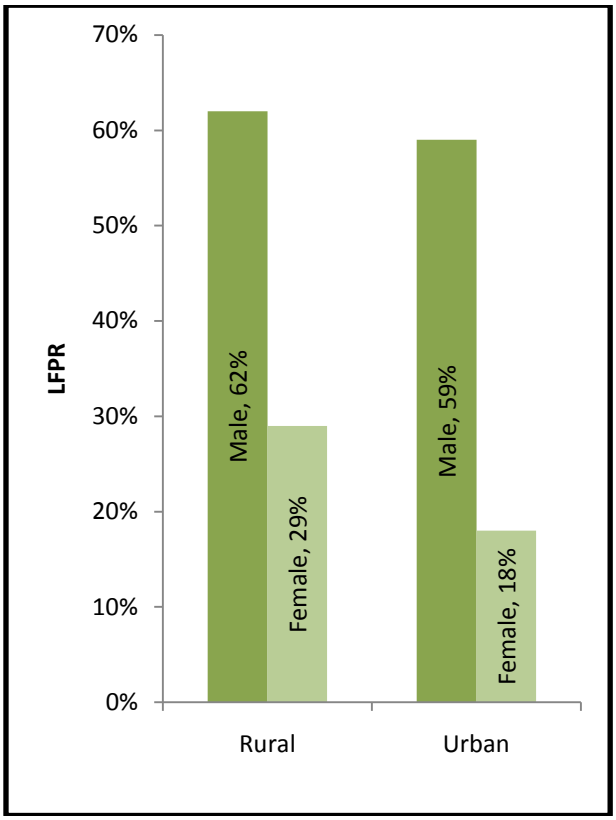
5.5.2 Gender gap in Labour Force(LFPR-PS+SS)

All over the world, to a great extent, pattern of labour participation is different for men & women and Karnataka is no exemption for this. Gender gap in estimate of labour force at state and district level is discussed in this section.

LFPR for females is significantly lower than LFPR for males in both rural and urban areas of Karnataka. The estimated proportion of male and female in labour force is shown in Graph-1. It is about 62% for rural male and 59% for urban male. For females, LFPR is 29% in rural areas and 18% in urban areas. The same pattern is observed at district level also.

It is also observed from the Graph that female LFRP in rural areas is higher than the female LFPR in urban areas.

Graph-1: Sector wise and Gender wise LFPR



Statement 5.5.2.1 provides a comparative picture of labour force of men and women at district level. The chart reveals that the gender disparity is prominent in LFPR. Shimoga recorded lowest Female LFPR i.e. 15 per cent in rural areas in comparison to 52 per cent in males and in urban areas Hassan recorded only 6 per cent females in comparison to 56 per cent males. Among the districts, in rural area, Bidar has shown less gap 53% in case of males and 34% in case of females .And in urban areas

Bijapur recorded the lowest gap i.e. 48% for male and 21% for female. Among the districts of Karnataka the gender disparity in labour force was highest in Chamarajanagara, in rural areas and in Hassan in urban areas.

5.5.2.1. District wise, Sector wise and Gender wise LFPR (Derived from Pooled data).

District	Rural		Urban	
	Male	Female	Male	Female
BELGAUM	577	359	563	275
BAGALKOTE	625	296	579	261
BIJAPUR	612	283	479	211
GULBARGA	642	338	459	85
BIDAR	534	335	569	171
RAICHUR	673	310	585	150
KOPPAL	530	163	574	184
GADAG	499	232	652	178
DHARWAD	692	325	577	119
UTTARA KANNADA	636	340	496	153
HAVERI	679	383	620	143
BELLARY	639	227	578	91
CHITRADURGA	710	306	544	94
DAVANAGERE	542	265	564	89
SHIMOGA	522	146	559	83
UDUPI	682	336	650	227
CHIKMAGALUR	617	248	600	134
TUMKUR	706	300	526	232
KOLAR	646	425	625	164
BANGALORE URBAN	613	181	630	190
BANGALORE RURAL	605	202	574	293
MANDYA	647	251	657	322
HASSAN	536	164	561	62
DAKSHINA KANNADA	658	348	531	215
KODAGU	595	333	589	208
MYSORE	598	311	550	191
CHAMARAJNAGAR	772	265	596	104
RAMANAGARA	645	323	563	199
CHIKBALLAPUR	637	189	576	176
KARNATAKA STATE	**621**	**289**	**588**	**176**

Analysing district level result, it is observed that the female LFPR in rural areas is higher than the female LFPR in urban areas in all districts except Koppal, Bangalore Rural, Bangalore Urban and Mandya where reverse trend is visible.

5.5.3 Divergence Between the Estimates of Central and State Samples(LFPR).

The absolute percentage difference between central and state sample (divergence) is worked out considering district as a domain for pooled estimates. From the statement 5.5.3.1 the divergence in LFPR between the two estimates is less than 10% in majority (22 in rural and 20 in urban) of districts out of 29 districts. For 3 districts each in rural and urban areas the divergence in LFPR between the two estimates is 10-15%, for 2 districts in rural areas the divergence is 15-20%, 2 districts each in urban areas fall in 20-25% and 25-30% divergence level and for 2 districts each in rural and urban areas the divergence level is above 30%.

5.5.3.1 Percentage Difference LFPR of Central and State Samples(Usual Status)

Level	Rural	Urban
<=5%	14	16
5-10%	8	4
10-15%	3	3
15-20%	2	0
20-25%	0	2
25-30%	0	2
>30%	2	2

5.5.4 RSE of Estimates

Distribution of districts by range of relative standard error(RSE) of LFPR of Central, State and Pooled sample estimates is presented in Statement 5.5.4.1. RSE of estimates of LFPR in rural and urban was

found to be within 10 per cent in most of the districts. Only one district in urban sample exceeded 30% RSE of estimates of LFPR.

From the distribution of districts by RSE level, it can be seen that the pooled estimate of LFPR have relatively lower RSE when compared to Central or Sate sample estimates. For both the sectors, in almost 86% of districts where RSE of pooled estimate is found to be within 10 percent. It may be seen from the statement that the estimated RSE of LFPR at district level has marginal improvement by pooling the Central and State samples compared to either of them. Thus we can say that the precision of estimate of LFPR increases by pooling.

5.5.4.1 Distribution of districts by range RSE of LFPR according to usual status.

Range		<=5%	5-10%	10-15%	15-20%	20-25%	25-30%	>30%
Rural	Central	7	14	4	2	2	0	0
	State	8	12	5	4	0	0	0
	Pooled	8	17	4	0	0	0	0
Urban	Central	11	12	4	0	2	0	0
	State	12	7	7	1	1	0	1
	Pooled	14	12	1	2	0	0	0

5.6 Worker Population Ratio(WPR)

The number of persons/person-days employed per thousand persons/person-days is referred to as work-force participation rates (WFPR) or Worker-population ratio(WPR). WPR provides estimation of employment situation of that country. This is also useful in knowing the proportion of population that is actively contributing to the production of goods and services in the economy.

According to the activity status group the pooled estimates generated for three different approaches viz. Usual status (PS+SS) with a reference period of one year (365 days) preceding to the date of survey, current weekly status(CWS) with a one week reference period preceding to the date of survey and current day status (CDS) based on the daily activity pursued during each day of the reference week.

District level estimates of WPR obtained from the pooled data according to usual status, current weekly status and current daily status are given in the Statement 5.6.1.WPR in the usual status (PS+SS) is 45 per cent and 38 per cent in rural and urban areas respectively. Expect in Koppal, Gadag, Bangalore Rural, Bangalore Urban and Mandya districts, rural WPR is higher than urban. Among the districts, the percentage of usually employed persons in rural areas are highest in Kolar (536) followed by Haveri(533), Raichur(510) and Tumkur(509). The urban WPR are highest in Mandya(491), Bagalkote(425), Bangalore Rural(423) and Bangalore Urban(414). Shimoga is estimated to have the lowest proportion of work force with nearly 34 per cent population are employed in rural and in urban areas lowest employment observed in Gulbarga i.e., 28 percent.

In CWS approach, WPR is slightly lower than the WPR obtained in usual status approach. WPR in CWS is nearly 44.6 per cent in rural areas and 37.8 percent in urban areas.

Estimates of WPR in CDS were further lower than those obtained in usual status. In CDS, WPR at the state level decreased to 43 percent in rural and 37 per cent in urban.

5.6.1 Worker Population Ratio for all persons-Pooled Sample

5.6.2 Gender disparity in WPR

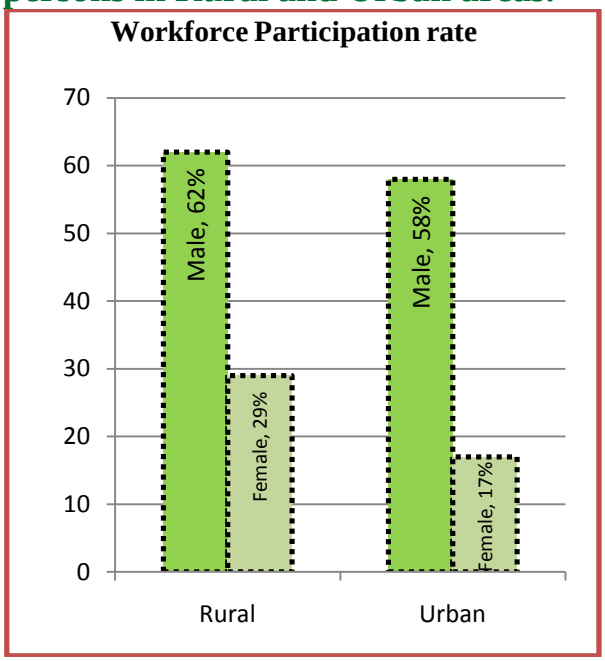
As in the case of WPR, district gender difference is observed both at the State and District level. Statement 5.6.2.1 displays the gender gap in WPR at the district and State levels, as per the usual status. From the chart it can be seen that in both rural and urban areas, female WPRs were considerably lower than male WPRs: while male WPR is nearly 62 per cent in rural areas, it is 29 per cent for females and urban male WPR is 58 per cent compared to 17 per cent of urban female WPR.

5.6.2.1 District wise estimate of WPR for male and female under usual status-Pooled Sample.

District Name	Rural		Urban	
	Male	Female	Male	Female
BELGAUM	577	359	557	256
BAGALKOTE	620	295	573	261
BIJAPUR	611	283	471	211
GULBARGA	637	337	447	83
BIDAR	529	335	568	169
RAICHUR	672	310	578	150
KOPPAL	529	162	574	184
GADAG	499	232	652	178
DHARWAD	692	325	577	117
UTTARA KANNADA	630	340	490	137
HAVERI	679	383	620	143
BELLARY	627	225	567	91
CHITRADURGA	692	306	544	76
DAVANAGERE	540	265	554	86
SHIMOGA	519	146	542	82
UDUPI	659	298	616	191
CHIKMAGALUR	610	236	592	131
TUMKUR	704	300	524	232
KOLAR	646	424	603	150
BANGALORE URBAN	613	181	623	187
BANGALORE RURAL	586	202	568	293
MANDYA	643	251	657	313
HASSAN	528	164	560	62
DAKSHINA KANNADA	658	348	511	213
KODAGU	595	333	582	192
MYSORE	588	308	541	191
CHAMARAJNAGAR	741	235	543	103
RAMANAGARA	642	323	561	185
CHIKBALLAPUR	624	189	576	176
ALL	**616**	**287**	**580**	**172**

Among the districts of Karnataka, Kolar(42%) reported higher female WPR than other districts in rural areas, followed by Haveri(38%) and Belgaum(36%). Mandya(31%), Bangalore Rural(29%) and Bagalkote(26%) reported high female WPR in urban areas. Lowest female WPR was reported in Shimoga 15% among rural areas and in Hassan 6% among urban areas.

Graph:2 WPR for male and female persons in Rural and Urban areas.



The above graph depicts that still there is a huge gap in female participation in urban areas.

5.6.3 Divergence between the estimates of Central and State Samples.

Distribution of districts by percentage difference in WPR between Central and State samples according to usual status is summarised in statement 5.6.3.1.

5.6.3.1 Percentage Difference of WPR of Central and State Samples (Usual Status)

Level	Rural	Urban
<=5%	14	15
5-10%	8	3
10-15%	3	3
15-20%	2	2
20-25%	0	1
25-30%	0	2
>30%	2	3

It is observed that most of the districts are under below 20% of divergence both in rural and urban areas. Above 30% divergence observed in 2 districts in rural area and 3 in urban areas.

5.6.4 RSE of Estimates

Distribution of districts by range of relative standard error(RSE) of WPR according to usual status of Central and State samples estimates is presented in statement 5.6.4.1

5.6.4.1 Distribution of districts by range RSE of WPR according to usual status.

Range		<=5%	5-10%	10-15%	15-20%	20-25%	25-30%	>30%
Rural	Central	9	13	3	2	2	0	0
	State	8	11	6	4	0	0	0
	Pooled	10	15	4	0	0	0	0
Urban	Central	10	11	5	1	2	0	0
	State	10	9	7	0	2	0	1
	Pooled	13	12	2	2	0	0	0

RSE of estimates of WPR in rural is found to be within 20% for both Central and State sample except for 2 districts in central sample but was within 25%. In urban sector, RSE of WPR was found to be within 15% for almost all districts in Central and State samples, except for 3 districts in central sample which lies within 15-25% and in State sample 2 districts lies within 20-25% and in one district RSE exceeded 30%.

From the distribution of districts by RSE level, it can be seen that the pooled estimate of WPR have relatively lower RSE

when compared to Central or State sample estimates. For majority of districts, RSE of pooled estimate was found to be within 10%. It may seen from the above chart that the estimated RSE of WPR at district level has marginal improvement by pooling the Central and State samples compared to either of them. Thus we can say that the precision of estimate of WPR increased by pooling.

5.7 Unemployment Rate

Persons are considered unemployed, if he/she is not working, but is either seeking or is available for work for relatively long time during the reference period.

Unemployment rate is defined as the number of unemployed persons(person-days in the CDS –approach) per thousand persons (person-days in the CDS –approach) in the labour force. This, in effect, gives the unutilised portion of Labour force.

According to the activity status group the pooled estimates generated for three different approaches viz. Usual status(PS+SS) with a reference period of one year (365 days) preceding to the date of survey. The second estimate is based on current weekly status(CWS) with a one week reference period preceding to the date of survey which indicate both chronic unemployment and seasonal unemployment. The third estimate based on current day status(CDS) of the daily activity pursued during each day of the reference week.

The unemployment rates, estimated from the pooled data according to usual status(PS+SS), CWS and CDS for each districts have been presented in Statement 5.7.1.

At the State level and in most of the districts, unemployed person-day (CDS) rates were substantially higher than the rates obtained on the basis of usual status approach or current weekly status approach, thereby indicating a high degree of seasonal and intra-seasonal unemployment.

As per CDS approach, the unemployment rates in both the rural and urban areas was nearly 3% each, as compared to 0.8% according to the usual status approach in the rural areas and 1.7% in urban areas. The corresponding rates in the CWS approach were 1.3% and 2% in rural and urban areas respectively.

5.7.1: District wise estimate of Unemployment rate

District Name	PS+SS		CWS		CDS	
	R	U	R	U	R	U
BELGAUM	0	31	0	36	0	38
BAGALKOTE	5	8	6	8	9	8

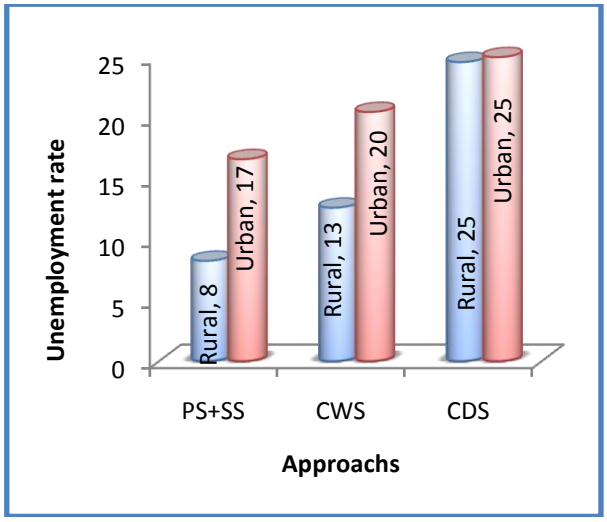
KARNATAKA STATE	**8**	**17**	**13**	**20**	**25**	**25**

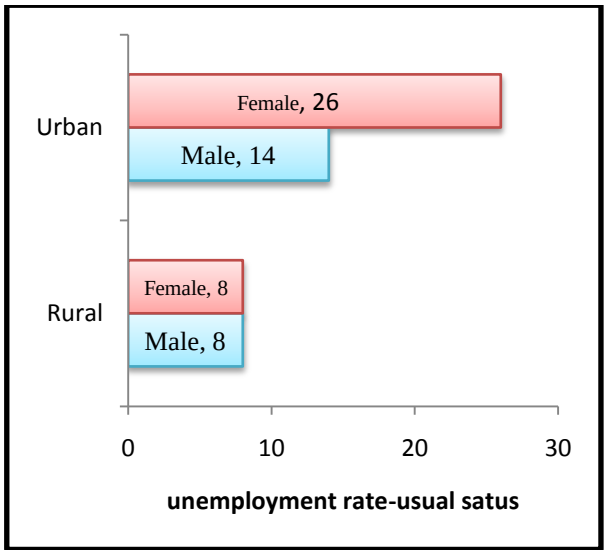
At the State level, the unemployment rate in urban areas were higher than those in the rural rates, except for CDS approach in

which the unemployment rates for rural and urban was same i.e 25 each.

Among the districts of Karnataka, according to usual status, both Udupi and Chamarajanagara districts reported highest unemployment rate i.e., 6% and 8% in rural and urban areas respectively. Same picture can be seen in these districts from the CWS & CDS approaches also.

Graph 3: Sector wise Unemployment rate for different approaches





5.8 Distribution of Employed by Category of Employment.

Persons employed are categorised into three broad groups according to their status of employment. These groups are (i) Self-employed (ii) regular wage/salaried and (iii) casual labour.

District and state level distribution of usually employed, by category of employment, is given in statement 5.8.1 and 5.8.2 for rural and urban sectors respectively.

5.8.1 Distribution of workers according to Employment status according to usual status-Rural

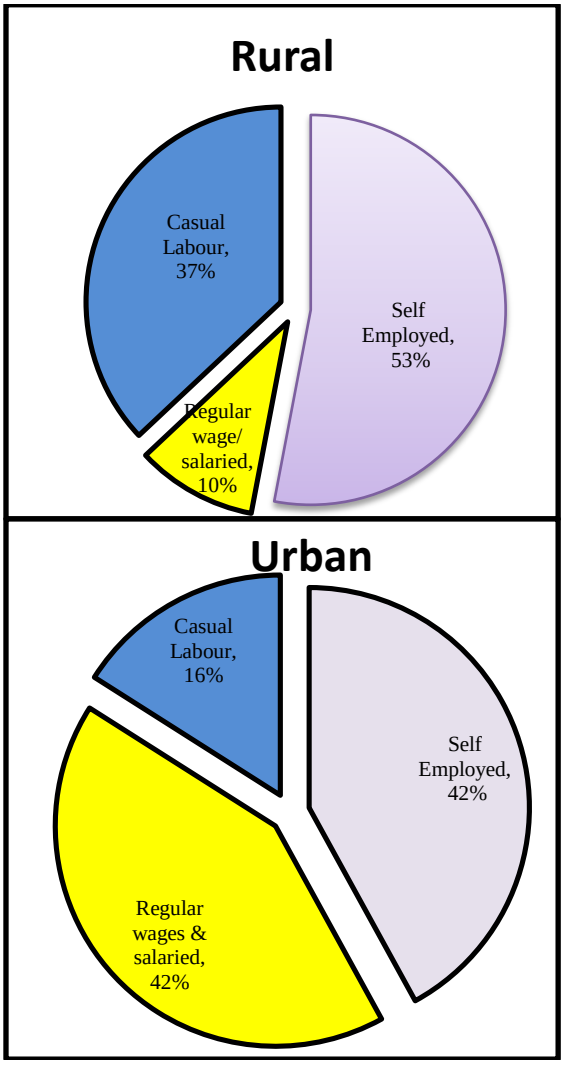
KARNATAKA STATE	448	393	159	337	483	180	424	414	162



From the Graph it can be seen that, at the State level self-employed had the dominant share 53% in usual status workforce, in the rural areas, while the share of casual labour was 37% and the remaining 10% of the workforce was regular wage/salaried. In the urban areas, share of Self-employed, regular wage/salaried and casual labour were 42%, 42% and 16% respectively.

In Karnataka, most of the regular wage/salaried job openings have been in urban areas where the proportion of regular wage/salaried employees is considerably higher compared to rural sector. It is observed that for males employed in usual principle status, in both rural and urban areas, the share of self employed was considerably higher than the remaining (rural-54%, urban-45%), whereas female workforce was higher for self employment in rural i.e., 48% and regular wage/salaried(48%) employment in urban.

Appendix-A

Sample Design and Estimation Procedure of NSS 68th Round

1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, started its sixty-eighth round from 1st July 2011. The survey will continue up to 30th June 2012.

1.2 **Subject Coverage:** The 68th round (July 2011-June 2012) of NSS is earmarked for surveys on 'Household Consumer Expenditure' and 'Employment and Unemployment'. The last survey on these subjects was conducted in 66th round of NSS (2009-10) which was the eighth quinquennial survey in the series on 'Household consumer expenditure' and 'Employment and Unemployment'. Current survey is similar to a quinquennial survey as far as subjects of enquiry, design, questionnaires and sample sizes are concerned.

2. Outline of Survey Programme

2.1 **Geographical coverage:** The survey covers the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

2.2 **Period of survey and work programme:** The period of survey is of one year duration starting on 1st July 2011 and ending on 30th June 2012. The survey period of this round is divided into four sub-rounds of three months' duration each as follows:

sub-round 1	:	July - September 2011
sub-round 2	:	October - December 2011
sub-round 3	:	January - March 2012
sub-round 4	:	April - June 2012

In each of these four sub-rounds equal number of sample villages/ blocks (FSUs) allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempt will be made to survey each of the FSUs during the sub-round to which it is allotted. *Because of the arduous field conditions, this restriction need not be strictly enforced in Andaman and Nicobar Islands, Lakshadweep and rural areas of Arunachal Pradesh and Nagaland.*

2.3 **Schedules of enquiry:** During this round, the following schedules of enquiry are being canvassed:

Schedule 0.0	:	list of households
Schedule 1.0	:	consumer expenditure
Schedule 10	:	employment and unemployment

Two types of Schedule 1.0 viz. Schedule Type 1 and Schedule Type 2 are being canvassed in this round. Schedule Type 1 and Type 2 are similar to those of NSS 66th round.

2.4 **Participation of States:** In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep are participating. The following is the matching pattern of the participating States/ UTs.

Nagaland (U)	: triple
Andhra Pradesh, J & K , Manipur , Delhi	: double
Maharashtra (U) & Kerala	: one and half
Gujarat	: half
Remaining States/ UTs	: equal

3 **Sample Design**

3.1 **Outline of sample design:** A stratified multi-stage design has been adopted for the 68th round survey. The first stage units (FSU) are the 2001 census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. The ultimate stage units (USU) are households in both the sectors. In case of large FSUs, one intermediate stage of sampling is the selection of two hamlet-groups (hgs)/ sub-blocks (sbs) from each rural/ urban FSU.

3.2 **Sampling Frame for First Stage Units:** *For the rural sector,* the list of 2001 census villages (henceforth the term 'village' would include also Panchayat wards for Kerala) constitutes the sampling frame. *For the urban sector,* the list of UFS blocks (2007-12) is considered as the sampling frame.

3.3 **Stratification:** Within each district of a State/ UT, generally speaking, two basic strata have been formed: i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district. However, within the urban areas of a district, if there are one or more towns with population 10 lakhs or more as per population census 2001 in a district, each of them forms a separate basic stratum and the remaining urban areas of the district are considered as another basic stratum.

3.4 **Sub-stratification:**

Rural sector r: If 'r' be the sample size allocated for a rural stratum, the number of sub-strata formed would be 'r/4'. The villages within a district as per frame were first arranged in ascending order of population. Then sub-strata 1 to 'r/4' have been demarcated in such a way that each sub-stratum comprised a group of villages of the arranged frame and have more or less equal population.

Urban sector: If 'u' be the sample size for an urban stratum, 'u/4' number of sub-strata have been formed. In case u/4 is more than 1, implying formation of 2 or more sub-strata, this is done by first arranging the towns in ascending order of total number of households in the town as per UFS phase 2007-12 and then arranging the IV units of each town and blocks within each IV unit in ascending order of their numbers. From this arranged frame of UFS blocks of all the towns/million plus city of a stratum, 'u/4' number of sub- strata formed in such a way that each sub-stratum has more or less equal number of households as per UFS 2007-12.

3.5 **Total sample size (FSUs):** 12784 FSUs have been allocated for the central sample at all-India level and 14772 FSUs have been allocated for state sample. Statewise allocation of sample FSUs has been given in Appendix Table-1.

3.6 **Allocation of total sample to States and UTs:** The total number of sample FSUs has allocated to the States and UTs in proportion to population as per census 2001 subject to a minimum sample allocation to each State/ UT. While doing so, the resource availability in terms of number of field investigators has been kept in view.

3.7 **Allocation of State/ UT level sample to rural and urban sectors:** State/ UT level sample size has been allocated between two sectors in proportion to population as per *census 2001* with double weightage to urban sector. However, if such weighted allocation resulted in too high sample size for the urban sector, the allocation for bigger states like Maharashtra, Tamil Nadu, etc. was restricted to that of the rural sector. A minimum of 16 FSUs (minimum 8 each for rural and urban sector separately) is allocated to each state/ UT.

3.8 **Allocation to strata/ sub-strata:** Within each sector of a State/ UT, the respective sample size has been allocated to the different strata/ sub-strata in proportion to the population as per census 2001. Allocations at stratum level are adjusted to multiples of 4 with a minimum sample size of 4. Allocation for each sub-stratum is 4. Equal number of samples has been allocated among the four sub-rounds.

3.9 **Selection of FSUs:**

For the rural sector, from each stratum/ sub-stratum, required number of sample villages has been selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001.

For the urban sector, UFS 2007-12 phase has been used for all towns and cities and FSUs have been selected from each stratum/sub-stratum by using Simple Random Sampling Without Replacement (SRSWOR).

Both rural and urban samples are to be drawn in the form of two independent sub-samples and equal number of samples have been allocated among the four sub rounds.

3.10 **Selection of hamlet-groups/ sub-blocks - important steps**

3.10.1 **Criterion for hamlet-group/ sub-block formation:** After identification of the boundaries of the FSU, it is first determined whether listing is to be done in the whole sample FSU or not. In case the population of the selected FSU is found to be 1200 or more, it has to be divided into a suitable number (say, D) of 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector by more or less equalising the population as stated below.

approximate present population of the sample FSU	no. of hg's/sb's to be formed
less than 1200 (no hamlet-groups/sub-blocks)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
……..and so on	

For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except four districts Dehradun (P), Nainital (P), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir and Idukki district of Kerala, the number of hamlet-groups are formed as follows:

approximate present population of the sample village		no. of hg's to be formed
less than 600	(no hamlet-groups)	1
600 to 899		3
900 to 1199		4
1200 to 1499		5
……..and so on		

3.10.2 **Formation and selection of hamlet-groups/ sub-blocks:** In case hamlet-groups/ sub-blocks are formed in the sample FSU, the same is done by more or less equalizing population.

Two hamlet-groups (hg)/ sub-blocks (sb) are selected from a large FSU wherever hamlet-groups/ sub-blocks have been formed in the following manner – one hg/ sb with maximum percentage share of population is always selected and termed as hg/ sb 1; one more hg/ sb is selected from the remaining hg's/ sb's by simple random sampling (SRS) and termed as hg/ sb 2. Listing and selection of the households is done independently in the two selected hamlet-groups/ sub-blocks. The FSUs without hg/ sb formation are treated as sample hg/ sb number 1. It is to be noted that if more than one hg/ sb have same maximum percentage share of population, the one among them which is listed first in block 4.2 of schedule 0.0 is treated as hg/ sb 1.

3.11 **Formation of second stage strata and allocation of households**

3.11.1 Two cut-off points 'A' and 'B' (in Rs.) have been determined from NSS 66th round data for each NSS state-region for urban areas in such a way that top 10% of the population have MPCE more than 'B' and bottom 30% of the population have MPCE less than A.

3.11.2: For both Schedule 1.0 and Schedule 10, households listed in the selected FSU/ hamlet-group/ sub-block are stratified into three second stage strata (SSS). Composition of the SSS and number of households to be surveyed from different SSS for each of the three schedules of enquiry namely, Schedule 1.0 (Type 1), Schedule 1.0 (Type 2) and Schedule 10 are as follows:

SSS	composition of SSS	number of households to be surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
	Rural		
SSS 1:	relatively affluent households	2	1
SSS 2:	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3:	other households	2	1
	Urban		
SSS 1:	households having MPCE of top 10% of urban population (MPCE > B)	2	1
SSS 2:	households having MPCE of middle 60% of urban population (A ≤ MPCE ≤ B)	4	2
SSS 3:	households having MPCE of bottom 30% of urban population (MPCE < A)	2	1

3.12 **Selection of households:** From each SSS the sample households for each of the schedules are selected by SRSWOR. If a household is selected for more than one schedule, only one schedule is canvassed in that household in the priority order of Schedule 1.0 (Type 1), Schedule 1.0 (Type 2) and Schedule 10 and in that case the household would be replaced for the other schedule. If a household is selected for Schedule 1.0 (Type 1) it is not selected for Schedule 1.0 (Type 2) or Schedule 10. Similarly, if a household is not selected for Schedule 1.0 (Type 1) but selected for Schedule 1.0 (Type 2) it is not selected for Schedule 10.

4. **Estimation Procedure**

4.1 **Notations:**

s = subscript for s-th stratum

t = subscript for t-th sub-stratum

m = subscript for sub-sample (m =1, 2)

i = subscript for i-th FSU [village (panchayat ward)/ block]

d = subscript for a hamlet-group/ sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/ hg/sb [j = 1, 2 or 3]

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/ sb's formed in the sample FSU

D* = 0 if D = 1

= (D – 1) for FSUs with D > 1

N = total number of FSUs in any urban sub-stratum

Z = total size of a rural sub-stratum (= sum of sizes for all the FSUs of a sub-stratum)

z = size of sample village used for selection.

n = number of sample FSUs surveyed including 'zero cases' but excluding casualty for a particular sub-sample and sub-stratum.

H = total number of households listed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics *x*, *y* under estimation

$\hat{X}$, $\hat{Y}$ = estimate of population total X, Y for the characteristics *x*, *y*

Under the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/ sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

4.2 **Formulae for Estimation of Aggregates for a particular sub-sample and stratum × sub-stratum:**

4.2.1 **Schedule 0.0:**

4.2.1.1 **Rural:**

(i) For estimating the number of households in a stratum × sub-stratum possessing a characteristic:

$$\hat{Y} = \frac{Z}{n}\sum_{i=1}^{n}\frac{1}{z_i}\left[y_{i1} + D_i^* \times y_{i2}\right]$$

where y_{i1} , y_{i2} are the total number of households possessing the characteristic *y* in hg's 1 & 2 of the i-th FSU respectively.

(ii) For estimating the number of villages in a stratum × sub-stratum possessing a characteristic:

$$\hat{Y} = \frac{Z}{n}\sum_{i=1}^{n}\frac{1}{z_i}y_i$$

where y_i is taken as 1 for sample villages possessing the characteristic and 0 otherwise.

4.2.1.2 **Urban:**

(i) For estimating the number of households in a stratum × sub-stratum possessing a characteristic:

$$\hat{Y} = \frac{N}{n}\sum_{i=1}^{n}\left[y_{i1} + D_i^* \times y_{i2}\right]$$

where y_{i1} and y_{i2} are the total number of households possessing the characteristic *y* belonging to sub-blocks 1 and 2 respectively, of the i-th FSU.

4.2.2 **Schedules 1.0 (Type 1) / 1.0 (Type 2) / 10:**

4.2.2.1 **Rural:**

(i) For j-th second stage stratum of a stratum × sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j}\sum_{i=1}^{n_j}\frac{1}{z_i}\left[\frac{H_{i1j}}{h_{i1j}}\sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}}\sum_{k=1}^{h_{i2j}} y_{i2jk}\right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum ($\hat{Y}_s$) will be obtained by adding sub-stratum level estimates ($\hat{Y}_{st}$).

4.2.2.2 **Urban**:

(i) For j-th second stage stratum of a stratum × sub-stratum:

$$\hat{Y}_j = \frac{N}{n_j}\sum_{i=1}^{n_j}\left[\frac{H_{i1j}}{h_{i1j}}\sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}}\sum_{k=1}^{h_{i2j}} y_{i2jk}\right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum ($\hat{Y}_s$) will be obtained by adding sub-stratum level estimates ($\hat{Y}_{st}$).

4.3 **Overall Estimate for Aggregates**:

Overall estimate for aggregates for a stratum ($\hat{Y}_s$) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2}\sum_{m=1}^{2}\hat{Y}_{sm}$$

4.4 **Overall Estimate of Aggregates at State/UT/all-India level**:

The overall estimate $\hat{Y}$ at the State/ UT/ all-India level is obtained by summing the stratum estimates $\hat{Y}_s$ over all strata belonging to the State/ UT/ all-India.

4.5 **Estimates of Ratios**:

Let $\hat{Y}$ and $\hat{X}$ be the overall estimates of the aggregates Y and X for two characteristics *y* and *x* respectively at the State/ UT/ all-India level.

Then the combined ratio estimate $(\hat{R})$ of the ratio $(R = \frac{Y}{X})$ will be obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$.

4.6 **Estimates of Error**: The estimated variances of the above estimates will be as follows:

4.6.1 **For aggregate** $\hat{Y}$:

$$\hat{Var}(\hat{Y}) = \sum_s \hat{Var}(\hat{Y}_s) \quad \text{where} \quad \hat{Var}(\hat{Y}_s) \text{ is given by}$$

$\hat{Var}\left(\hat{Y}_s\right) = \sum_t \frac{1}{4}\left(\hat{Y}_{st1} - \hat{Y}_{st2}\right)^2$, where $\hat{Y}_{st1}$ and $\hat{Y}_{st2}$ are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

4.6.2 **For ratio** $\hat{R}$:

$$\hat{MSE}(\hat{R}) = \frac{1}{4\hat{X}^2}\sum_s\sum_t\left[\left(\hat{Y}_{st1} - \hat{Y}_{st2}\right)^2 + \hat{R}^2\left(\hat{X}_{st1} - \hat{X}_{st2}\right)^2 - 2\hat{R}\left(\hat{Y}_{st1} - \hat{Y}_{st2}\right)\left(\hat{X}_{st1} - \hat{X}_{st2}\right)\right]$$

4.6.3 **Estimates of Relative Standard Error (RSE)**:

$$\hat{RSE}\left(\hat{Y}\right) = \frac{\sqrt{\hat{Var}\left(\hat{Y}\right)}}{\hat{Y}} \times 100$$

$$\hat{RSE}\left(\hat{R}\right) = \frac{\sqrt{\hat{MSE}\left(\hat{R}\right)}}{\hat{R}} \times 100$$

5. **Multipliers**:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a sub-sample and schedule type are given below:

sch type	sector	formula for multipliers	
		hg / sb 1	hg / sb 2
0.0	rural	$\frac{Z_{st}}{n_{stm}} \times \frac{1}{z_{stmi}}$	$\frac{Z_{st}}{n_{stm}} \times \frac{1}{z_{stmi}} \times D^{*}_{stmi}$
	Urban	$\frac{N_s}{n_{sm}}$	$\frac{N_s}{n_{sm}} D^{*}_{smi}$
1.0 (Type 1)/ 1.0 (Type 2)/ 10	rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D^{*}_{stmi} \times \frac{H_{stmi2j}}{h_{stmi2j}}$
	Urban	$\frac{N_s}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}}$,	$\frac{N_s}{n_{smj}} \times D^{*}_{smi} \times \frac{H_{smi2j}}{h_{smi2j}}$,
	(j = 1, 2, 3)		

Note: (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable may be used.

(ii) Multipliers have to be computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.

(iii) For estimating number of villages possessing a characteristic, D^{*}_{stmi} = 0 in the relevant multipliers and there will be only one multiplier for the village (see paragraph 6.2.1 in this context).

6. **Treatment for zero cases, casualty cases etc.**:

6.1 While counting the number of FSUs surveyed (n_{sm} or n_{stm}) in a stratum/sub-stratum, all the FSUs with survey codes 1 to 6 in schedule 0.0 will be considered. In addition, if no SSU is available in the frame for a particular schedule then also that FSU will be treated as surveyed in respect of that schedule. However, if the SSUs of a particular schedule type are available in the frame of the FSU but none of these could be surveyed then that FSU has to be treated as casualty and it will not be treated as surveyed in respect of that schedule.

6.2 *Casualty cases*: FSUs with survey code 7 as per schedule 0.0 are treated as casualties. In addition to this, an FSU, although surveyed, may have to be treated as casualty for a particular schedule type and a particular *second stage stratum* as given in the following para:

6.2.1 FSUs with survey codes 1 or 4 as per schedule 0.0 having number of households in the frame of j-th second stage stratum greater than 0 but number of households surveyed according to data file, considering both hg/sb together, as nil (i.e. $H_{i1j} + H_{i2j} > 0$ but $h_{i1j} + h_{i2j} = 0$) will be taken as casualties for j-th second stage stratum.

All the FSUs with survey codes 1 to 6 as per schedule 0.0 minus the number of casualties as identified above will be taken as the number of surveyed FSUs (n_{stmj}) for that (stratum/sub-stratum) ×(second stage stratum).

When casualty for j-th second stage stratum occurs for a particular hg/sb but not for the other hg/sb, the FSU will not be treated as casualty but some adjustments in the value of H for the other hg/sb will be done as follows:

(i) Suppose for hg/sb 1, $H_{i1j} > 0$ but $h_{i1j} = 0$ while for hg/sb 2, $H_{i2j} > 0$ and $h_{i2j} > 0$. In that case $D_i^* \times H_{i2j}$ will be replaced by $(H_{i1j} + D_i^* \times H_{i2j})$ in the formula for multiplier of hg/sb 2.

(ii) Suppose for hg/sb 1, $H_{i1j}>0$ and $h_{i1j} > 0$ while for hg/sb 2, $H_{i2j}>0$ but $h_{i2j}=0$. In that case H_{i1j} will be replaced by $(H_{i1j} + D_i^* \times H_{i2j})$ in the formula for multiplier of hg/sb 1.

It may be noted that n_{smj} or n_{stmj} would be same for hg/sb 1 & 2 of an FSU.

7. **Treatment in cases of void second-stage strata/sub-strata /strata/NSS region at FSU or household level**

7.1 A stratum/sub-stratum may be void because of the casualty of all the FSUs belonging to the stratum/sub-stratum. This may occur in one sub-sample or in both the sub-samples. If it relates to only one sub-sample, then estimate for the void stratum/sub-stratum may be replaced with the estimate as obtained from the other sub-sample for the same stratum/sub-stratum.

7.2 When a stratum/sub-stratum is void in both the sub-samples, the following procedure is recommended:

Case(I): Stratum/Sub-stratum void cases at FSU levels (i.e. all FSUs having survey code 7):

(i) If a rural sub-stratum is void then it may be merged with the other sub-stratum of the stratum.

(ii) If a rural/urban stratum (district) is void due to all FSUs being casualty, it may be excluded from the coverage of the survey. The state level estimates will be based on the estimates of districts for which estimates are available and remarks to that effect may be added in appropriate places.

Case (II): Stratum/Sub-stratum void case at second stage stratum level (i.e. all the FSUs are casualties for a particular second stage stratum):

An FSU may be a casualty for a particular *second stage stratum* although survey code is not 7. If all the FSUs of a stratum/sub-stratum become casualties in this manner for a particular *second stage stratum*, the stratum/sub-stratum will become void. In such cases, sub-strata will be merged with other sub-strata for all the second stage strata as in *Case (I) above.*

However, if whole district/stratum becomes void in this manner for a particular second stage stratum, adjustment for this type of stratum void case may be done according to the following guidelines.

The adjustment will be made involving other strata/sub-strata (within NSS region) of the State/U.T. Suppose A, B, C and D are the four strata in the State/UT/Region and stratum C is void for j-th *second stage stratum*. If $\hat{Y}_{aj}$, $\hat{Y}_{bj}$ and $\hat{Y}_{dj}$ are the aggregate estimates for the strata/sub-strata A, B and D respectively, then the estimate $\hat{Y}_{cj}$ for stratum/sub-stratum C may be obtained as $\left(\frac{\hat{Y}_{aj}+\hat{Y}_{bj}+\hat{Y}_{dj}}{Z_a+Z_b+Z_d}\times Z_c\right)$ where Z_a, Z_b, Z_c and Z_d are the sizes of strata A, B, C and D respectively.

8. **Reference to the values of Z_{st}, N_s, n_{st}, n_s, z_{sti}, D_{sti}, D^*_{sti}, D_{si}, D^*_{si}, H_{sti1j}, h_{sti1j}, H_{sti2j}, h_{sti2j}:**

(a) Values of $\mathbf{Z_{st}}$, $\mathbf{N_{st}}$ and allotted $\mathbf{n_{st}}$ for the whole round are given in appendix Table 2 for rural sector and in Table 3 for urban sector.

(b) $\mathbf{n_{st}}$ should not be taken from the tables. The values of $\mathbf{n_{stm}}$ for each sub-sample are to be obtained following the guidelines given in para 9 above. It includes uninhibited and zero cases but excludes casualty cases.

(c) The value of $\mathbf{z_{sti}}$ for the samples selected by PPS is to be taken from the column of sample list under the heading "frame population" for rural samples. Value of $\mathbf{D_{sti}}$ is to be taken from item 16 of block 1, sch 0.0. $\mathbf{D^*_{sti}}$ is to be calculated from the value of $\mathbf{D_{sti}}$.

(d) Values of $\mathbf{H_{sti1j}}$, $\mathbf{H_{sti2j}}$ are to be taken from col.(5), block 6 of sch 0.0 for respective hg/sb.

(e) The value of $\mathbf{h_{sti1j}}$ and $\mathbf{h_{sti2j}}$ should not be taken from col (9), block 6 of sch.0.0. The figures should be obtained by counting the number of households in the data file excluding the casualty households.

****
